Consolidated Report for Slow learners and Advanced learners

The institute caters to all its students irrespective of class, race ~~of~~ religion. However, as the student moves up in professional years, the formative and summative assessments help faculty grade them.

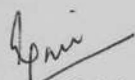

The regular formative assessment helps the faculty to identify the slow achievers. These slow achievers are provided constant support by the respective departments to help them learn at their own pace. The internal assessment improvement test provides another chance to these students in upgrading their marks. For supplementary batch remedial measures like extra classes, group study with advanced learners; academic and personal counseling, bilingual explanation for slow learners are carried out.

Special programs like mentorship are available for slow learners. On a feasible ratio, students are assigned to faculty members who monitor their progress, keep contact with their parents/guardian and counsel them from time to time. Such students are also facilitated with online /extra classes if they need.

The morale of advanced learners is boosted by felicitating them with awards every year. Advance learners may also avail various grants and exchange programs with national and international institutions with whom KGMU has MOUs. These are competitive and are based on academic progress records and extra-curricular participation.

Seminars, conferences, workshops, inter collegiate competitions and student felicitations are also organized by various departments.
