(57) Abstract:

The present invention relates to a system and method of selecting specific deviation correction prosthesis, based on existing clinical conditions. The four factors which play an important role in selection of Guidance prosthesis either Palatal ring (based on upper jaw) or Mandibular guide flange (based on lower jaw) are age, mouth opening, presence of teeth and amount of deviation.

(57) Abstract :

The present invention relates to a cheek retractor with adjustable suction tip holder and eye shield. The retractor has flexibility to adjust the position of suction ejector as per the site of operation and simultaneously protect the patient's eye. The device eliminates the need of a dental assistant to hold the suction in position while a dental procedure is being carried out and the arbitrary method of adapting the suction tip to the corner of patient's mouth, by providing an adjustable holder.

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program that included aerobic, strength, and flexibility exercises. The control group did not participate in any training program. Physical fitness was measured at the beginning and end of the 12-week period using a series of tests including a 1000-meter run, a 1-minute sit-up test, a 1-minute plank test, a 1-minute push-up test, a 1-minute side plank test, a 1-minute leg lift test, a 1-minute arm lift test, a 1-minute core stability test, a 1-minute balance test, and a 1-minute coordination test. The results showed that the experimental group had significantly higher scores than the control group in all tests at the end of the 12-week period. The findings suggest that a 12-week training program can improve the physical fitness of 10-year-old children.
