2- Clarification of research proposal entitled ***"Cellular fibroadenoma versus phyllodes tumors: A pre-operative diagnostic approach based on radiological and cytological features"*** submitted by Prof. Chanchal Rana, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no. 4081/21 dated 27th November, 2021.

Previous EC Comment	Response of PI
How will you get the patient consent?	Patient will be called and consent will be taken.
Discrepancy between mode of consent on IEC form.	Corrected EC form re-submitted with change highlighted in bold (Oral consent instead of written: corrected)
Sample size not mentioned	Mentioned in summary and highlighted in bold.
What radiological investigation will be included?	Mammography (Highlighted in bold in)
Will the histology and cytology slides of the patient re assessed or will previous documentation be used to extract data?	The histology and cytology slides will be reviewed and re assessed.
Recruitment of both the sexes been ticked in proforma.	Phyllodes neoplasm and fibroadenomas can be encountered in male patients as well, although rare. Hence if there will be any such cases encountered during retrospective analysis, those cases will be included.
Use of pre-existing/stored/left over samples has been ticked as No. Is this correct.	This study is based on morphological features which will be analyzed in slide review. Hence no stored or left over sample is required for any other analysis.
Use of biological material has been mentioned as NO.	Corrected proforma submitted

Lucknow vide letter no. SONC/133/22 dated 25th January, 2022.

Previous EC Comment	PI response
Comment 1: The research hypothesis should be properly defined in terms of the population parameter (proportion) and the direction of "treatment effect". If the direction of "effect" is known, it can be planned as a "Superior' trial. It will help in reducing the sample size.	In this study, we plan to compare the incidence (proportion) of skin necrosis using knife versus conventional electrocautery for elevating skin flaps during inguinal lymph node dissection. Our research hypothesis is that, in patients undergoing inguinal lymph node dissection, there will be a decrease in skin flap necrosis by using a knife compared to electrocautery for elevating skin flaps. Having said that, the **direction of effect is uncertain**. We think that a knife should be superior. However, there are no such studies done in the past, and evidence is lacking. Therefore, **a two-sided test** is chosen because it is unknown whether electrocautery or knife is superior.
Comment 2: The fundamentals	We have designed this RCT protocol in accordance with the CONSORT guidelines. We have tried to cover all the details. However, if there are any missing things, we will be delighted to

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	of performing RCT are not completely specified: Clinical Trial Registry, Statistical and methodological issues in RCT.	provide them. We will certainly plan to register this study with the clinical trial registry once we get the Institutional Ethics Committee approval, but before starting the trial. We have now elaborated on the statistical issues in the revised document.
	Comment 3: The randomization section is not clear. Is it stratified random sampling? If it is, which kind of stratification will be done: proportional, optimal or else?	Randomization will be stratified according to the site of primary cancer, where separate randomization lists will be generated for each primary cancer site. Blocked randomization will be used within each stratum (separate for each cancer site) to ensure that the random assignment is balanced over time using randomly selected block sizes of 4 and 6.
	Comment 4: Sample size calculations are not clear.	Sample size was calculated using PASS Software (PASS 2019 Power Analysis and Sample Size Software (2019). NCSS, LLC. Kaysville, Utah, USA, ncss.com/software/pass.) Here are the formulas from the documentation from PASS.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	What formula is used for calculating sample size?	**Z Test (or Chi-Square Test) with Continuity Correction (Pooled and Unpooled)** Frank Yates is credited with proposing a correction to the Pearson Chi-Square test for the lack of continuity in the binomial distribution. However, the correction was in common use when he proposed it in 1922. Although this test is often expressed directly as a Chi-Square statistic, it is expressed here as a *z* statistic so that it can be more easily used for one-sided hypothesis testing. Both *pooled* and *unpooled* versions of this test have been discussed in the statistical literature. The pooling refers to the way in which the standard error is estimated. In the pooled version, the two proportions are averaged, and only one proportion is used to estimate the standard error. In the unpooled version, the two proportions are used separately. The continuity corrected z-test is $$z = \frac{(\hat{p}_1 - \hat{p}_2) + \frac{F}{2}\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}{\hat{\sigma}_D}$$ where F is -1 for lower-tailed, 1 for upper-tailed, and both -1 and 1 for two-sided hypotheses. PASS Sample Size Software NCSS.com **Tests for Two Proportions** **Pooled Version** $$\hat{\sigma}_D = \sqrt{\hat{p}(1-\hat{p})\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}$$ $$\hat{p} = \frac{n_1\hat{p}_1 + n_2\hat{p}_2}{n_1 + n_2}$$ **Unpooled Version** $$\hat{\sigma}_D = \sqrt{\frac{\hat{p}_1(1-\hat{p}_1)}{n_1} + \frac{\hat{p}_2(1-\hat{p}_2)}{n_2}}$$ **Power** The power of this test is computed using the enumeration procedure described for the z-test above. For large samples, approximate results based on the normal approximation to the binomial are used.

The above comment forwarded to the P.I., Reply given by P.I. was reviewed by the <u>Primary reviewer.</u>

Recommendation of Primary reviewer:

Decision: Provisionally approved

Comment: Since only patient is blinded but not the investigator, this can be a single blind trial only.

Sl.No.	Previous EC Comment	PI response
1	Research hypothesis is not properly defined. It should be in terms of the parameters involving some proper measure of Occupational noise.	Research question has now been changed to: What is the effect of occupational noise on the truck drivers of Lucknow District?
2	The questionnaire is incomplete as this does not include the questions related to aims and objectives	
(i)	Evaluation of prevalence of NIHL	Pure tone audiometry is used to evaluate the prevalence of NIHL
(ii)	Assessment of the auditory and non – auditory effects	
	Auditory effect	Pure tone audiometry is used to assess the auditory effect
	Non – Auditory effect	Questions related to sleep, stress and Blood pressure have been included in the Questionnaire
(iii)	The remedial measures for mitigating effects of the occupational noise	Aims and Objectives (iii) has been modified as: To suggest if any, remedial measures for mitigating the effects of occupational noise.
3	How the reliability and validity of the instrument shall be done?	The instrument used for audiometry are pre-validated in the past and they are being used since long time in the Lucknow district and in the country as well.
4	Sample size calculation have to be in accordance with the research hypothesis, which is missing	Research question has now been changed to: What is the effect of occupational noise on the truck drivers of Lucknow District?

Site staff made site follow-up calls to subject on 4th December, 2021 around 10:30 AM. Subject's family member informed PI that the subject passed away on 15th November, 2021 at 6:00 AM. Subject's family member informed that the subject woke up in morning of that day and did his normal routine activities however after about one hour of waking up he collapsed suddenly. They had not taken the subject to any hospital and he died at home. Since there was no hospital visit or medical care given, there PI does not have any document related to his death and no autopsy was done.

Recommendation of Primary reviewer:
SAE (Death) is likely due to disease outcome [Acute MI (12/12/2019 F/W-Complete heart block –Temporary pacemaker implantation (TPI) – CART+STK- on 19-12-2019 + Heart failure (NYHA-II)] which lead to sudden cardiac death and is not due to intervention (Inj.Semaglutide 2.4 mg SC once a wk) as patient expired on 15th November ,2021. Causal relationship can not be established as subject passed away suddenly at home and there was no hospital visit or medical care given and therefore no hospital records are present and no autopsy was done..

ADR sub Committee Comment:

- PI to submitted Follow up forms, only outdoor tickets of the visits are enclosed in documents
- Casual relationship cannot be established.
- **ADR sub Committee Decision:** PI to submit a copy of death certificate which must have at least the district of residence, gender and age in years

Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	6. Dr. D.N. Upadhyaya -Member 7. Prof. Shally Awasthi -Member-Secretary, IEC
	Non-DCGI
I	Research Protocol entitled ***"A prospective, Randomized, open label, blinded endpoint (PROBE) study to evaluate DUAL antithrombotic therapy with dadigatran etexilate (110mg and 150 mgb.i.d.) plus clopidogel or ticagrelor vs. triple therapy strategy with warfarin (INR2.0-30) Plus Clopidogel or ticafrelor and asprin in patients with non valvular a trial fibrillation (NVAF) that have undergone a percutaneous coronary intervention (PCI) with stenting (RE-DUAL PCI)"*** submitted by Prof. Sharad Chandra, Department of Cardiology, K.G's Medical University, U.P. Lucknow vide letter no 1981/cardio/Res/21 dated 21st December, 2021. **Death** **Subject ID no. 110-40** **Subject Initial:** V-B **Gender:** M **Age:** 65 years- 13.10.2017 **Patient enrolled date:** 13th October, 2017 **Patient follow up under study:** Randomization visit, Month 1, Month 6, Month 12, Month 12, Month 24, every month 36. **Weight:** 63.0 KG **Height:** 158.0 cm **Subject History:** Site staff made a site follow-up call to subject on 14th December, 2021 around 03:15 PM. Subject's family member informed that the subject passed away on 19th November, 2020 at 08:00 PM. Subject's family member informed that the he was not feeling well from last 10 days. Subject had complaint of weakness, breathlessness for which he was taken to the hospital and expired there. He was not hospitalized hence no papers are available and autopsy was not done. ***Recommendation of Primary reviewer:*** SAE (Death) is most likely due to disease outcome (Old Acute Coronary Syndrome with Post Prandial Angina and Angina on Exertion –AOE-II CART) and not due to intervention (CART- dilation of a balloon over the retrograde wire and ante grade wiring & PTCA-S) which was without any complication and subject discharged in hemodynamically stable condition and completed 24 month follow-up successfully . On follow up call made on 14th December, 2021 ,subject's family member told that subject had complaint of weakness and breathlessness for which he was taken to hospital and

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	expired there on 19th November ,2020 (after more than 3 year of the intervention). Causal relationship cannot be established as subject passed away in hospital before hospitalization therefore no hospital records are available and no autopsy was done. **ADR Sub Committee Comment:** The documents is showing only up to 24th month visit. Then why call was made on 14th December, 2021 instead of December, 2020? Justification required by PI. Provide explanation for the same. **ADR Sub Committee Decision:** • Casual relationship cannot be established. ***Ref. code: 83rd ECM IIC/P5***
II a	ADR of research protocol no. ISCHEMIA: entitled ***"International study of comparative health effectiveness with Medical and Invasive approached"*** submitted by Prof. S.K. Dwivedi, Head, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 1983/Cardio/Res/2021 dated 21st December, 2022, 2011/Cardio/Res/22 dated 1st January, 2022 respectively. **<u>Death</u>** **Subject ID no. 091019-149** **Subject Initial:** S-L **Gender:** M **Age:** 75 years- 10-01-1946 **Patient enrolled date:** 27th November, 2017 **Patient follow up under study:** Randomization visit, Month 1.5, Month 3, Month 6, Month 12, Month 18, every month telephonic follow up till 5 year. **Weight:** 68.0 KG **Height:** 158.0 cm **Subject History:** Site person made a scheduled monthly follow-up call to subject 11th December, 2021 around 11:00, Subject's LAR informed us that subject passed away on 5th December, 2021 at 16:00 hrs, LAR told that on 4th December, 2021 subject developed hypoglycemia which was managed at home, then on 5th December, 2021 he developed uneasiness, sweating and foaming mouth for which he was taken to local hospital but could not reach

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

and died on the way to hospital. No documents are available and autopsy was not done.

Recommendation of Primary reviewer:

- The dates of randomization/enrolment mentioned in the documents are conflicting.
- The cover letter mentions that the patient was in 'Invasive arm' whereas the other documents record the patient to be in 'Conservative arm'.
- Length of follow up from registrations is mentioned as 5 years which should mean up to 2022, whereas it is mentioned that the remaining follow up was up till 2025.

ADR sub Committee Comment:

- As above

b **ADR sub Committee Decision:** Re-submit

Death

Subject ID no. 091019-139

Subject Initial: S-C-S

Gender: M

Age: 65 years- 03-12-1952
Patient enrolled date: 23rd October, 2017
Patient follow up under study: Randomization visit, Month 1.5, Month 3, Month 6, Month 12, Month 18, every month telephonic follow up till 5 year.

Weight: 72.0 KG

Height: 162.0 cm
Subject History:

Site person made a scheduled monthly follow up call to subject 20th December, 2021 at 15:00 hrs, Subject's LAR informed that subject passed away on 25th August, 2021 at around 14:39 hrs, LAR said that subject was feeling down from last few days and on 25th August, 2021 morning he had complaint of chest pain and his BP was low. Subject was not taken anywhere and he died at home. They called local physician at home for the evaluation. No documents are available and autopsy was not done.

Recommendation of Primary reviewer:

- Monthly follow up call to the subject was made on 20th December, 2021 when it was discovered that the subject had passed away on 25th August, 2021. This means that no monthly follow up call were made in September/October/November of the year 2021. This required clarification/explanation.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Patient was enrolled in October 2017 with an intended follow up for 5 years which should be 2022. The follow up visits remaining mentioned in the report is till 2025 which may be corrected. **ADR sub Committee Comment:** • As above **ADR sub Committee Decision:** • Resubmit along with Death Certificate ***Ref. code: 60th ECM IIA/P13***

Chairman, IEC

	research associate. It must be at par with ICMR norms • Many points in annexure 1 need to be filled up. For example to mention any benefits arising from this study • The type of study seems to be more of outcome of surgical comparison than epidemiological as indicated. Hence clinical category would be more appropriate. • Type of patients should be patients instead of volunteers as indicated • The patient information sheet is not attached • The above rectifications need to be submitted for re-consideration for ethical approval. **EC Comment:** As above **EC Decision:** Revise and re-submit. Give a tabular form of revisions done along with revised proposal. ***Ref. code: 114th ECM IIA/P16***
17.	Research proposal entitled "***Validation of online hearing assessment app (H3 Hearing Test)***" sponsored by Arth.ai/4500 Great America Parkway, Santa Clara, CA,USA submitted by Prof. Anupam Mishra, Department of ENT, Head Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no.580/ENT/22 dated 4th January, 2022. ***Recommendation of Primary reviewer:*** • Is this a new proposal or revised proposal? • Sample size: for correlation coefficient is different. Statistics expert can comment. • Inclusion Criteria: Patients of what disease will be included? • Is the study relevant still? • What is the scalability of this app based assessment: Different earphones, earwax and ambient noise. How do the investigators plan to account for these variables, which, in my opinion, can lead to erroneous results? • The app was extended free for 2 months: from 21 July, 2021. Time limit has expired. **EC Comment:** As above **EC Decision:** Revised & Re-submit. Give a tabular form of revisions done along with revised proposal. ***Dr. Anupam Mishra did not participate in the discussion and making decision.*** ***Ref. code: 114th ECM IIA/P17***
18.	Research proposal entitled "***Evaluation of clinic-pathological characteristics, prognostic factors and treatment outcomes in patients with Ewing sarcoma in children and young adults***" submitted by Dr. Nishant Verma, Additional Professor, Department of Pediatrics, King George's Medical University, U.P., Lucknow vide letter no.47/Ped/22 dated 8th January, 2022. ***Recommendation of Primary reviewer:*** • Can SR is co-PI? Make them student Investigator. • Vulnerable subjects: not checked

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• How and why will data be Completely anonymized/delinked • Why collaborating institute has no Co-PI? • Waiver form: Activity IS research! Consent this. • Exclusion criteria: First point needs clarity. What is the definition of definitive treatment? • Method: Why exclude patients who didn't complete 2 cycles? • EFS: What is disease abandonment? Explain • Categorical data in two groups: which 2 groups? • Continuous data in two groups: which 2 groups? • What are the 2 groups for Log-Rank test? • If data be Completely anonymized/delinked, why does data collection sheet have Hospital ID? **EC Comment:** • Give definitions and treatment protocol also. **EC Decision:** Revised & Re-submit. Give a tabular form of revisions done along with revised proposal. ***Ref. code: 114th ECM IIA/P18***
19.	Research proposal entitled "***Identification and characterization of novel molecular biomarkers with prospects of targeted drug therapy development in pediatric B-Cell acute lymphoblastic leukemia (ALL) with diverse genetic subgroups***" submitted by Dr. Nishant Verma, Additional Professor, Department of Pediatrics, King George's Medical University, U.P., Lucknow vide letter no.46/Ped/2022 dated 8th January, 2022. ***Recommendation of Primary reviewer:*** • Summary mentions: no funding, however, patient information sheet mentions: funding will be applied from Govt. Org or NGO • Study setting: Other participating institutions… which are these? • Study design: multi-centric: which all? • Sample size: last sentence: to achieve statistical significance…. What and how, which test? • Outcome measures: Do you think that this sample size is good enough to identify subgroups within this mixed bag and also find actionable solutions, despite the fact that WHO has been unable to do so, with possibly much larger sample size, genetic data, etc? • Statistical analysis: • Transcritomic and genomic data analysis needs specialized tests. • Categorical data in two groups: which 2 groups? • Continuous data in two groups: which 2 groups? • Means between more than 2 groups: specify groups • Ethical considerations: delinked?? Really?

Chairman, IEC

	site. • Insurance policy does not mention KGMU site. **Legal opinion** • In clause 20 of CTA the exclusive jurisdiction may be of Lucknow • In clause 26 the seat of Arbitration may be Lucknow. Moreover, it is highlighted that the MCIA rules are being referred for arbitration in this case. **EC Comment:** As above **EC Decision:** Revised & Re-submit. Give a tabular form of revisions done along with revised protocol. ***Ref. code: 114th ECMIIC/P1***
2.	Research protocol no. EA-CT-18-015 entitled "***A prospective, randomized, open label, multi-Centre, parallel arm, comparative study with blinded assessment to test the non-inferiority of liraglutide biosimilar with victoza® in patients with type 2 diabetes mellitus***" sponsored by M/s Ecron Acunova (Navitaz-CRO) submitted by Dr. Harish Gupta, Associate Professor, Department of Medicine, King George's Medical University, U.P., Lucknow, vide letter no.3229/MED/2021 dated 16th November, 2021. ***Recommendation of Primary reviewer:*** • Departmental Scientific Research Committee recommendation not attached. • IEC proforma not filled/attached • DCGI letter does mention KGMU in the list of approved sited. • Insurance certificate does not mention list of approve sites. • Informed consent does not have details of PI. • Patient information sheet not present. **Legal opinion** • There is no specific provision relating to force majeure in this agreement. This may be included to cover unforeseen situations in the future. • In Clause 14 of the Agreement the seat of Arbitration is Bangalore. This may be changed to Lucknow for convenience. **EC Comment:** As above **EC Decision:** Revised & Re-submit. Give a tabular form of revisions done along with revised protocol. ***Ref. code: 114th ECMIIC/P2***
3.	Research protocol no. CLNA043A12202 entitled "***A 5-year, randomized, doule-blind, placebo-controlled, multi-center study assessing the efficacy, safety, and tolerability of intra-articular regimens of LNA043 versus placebo in patients with symptomatic knee osteoarthritis (ONWARDS)***" sponsored by M/s Novartis Healthcare Pvt. Ltd submitted by Prof. R.N. Srivastava, Department of Orthopaedic Surgery, King George's Medical University, U.P., Lucknow, vide letter no.1410/OS/2021 dated 24th November, 2021. ***Recommendation of Primary reviewer:*** • No specific ethical issues. • No information about genetic testing has been provided in the consent [optional

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	genetic testing] and none in the protocol. Specify which…….. • Informed consent brochure / form in the submission part A and attached to the application by KGMU PI appear to be different. **Legal opinion** • There is no provision relating to Force Majeure in this agreement. This may be added to cover any unforeseen situation in the future. • There is no Dispute Resolution clause in the agreement. This may be added to ensure that arbitration is the primary mode of dispute resolution. • In Clause 26 of the Agreement the exclusive jurisdiction of Mumbai is referred to while this may be changed to Lucknow. **EC Comment:** As above **EC Decision:** Revised & Re-submit. Give a tabular form of revisions done along with revised protocol. ***Ref. code: 114th ECMIIC/P3***
4.	Research protocol no.CKJX839B12302 entitled ***"A randomized, double-blind, placebo-controlled, multicenter trial, assessing the impact of inclisiran on major adverse cardiovascular events in participants with established cardiovascular disease (VICTORION-2 PREVENT)"*** sponsored by M/s Novartis Healthcare Pvt. Ltd submitted by Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow, vide letter no.1963/Cardio/Res/21 dated 15th December, 2021. ***Recommendation of Primary reviewer:*** • The drug had been tried in multiple trials since 2017 in more than 3500 patients. The mortality rates in drug and placebo are controlled. No major SUSAR. • Did the drug showed efficacy? • The drug has been approved in EU in 2020 and in USA in December 2021. • Does it mean it is a postmarketing survey? What is the need of this study? • The study protocol mentions 2020. Is it a new proposal or resubmission? • Healthy volunteers - ?DCGI –YES • The insurance certificate is available but has expired on dec 2021.INR – 73638000 per tested person. • Information brochure and consent form are ok • 15000 participants – how much from this centre -30 to 40 • Sample sent abroad for uniformity • CTRI –Pending • 27 centers in India- IEC – submitted, all under review. • Someone with experience in evaluating drug trials should look at it. • There is consent for DNA testing. But the protocol does not mention which genetic testing will be done? Will some specific pharmacogenetic variants will be studied or whole exam or whole genome sequencing will be done? Each has different implications. Protocol and consent should be clear for this issue. Page 72 of the protocol mentions – 12.5.3- provides very limited information.

	Recommendation of Primary reviewer: • This is supposedly an ongoing project submitted for clearance of its modification this time. The submitted documents include investigator's brochure, ICF with its translation certification and other documents except: • CTRI registration • Clinical trial agreement including budget details • Insurance • Formal approval of DCGI on appropriate letter head (although email communication is submitted) • Despite my personal talk with the PI regarding clarification of the above lacunae, no papers have yet been submitted by him to me so far – hence if the above documents as evaluated during the previous ethics clearance do not stand appropriate for as of now, the PI needs to submit the above papers for reconsideration. **EC Decision:** Approved and noted ***Ref.code:90th ECMIIC/P2***
IV	**Additional Documents**
1-	Additional document of research protocol ***"Association of genetic variations of the TGF alpha and MTHFR genes with non syndromic cleft lip with or without cleft palate in North Indian population"*** submitted by Dr. Juhi Yadav, Department of Dentistry Government allopathic Medical College, Banda through under the guidance Dr. Veerendra Prasad, Department of Plastic Surgery, King George's Medical University, U.P., Lucknow vide letter no.26/22 dated 7th January, 2022. ***Recommendation of Primary reviewer:*** **Two Co-PIs have been added as follows:** • Dr. Divya Narain Upadhyaya (Addl. Prof. Plastic Surgery of KGMU) • Dr. Raj Kumar Mishra (Prof. & HOD, Plastic Surgery SIPS, Lucknow) • Can we add Co-PIs from Private Hospitals (Dr. R.K. Mishra) in our Research Projects? • To be discussed in EC Meeting before giving approval. **EC Decision:** Approved ***Ref. code: 110th ECM IIA/ P10***
V	**Extension**
1-	Extension of research proposal entitled ***"Nanostring nCounter based screening for molecular typing and target based therapeutics of TNBC in the Indian population"*** sponsored by C.S.I.R., New Delhi submitted by Dr. Neetu Singh, Associate Professor, Department of Molecular Biology Unit, Center for Advance Research, K.G's Medical University, U.P., Lucknow vide letter no. SONC/1148/2 dated 13th December, 2021. ***Recommendation of Primary reviewer:*** • Whether Prof. Vijay Kumar, Surgical Oncology, KGMU UP, Lucknow was the part of original Research Protocol? • In absence of PI (Dr. Neetu Singh) the approval of change or addition of PI & Co-PIs will have to be taken first from sponsoring authority (CSIR, New Delhi)?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Approval for extension can only be given after it has been approved by sponsoring authority and also submitting the Original protocol with sponsor documents. **EC Comment:** As above ***Ref. code: 93rd ECM II A/P5***

Previous PGTSC Comment	PI response
1. Clinical Trial Registry	With due respect, I, hereby, would like to bring to your kind attention that the study is an in-vitro study.
2. Research hypothesis is not properly defined.There are three main groups and two sub-groups within main	NULL HYPOTHESIS: There will be no difference in smear layer removal efficacy in deciduous teeth for all three irrigants observed - sodium hypochlorite and EDTA, Q-Mix , Morinda citrifolia and EDTA with variation in activation protocol within the groups.(changes have been made in null

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	groups.So basically ,there are five groups for comparison purposes.	hypothesis)
	3. The hypothesis should be defined in terms of the parameter of these parameters of these five groups.	NULL HYPOTHESIS: There will be no difference in smear layer removal efficacy in deciduous teeth for all three irrigants observed - sodium hypochlorite and EDTA, Q-Mix , Morinda citrifolia and EDTA with variation in activation protocol within the groups.(changes have been made in null hypothesis)
	4. The randomization procedure is to be explicitly written for sampling into five groups.	It is an in-vitro study.The teeth enrolled for the study will be randomly allocated in one of the three groups which later would be sub-divided into two sub-groups by **permuted block randomization method via computer generated sequence**.
	5. The sample size will depend on proper hypothesis at present, it is inappropriate	Sample size is calculated on the basis of variation in smear score in one of the study group using the formula , $n = k\frac{\left(z_\alpha + z_\beta\right)^2 \sigma^2}{d^2}$ Where σ = 0.71, The SD of smear score in QMix group (one of the study groups), d = 0.5 times mean (=1.367), the minimum mean difference consider to be clinically significant, k = 1.25, the design effect for adding subgroups, **(Ref. Dajana et. al.)** type I error α = 5% corresponding to 95% confidence level, type II error β = 10% for detecting results with 90% power of study, So the required sample size would be ***n* = 18 each group and n=9 in each sub-group.**
	6. Statistical analysis	Data will be analysed and expressed in mean (SD) for

(Shally Awasthi)

27- Clarification of research proposal entitled ***"Post ankylosis customized TMj replacement: A study"*** submitted by Dr. M. Haaris Khan, JRI, Department of Oral and Maxillofacial Surgery, King George's Medical University, U.P., Lucknow vide letter no.OMSD/731/21 dated 10th December, 2021.

Previous PGTSC Comment:

- The study has 1 Supervisor and 4 Co-Supervisors. Please reduce their number or define their UNIQUE roles.
- Clinical Trial section has been ticked. Please elaborate if this is a Clinical trial with a new drug or device. If yes, has CTRI registration been sought/will be sought?
- Subject number is 10 at one place and 300 at another.
- No sample calculation has been done.
- Prosthetic TMJ replacement by titanium implants is a standard procedure. What, then. Is the purpose of this study?
- For the patients taking part in the project, who will bear the cost of the customized 3D printed implant?

II-time-Reviewer opinion	PI response
The PI has refused to reduce the number of Co-PIs or define their unique roles. Assisting the surgery can't be a role of a Co-PI.	• The supervisor's (Prof. Shadab Mohammad) unique role is performing the said TMJ replacement surgery. • The co supervisor (Prof. Divya Mehrotra) unique role is helping in designing the artificial prosthesis on software and also perform the surgery. • The co supervisor(Prof RK Singh) unique role is to

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		check the clinical parameters which are being used for evaluation in this study. • The co supervisor (Prof Vibha Singh) unique role is to quality check and evaluate the design of the artificial prosthesis to avoid any bias. • The co supervisor(Dr Arunesh Kr. Tiwari) unique role is to screen and refer the TMJ ankylosis patients who report to trauma centre to OPD and also helps in diagnosing the type of TMJ ankylosis.
	Customised Titanium implants are a well accepted modality of care. The PI has not been able to define the Research question.	Customised Ti implants are a well accepted modality of care in developed countries. However in India, which is a developing country this particular modality of treatment has not been done and evaluated on the Indian population(especially north indian) due to lack of advanced infrastructure it requires. So we are evaluating its use in Indian population comparing it to the data in the literature.
	The cost of the 3D printed Customised implant for the purpose of the research project cannot be borne by the patient.	It is an observational study just to evaluate the assessment of functionality of replaced joint as compared to the available data in the literature. We have no control on allocation of the treatment modality offered to the patient. So no financial implication was imposed on the patient by the PI. As far as allocation of treatment modality for a patient is concerned, the patient has full control to opt for a particular treatment choices (one of which is customised TMJ replacement) amongst all the feasible choices provided to him/her routinely. The PI has just observed the clinical parameters of the patients who opted for the TMJ customised implant reconstruction choice.

Previous PGTSC Comments	PI response
Sample size given according to WHO reference but calculation not done.	Sample Size Calculation: (page no. 15,16 of the ethical clearance document) The following formula is used for sample size calculation $n= Z^2 \times p \times q/d^2$[1] n- Sample size required p=Prevalence q=1-p d=Difference to be detected- usually (margin of error) 5% Z=Statistic corresponding to level of confidence In a study (Tripathy et al., 2017), the prevalence of uncontrolled diabetes is 65%, assuming 80% power, 5% significance level with 95% confidence interval and margin error of 5%, the sample calculated will be 349.58 [2]. Z = 1.96, P= 0.65, q=0.35, d=0.05 So estimated sample size will be 350. But we are using the WHO document "How to investigate drug use in health facilities", according to which at least 600 encounters should be included in a cross-sectional survey, with a greater number if possible [3]. So we will take 600 patients of T2DM
Principal Investigator should be JR 1 (but in this protocol Chief Supervisor, Dr. Sanjay Khattri mentioned himself as PI and JR as Co-supervisor)	JR-1 is now assigned as the Principal Investigator and Prof. Sanjay Khattri as the Chief supervisor (page no. 3 of ethical clearance document).
Work distribution of JR 1 and Chief supervisor not mentioned.	Work distribution:(page no. 4 of ethical clearance document) 1. Dr. Arun Jakhar (JR 1): Data collection, data analysis and interpretation, thesis preparation. 2. Prof. Sanjay Khattri (Chief supervisor): Researchideaconception, Developmentdesignofmethodology, Dataanalysisinterpretation, final approval.

(Shally Awasthi)

		3. Prof.AmodKumar Sachan(Co-supervisor): Criticalrevisionofthesis and final approval 4. Prof.Kauser Usman(Co-supervisor):Supervision of clinical part ofthesis, dataacquisition, dataanalysis& interpretation, finalapproval. 5. Prof. K.K. Sawlani(Co-supervisor): Supervision of clinical part ofthesis, dataacquisition, dataanalysis& interpretation, finalapproval.
	Detailed methodology for Pharmacoeconomic evaluation of Anti-diabetic drugs not mentioned.	Detailed methodology: (page no. 16 of ethical clearance document) 1. The difference in the maximum and minimum price of the same drug manufactured by different pharmaceutical companies will be calculated. 2. Percentage cost variation will be found out by using the following formula: • Percentage cost variation = [(cost of highest price brand – cost of lowest price brand)/cost of lowest price brand] X 100 3. Prices of drugs will be calculated between following groups- controlled vs uncontrolled diabetes, with and without comorbidity, and stratification based on barthel index. 4. Following Predictors for cost will be evaluated: age, gender, BMI, HbA1C, FBG, comorbidity, barthel index in regression analysis.

Previous PGTSC Comments	PI Response
There is no research hypothesis	Despite guideline protocols for the surgical management of Traumatic Brain injury patients, various studies have shown major practice variations in the surgical management of severe traumatic brain injury at different centers. Since, the mortality rates in severe traumatic brain injury are quite high, hence various studies have been done aimed at reducing the mortality and morbidity of

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		such patients. In this study, we will be aiming at the determinants of mortality in patients with surgically evacuable lesion in severe traumatic brain injury including demography, clinical status (GCS score), radiological features and other associated co-morbid conditions. Moreover, we will be comparing the group of the patients of adverse outcomes (expired) with the survival group with similar clinical status (GCS score) and will focus on the impact of other relevant factors on the outcome of patients undergoing surgery. We will also evaluate the functional outcome of these patients at regular intervals using the GOS(E) score and study the progression of improvement or deterioration in such cases.
	In the absence of proper research hypothesis, sample size calculation and statistical analysis section would be in appropriate.	A flowchart representation of the study is being attached with this letter. The determinants of mortality will be tabulated and compared statistically using logistic regression analysis and their significance will be noted.

II-B	**IMR-Student**
1.	Research proposal entitled ***"Microbial contamination of surgical scrubs & mobile phones in the operating theatre- A pilot study"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Mr. Vaibhav Singh through his Mentor Dr. Sheetal Verma, Associate Professor, Department of Microbiology, King George's Medical University, U.P., Lucknow vide letter no. 1596/21 dated 13th December, 2021. ***Recommendation of Primary reviewer:*** • Sample size calculation not done (it is a Pilot study) **PGTSC Decision:** Approved ***Ref. code: VIII-PGTSC-II B IMR-S/P1***
2.	Research proposal entitled ***"An observational prospective analysis of suspected poisoning cases admitted in Medicine and Pediatrics Departments of a North-Indian Teaching Medical University"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Ms. Yashita Khulbe & Mr. Yash Chandani, both are MBBS students through their Mentor Dr. Raja Rupani, Additional Professor, Department of Forensic Medicine & Toxicology, King George's Medical University, U.P., Lucknow vide letter no. 533/FMT/21 dated 15th December, 2021. ***Recommendation of Primary reviewer:*** • As the patients will also be taken from Paediatric Deptt. –therefore Guardian and Child Assent form is needed apart from general ICF

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Cutting of written matter in SOP form is not required (Only ticks against the written matter in every point is permissible) **PGTSC Comment:** As above **PGTSC Decision:** Revise and re-submit. (Give a tabular form of revisions done along with revised proposal. ***Ref. code: VIII-PGTSC-II B IMR-S/P2***
3.	Research proposal entitled ***"CD44 expression in different histological grades of renal cell carcinoma and its clinicopatholgical correlation"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Ms. Varsha Singhal, MBBS 2019 through her Mentor Dr. Atin Singhai, Additional Professor, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no.4168/21 dated 21st December, 2021. ***Recommendation of Primary reviewer:*** • Justification for including HSRW Form along with ICF (E/H) • JRs cannot act as Co-PIs in Research Projects? **PGTSC Comment:** As above **PGTSC Decision:** Approval subject to modification ***Ref. code: VIII-PGTSC-II B IMR-S/P3***
4.	Research proposal entitled ***"Diphtheria: A prospective study of incidence of diphtheria in the emergency unit of the department of Pediatrics in a hospital of a medical University of Northern India"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Mr. Shubhajeet Roy & Ms. Aditi Singh both are MBBS students through their Mentor Dr. Sciddhartha Koonwar, Prof. Jr. Grade, Department of Paediatrics, King George's Medical University, U.P., Lucknow vide letter no.64/Ped/2022 dated 10th January, 2022. ***Recommendation of Primary reviewer:*** • Exact sample size and its calculation not done • PI has made several cuts of contents in SOP Form –which is not required therefore Revised SOP Form should be submitted with only necessary Ticks • Title has been altered in Protocol and ICF by erasing the few words by whitener which is not permissible. Please give exact title. • Child Assent form not submitted along with ICF **PGTSC Comment:** As above **PGTSC Decision:** Revise and re-submit. (Give a tabular form of revisions done along with revised proposal. ***Ref. code: VIII-PGTSC-II B IMR-S/P4***
5.	Research proposal entitled ***"Study of single nucleotide polymorphism in MGMT gene promoter region and correlation with MGMT methylation status and prognosis in glioblastoma"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Dr. Krachi Agarwal, JR-I through her Mentor Dr.Shivanjali Raghuvanshi, Associate

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Professor, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no.17 dated 6th January, 2022. ***Recommendation of Primary reviewer:*** • Total 6 Co-PIs , 2 from Pathology and 2 from Neurosurgery with same role, please reduce the number of Co-PIs or justify the same and correct the name of Department of Prof. B K Ojha (HOD , Neurosurgery Deptt.). • Age specificity not mentioned in Inclusion criteria • Revise SOP form as not filled properly leaving parts of the question no.-5 ,8 & 10 unanswered. **PGTSC Comment:** As above **PGTSC Decision:** Revise and re-submit. (Give a tabular form of revisions done along with revised proposal. ***Ref. code: VIII-PGTSC-II B IMR-R/P5***
6.	Research proposal entitled ***"Analysis and relevance of single or combination mutations of BRAF, TERT and NRAS genes and their clinic-pathologic relationship in papillary thyroid carcinoma: A study using sanger sequencing"*** sponsored by Research Cell, KGMU UP, Lucknow submitted by Dr. Isha Makkar, JR-I through her Mentor Dr. Chanchal Rana, Associate Professor, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no.26 dated 10th January, 2022. ***Recommendation of Primary reviewer:*** • Justify Co-PI numbers and their roles or reduce the Co-PIs-Total 6 (2 from Pathology and 3 from Endocrine Surgery with almost same role) • Study design mentioned is different in Protocol and ICF (informed consent form) • No any sample has been mentioned in SOP Form. If it is retrospective cross sectional observational study with 2 year follow up then why PI mentioned that histopathological processing ,reporting and molecular analysis will be done by Sanger sequencing. • Details of Sanger sequencing with reference has not been mentioned in methodology. **PGTSC Comment:** As above **PGTSC Decision:** Revise and re-submit. (Give a tabular form of revisions done along with revised proposal. ***Ref. code: VIII-PGTSC-II B IMR-R/P6***

Chairman, IEC

King George's Medical University, U.P., Lucknow

Institutional Ethics Committee Meeting,

OFFICE OF THE ETHICS COMMITTEE

Administrative Block

Minutes of 115th IEC Meeting virtually held on 2nd April, 2022

(Registration No.: ECR/262/Inst/UP/2013/RR-19)

Minutes of 115th "Institutional Ethics Committee" Meeting *virtually* held on 2nd April, 2022 from 10.30 AM.

The following Members were present in the Meeting:-

1. Prof. Alok Dhawan -Chairman
2. Prof. G.G. Agarwal -Member
3. Prof. Shubha R Phadke -Member
4. Mrs. Vasundhara Kumar -Member
5. Mrs. Akansha Dubey -Member
6. Mr. Ujjawal Krishna -Member
7. Dr. Akash Agarwal -Member
8. Dr. K.K. Yadav -Member
9. Prof. A.A. Mahdi -Member
10. Prof. Rajendra Nath -Member
11. Prof. Anupam Mishra -Member
12. Prof. Anita Rani Singh - Member
13. Dr. D.N. Upadhyaya -Member
14. Dr. Shally Awasthi -Member-Secretary, IEC

I-A	Action Taken
1-	Clarification of research proposal entitled "***Photobiostimulation (Low Level Iaser Therapy) as a non-invasive therapeutic adjunct for non-surgical management of periapical bone defects during COVID-19 pandemic***" sponsored by UPCST Lucknow submitted by Dr. Rhythm, Prof. Jr. Grade, Department of Conservative Dentistry & Endodontics, K.G's Medical University, U.P., Lucknow vide letter no.428/2020dated 29th December, 2020. **Previous EC Comment:** • Sponsor Information: UPCST is State, not Institutional • Budget is not mentioned-Needs itemized budget • Needs patient information sheet/brochure in English and Hindi • Needs Case Report Form. • Hypothesis: need to differentiate between a research hypothesis and null hypothesis.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Study design: What type of randomization and why? • Will RCT be done in all patients? If yes- mention it, if no: correct consent form. • What type of statistics will be used? Please mention detailed statistical plan. • What are the endpoints and how will they be assessed / measured? • Sample size: explain calculation, effect size and baseline efficacy. • Consent form: There is a risk of using non standard treatment, should be mentioned. ***The above comment forwarded to the P.I., Reply has given by P.I. was reviewed by PR.*** ***Recommendation of Primary reviewer:-*** • Provisionally approved **EC Decision:** Approved ***Ref. code: 107th ECM IIA/P7***
2-	Clarification of research proposal entitled "***Formulation, optimization and evaluation of apigenin and cardamom essential oil based emulgel for mitigation of oral submucous fibrosis***" sponsored by ICMR submitted by Ms. Sarita Pal, Ph.D Scholar 2019, under the guidance Dr. N.P. Yadav & Co-PI U.S. Pal, Department of Oral and Maxillofacial Surgery, FODS, K.G's Medical University, U.P., Lucknow vide letter no. 594/OMFS/21 dated 8th October, 2021. **Previous EC Comment:** • 1-Section 5: This project is an in-vitro study: what is the need for subjects? • 2. Section 5: Many vulnerable subjects have been ticked: why? • Section 6: Privacy statement: not checked • Section 7: Organs and body fluids are being used: wrongly checked. • Section 8: All studies involving patient recruitment need a patient information sheet. • Section 8: Who administers the consent? • Section 10: Give details of interim data analysis points. • Biopsy is an invasive procedure: can have complications, can't be risk free. • Consent form and patient information sheet should be separate. • Why will oral cancer cell lines be used? The study is of OSMF, not cancer. • Objectives: Procurement of buccal mucosa cannot be an objective, at least for this study. • Please provide the Ayurvedic Text which tells about areca nut causing OSF. • Please provide itemized budget. ***The above comment forwarded to the P.I., Reply has given by P.I. was reviewed by Primary reviewer.*** ***The <u>second Recommendation</u> of Primary reviewer:*** • Budget not mentioned • Risk is not reasonable, why do the study? • Biopsy is an invasive procedure with discomfort, risk of complications: need to

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	have a compensation policy. • KGMU should have its own PI answer researcher outside KGMU will not be interaction with patients. • Right to participation (Consent form): tissue sample is patient's property and rights can't be waived off. • Outcome measures are not in sync with aim/objectives. ***The above comment forwarded to the P.I., Reply received by PI on 31st March, 2022 was forwarded to PR vide this office letter no. 2382/Ethics/22 dated 31st March, 2022.*** **EC Comment:** • List of queries raised previously and their clarifications have not been attached. Please ask the researched to do the needful. ***Ref. code: 107th ECM II B-Ph.D/P1***
3-	Clarification of research proposal entitled "***To determine the role of RBP 4 and retinoic acid levels as pediatric acute liver failure prognostic biomarker***" sponsored by CSIR submitted by Dr. Sanjeev Kumar Verma, Associate Professor, Department of Pediatrics, King George's Medical University U.P., Lucknow vide letter no.1151/Ped/2021 dated 13th May, 2021. **Previous EC Comment:** • The aim is to study the biomarker as a prognostic tool. However, nowhere in the proposal, any reference to the prognosis of ALF has been made. • Why include a control group in this study? • No statistical plan has been given. • Flowchart is incomplete • Inclusion criteria: How will the fact that 'PT-INR >2 is of hepatic origin' will be ascertained? • Sec 5: Why include "institutionalized" subjects? • Sec 6: Why use direct identifiers? • Sec 7 is left blank, needs to be completed. • Sec10: If risk is not reasonable to anticipated benefit, why do the study? • Blank fields in benefit section need to be filled. ***The above comment forwarded to the P.I., Reply has given by P.I. was reviewed by Primary reviewer.*** ***Second Recommendation of Primary reviewer:*** • If diagnosis of hepatic origin of deranged PT-INR cannot be made before admin 2 doses of Vit K, patient cannot be included in study before day 3. Day 1 sample becomes problematic. • Why control group? • Budget: Itemized budget is needed

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

- Statistical analysis:
- What results will be analysed I mean +/-SD
- Which groups will be compared?
- What is the role of predictive markers, what will they predict, how will the prediction be established and why do you want to study "PREDICTIVE markers" when the study title says "PROGNOSTIC markers"

The above comment forwarded to the P.I., Reply has given by P.I. was reviewed by PR. Recommendation of Primary reviewer:-

- Provisionally approved

EC Decision: Approved

Ref. code: 109th ECM IIA/P2

4. Clarification of research proposal entitled "***Inter-observer variation in assessing depth of invasion, pattern of invasion and extranodal extension as histological parameters in oral squamous cell carcinoma(OSCC)***" submitted by Dr. Sumaira Qayooom, Associate Professor, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no. 369 dated 23rd March, 2022.

Sl. No.	Previous EC Comment	PI response
1.	This is a retrospective study. The resected specimen has already been collected.	In material and methods mentioned "already received "in the dept. of pathology.
2.	The variables and associated parameters have already been measured.	During routine reporting the mentioned variables have been measured by single pathologist. In this study more than one pathologist will review the same slides and remeasure the said parameters.
3.	The study proposes to assess the new variables. How shall this be done reliably and precisely? This is a real challenge.	This is not the problem as all these parameters can be assessed from already prepared slides and we do measure these variables routinely.
4.	The assessment is to be done by 5 pathologists. There will be 10 possible kappa coefficients. A	The number of observers has been reduced to 4. One-way

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		statistical test has to be performed on equality of these 10 coefficients. If the hypothesis is rejected, how these coefficients will be interpreted.	random effects ANOVA model will be fitted to test the equality of these 8 coefficients. Post -hoc analysis will also be done, if hypothesis is rejected. We can also go for Fleiss Kappa instead of Cohen Kappa.
	5.	The calculation of kappa coefficients shall depend on the type of data (categorical, ordinal or ratio). The sample size calculation and statistical analysis will depend on it .	In this study the outcome variable is continuous, ordinal and Nominal. Continuous data will be analyzed by ICC and ordinal/nominal data by Fleiss Kappa. Necessary Changes done in material/ methods section.
	6.	There are some paradoxes associated with Kappa associated with Kappa (i) prevalence effect (ii) bias effect. If these are present, then prevalence and bias adjusted kappa (PABAK) has to be calculated.	We don't expect bias effect in this study as all the observers will be blind to the clinical details, observation findings of other observers. However, the test analysis regrading prevalence effect and bias effect will also be done. If present, adjusted kappa (PABAK) will be calculated.
	7.	Involve statistician as co-investigator	Statistician added. Revised list of co- investigators attached.
	8.	Remove SR as co-investigator	SR removed. Revised list of co- investigators attached
	9.	The calculation of kappa coefficients shall depend on the type of data (categorical, ordinal or ratio).	In this study the outcome variable is continuous,

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		The sample size calculation and statistical analysis will depend on it.	ordinal and Nominal. Continuous data will be analyzed by ICC and ordinal/nominal data by Fleiss Kappa. Necessary Changes done in material/ methods section.

The above comment forwarded to the P.I., Reply has given by P.I. was reviewed by PR. Recommendation of Primary reviewer:-

- Provisionally approved

EC Decision: Approved

Ref. code: 110th ECM IIA/P19

5- Clarification of research proposal entitled "***Study of T regulatory cells, soluble cytotoxic T lymphocyte associated antigen-4 and transforming growth factor-β1 in patients of chronic myeloid leukemia on dasatinib therapy***" sponsored by ICMR submitted by Dr. Akanksha Singh, Ph.D Scholar 2019 under the guidance Prof. Rashmi Kushwaha, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no.33/22 dated 11th January, 2022.

Previous EC Comment:

- The investigator plans to study biomarkers at the start of treatment and after 3 months in patients with CML on dasatinib.
- The consent does not mention how much amount of blood to be collected and how many times.
- The patient information in the consent [English] is not appropriate. Benefit should mention the direct or indirect benefits to the patient and then to the medical science.
- Hindi consent is a very poor quality translation, incorrect, complex and clumsy. It needs to be rewritten in simplified form by Hindi speaking person. Automatic translation by software is not appropriate.
- It need to be confirmed that the decision of giving a particular drug is not dependent on the trial and is independent and before considering the patient for the study.

The above comment forwarded to the P.I. was reviewed by Primary reviewer with her <u>Second opinion:-</u>

Second opinion	PI response
The consent still does not mention about the amount of blood collected in EDTA and plain vials. It does not mention that	2 ml blood will be collected in each EDTA and plain vial.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

only the patients on dasatinib therapy will be included.	Yes, only patients on dasatinib therapy will be included.
The Hindi consent is a very very poor translation, not meaningful and incorrect. Needs to be rewritten and not to be translate by online translated by online translation software's.	Attached separately

The above comment again forwarded to the P.I. was reviewed by Primary reviewer with her <u>third opinion:-</u>

Third opinion	PI response
The Hindi consent especially the objective has exactly opposite meaning as compared to the English version. To me it translates [means] that 'to do dasatinib therapy to measure T Cells' This is not correct.	Attached separately
The English and Hindi consents still do not clarify that only the patients who are on Dasatinib will be included.	Attached separately
The Methodology mentions all patients diagnosed a CML by blood and bone marrow test will be included in the study.	Only newly diagnosed CML patients on blood and bone marrow who will be later on given Dastinib Medicine by the Clinical Hematologist as part of their treatment regime will be included in the study and followed up for 3 months.
The automatic translation method should not be used but the person knowledgeable should make correct translation. It will be good if another person does back translation of Hindi consent to English and check.	Response not given by PI

The above comment again forwarded to the P.I. was reviewed by Primary reviewer with her <u>Third opinion:-</u>

- Kindly revise Hindi consent form in layman language

Reply has given by PI was forwarded to Dr. Shubha R Phadke vide this office letter no. 2363/Ethics/2022 dated 25th March, 2022.

EC Comment:

- Hindi translation of ICF needs correction so that it is meaningful.

EC Decision: Approval subject to modification

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Ref. code: 110th ECM II B-Ph.D/P1
6-	Clarification of research proposal entitled "***Efficacy of dietary intervention of flax seeds (Linum usitatissimum) on signs and symptoms associated with perimenopausal syndrome***" submitted by Ms. Rashmi Shrivastava, Ph.D Scholar, under the guidance Prof. Sunita Tiwari, Head, Department of Physiology, King George's Medical University, U.P., Lucknow vide letter no.2491/PHY/21 dated 28th June, 2021. **Previous EC Comment:** • What is the budget and who is the sponsor • Is it alright to test herbal remedies by Allopathic Physicians • Section 5: Subject participation, type of subjects needs correction • Section 8: Elements need to check. If not ticked, mention reason CRF not included. • CRF not included **Methodology:** • There are no references. Has any such study ever been done? If not, how can you do a RCT as the first study? • It's a RCT: Mention all the elements of RCT • Inclusion criteria: Who have not used Vitamin from when to when? • Questionnaire: Where has the questionnaire been validated, in which language? • Sample size calculation: What is the effect size? ***The above comment again forwarded to the P.I. was reviewed by Primary reviewer with his <u>Second opinion:-</u>*** • Inclusion criteria: Define subject criteria according to Indian Menopause society. • Expected outcomes: shouldn't estrogen increase after intervention. • What are the expected outcome variables • What are the expected differences in outcomes • Validated Hindi translations of questionnaires are not provided • Why sample size has been calculated on basis of FSH and estrogen is being measured? ***The above comment again forwarded to the P.I. was reviewed by Primary reviewer with his <u>third opinion:-</u>*** The researcher has sent responses to the queries. However, the modified research proposal, with the clarifications incorporated within it has not been sent. The documents sent are incomplete and hence, cannot be reviewed. ***The above comment forwarded to the P.I., Reply has given by P.I. Recommendation of Primary reviewer:-*** • Provisionally approved **EC Decision:** Approved ***Ref. code: 110th ECM II B-Ph.D/P5***
7-	Clarification of research proposal entitled "***Impact of COVID 19 pandemic on paediatric musculoskeletal trauma patients admitted in a tertiary care centre***" submitted by Dr. Vikas Verma, Associate Professor, Department of Paediatric

	Orthopaedic, King George's Medical University, U.P., Lucknow vide letter no.1572/Paed.Ortho/2022 dated 8th February, 2022. **Previous EC Comment:** • Subject selection: Vulnerable subjects not checked • Privacy and confidentiality: Not checked • Does a consent form need to be filled? • Study design: It is not a cohort study? • Random selection: Needs to be elaborated ***The above comment forwarded to the P.I., Reply has given by P.I. Recommendation of Primary reviewer:-*** • Provisionally approved **EC Decision:** Approved ***Ref. code: 111th ECM IIA/P4***
8-	Clarification of research proposal entitled "***Establishing relationship of depression assessments with behavioral markers from digital phenotyping in Indian context***" submitted by Prof. Vivek Agarwal, Head, Department of Psychiatry, King George's Medical University, U.P., Lucknow vide letter no. 1863/Psy/2022 dated 23rd December, 2021. **Previous EC Comment:** • Risks and benefit: If risk is not reasonable, why do the study? • How will random allocation take place? • What is the need for randomization? • Why 100 patients? • No statistical plan • Data sharing/protocol • Privacy protocol • What is the privacy protocol of the application what is the privacy patient data is not shared with third party. ***The above comment forwarded to the P.I. was reviewed by Primary reviewer with his second opinion:-***

Second opinion	PI response
The title of the study is not clear	Title is revised *"Assessment of Behavioral markers from digital Phenotyping in patients with Depression in Indian Context"*
Sponsor of the study is a private organization: Please attach MOU/Agreement documents.	It has been enclosed.
Details of industry are to be provided and	It has been corrected.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	can't be NA	
	If budget is NA, who pays for coupons and app subscription?	It has been corrected.
	All scales/Questionnaires are supposed to be self administered by patient: Attach validated translations in local language.	It has been attached
	Objectives 1: Can't be fulfilled by present research plan	It has been described.
	Objectives 2: What are the metrics of comparison in the 2 group-explain in methodology.	It has been described.

The above comment again forwarded to the P.I. was reviewed by Primary reviewer with his <u>third opinion:-</u>

- Please see the attached agreement. To me, as a layperson, it seems to be unusual, due to the following issues:
- There is no stamp of Institute/ University or letter Head.
- It seems unusual that a faculty is allowed to get into an agreement. I think that the University authorities are supposed to sign and stamp.
- The language is not of the legal kind as is used in agreements.
- Prof. Amita Jain's agreement which was attached had a different format.
- I would request you to kindly have a look into this.
- Please understand that I am not interested in stalling or discouraging research, but this does not look appropriate to me as this may cause you problem.

The above comment forwarded to the P.I., Reply has given by P.I. Recommendation of Primary reviewer:-

- Provisionally approved

EC Decision: Approved

10-	Clarification of research proposal entitled **"*Pan India epidemiological, virological and genomic surveillance for Human influenza and COVID-19 through DHR-ICMR VRDL network*"** sponsored by DHR-ICMR submitted by Dr. Suruchi Shukla, Assistant Professor, Department of Microbiology, King George's Medical University, U.P., Lucknow vide letter no.1858/2022 dated 22nd January, 2022. **Previous EC Comment:** • Risk and benefits: • There **is** physical risk/discomfort • It is more than minimal risk • There is **no** benefit to the subject • What is the definition of "self collected specimens" • What is the definition of "sentinel sites" • Sample size: Will diagnosed SARS CoV-2 patients be enrolled also (this is with reference to statement: in addition to ILI definition……) • Broadened case definition: Tuberculosis can present with more than 2 criteria. Body ache, headache, feverishness are common symptoms of patients of various diseases: Malaria, Dengue, etc. Needs to be modified. • Children (2m-5yrs): is this the definition of ILI/SARI- please clarify • Oseltamivir: • Is it required to do a susceptibility test for osetamivir in patients with Influenza A before prescribing to patients? • Statistical plan and sample size justification is not given. • Patient information document: • 6. Will the sample be taken from only one of the sites or both. Consent form says 'or' but research protocol mentions 'and'. • Which report will be sent to the physician, when and for what purpose. How will it affect treatment protocol?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• 17. Which test results will be communicated? • Hindi version of the patient information sheet doesn't have a description of what will be done. • Many fields are missing, which are present in the English version. ***The above comment forwarded to the P.I., Reply has given by P.I. Recommendation of Primary reviewer:-*** • Provisionally approved **EC Decision:** Approved ***Ref. code: 112th ECM IIA/P1***
11-	Clarification of research proposal entitled "***Identification and characterization of extra-cellular proteins under antibiotic stress conditions in E.Coli strains from patients with UTI***" sponsored by Govt. Agency submitted by Dr. Sheetal Verma, Associate Professor, Department of Microbiology, King George's Medical University, U.P., Lucknow vide letter no.1430/21 dated 26th November, 2021. **Previous EC Comment:** • Objectives not properly enumerated, objective No. 5 is not clear. • Methodology details not provided. • Sample size not mentioned. ***The above comment forwarded to the P.I. was reviewed by Primary reviewer with his second opinion:-*** • Calculation/Justification not provided for his sample size. ***The above comment forwarded to the P.I. was reviewed by Member Secretary, IEC:*** • Provisionally approved **EC Decision:** Approved ***Ref. code: 112th ECM IIA/P7***
12-	Clarification of research Protocol no.CT-CE-CS-2020 entitled "***An open label, single arm, multi centre, phase IV clinical study to evaluate efficacy and safety of tropicamide 0.2mg/ml, phenylephrine HCI 3.1mg/ml, lidocaine HCI 10mg/ml intracameral injection in patients undergoing cataract surgery***" sponsored by Sunways India Pvt. Ltd. submitted by Dr. Pramod Kumar, Associate Professor, Department of Ophthalmology, King George's Medical University, U.P., Lucknow, vide letter no. OPH/241/2021 dated 20th September, 2021. **Previous EC Comment:** • Item [5 vi] – Vulnerable subjects - NOT MENTIONED • Item [5vii] – Special groups – Mentioned yes. Which special groups -clarify • Item [10 i] – Is the risk reasonable compared to the anticipated benefit? Answer is NO. Clarify. • Item [3 iv] – Is it an investigational new drug? Answer is YES. Which is the new drug?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

- Page 7 – What is FDC? [Fixed drug combination] – NOT GIVEN IN ABBREVATIONS
- Nowhere in the protocol the dose is used. Only the formulation of the FDC is given.
- PATIENT INFORMATION DOCUMENT
- In general, the information document is big and cluttered. It needs to be made simpler.
- Use of the word 'Intracameral' should be avoided. Information should be simple.
- What does phase IV trial means should be clarified. The previous data should be given in simple form. What is the other option has not been given. What is the use of this drug in the surgery has not been given.
- The information regarding research, study design and study procedure can be combined in two –three paragraphs. Results of previous studies done should be given. It should be clarified that the drug is marketed and it is a post-marketing survey as I understand by phase IV trial.
- Some other expert need to see the part related to financial compensation.
- Hindi translation should be simplified and easy speaking Hindi need to be used.
- With these modifications the trial can be approved.
- CTRI registration is pending;

The above comment forwarded to the P.I. was reviewed by Primary reviewer with her second opinion:-

- The investigator had written wrong answers to many questions INADVERTENTLY and now they have corrected. This is a matter of concern for FDC, there is no data as per the investigators. The drugs are approved. Does FDC need approval of DCGI?

The above comment again forwarded to the P.I. was reviewed by Primary reviewer with her third opinion:-

- Approve if Dr. Shally agrees with the definition of vulnerability.

14- Clarification of research proposal entitled ***"To evaluate feasibility of incorporating simulation based training in the undergraduate teaching program of Obstetrics & Gynecology"*** submitted by Prof. Anjoo Agarwal, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no.GO/263/22 dated 4th February, 2022.

Previous EC Comment:	PI response
What is the sampling plan, including sample size?	**1. Sample Size Calculation** Sample size calculation for the study is done using the following formula for proportions: $n - \frac{z^2[p(1-p)]}{e^2}$ As reported by Iusia Alsuwaidi - The statistical analyses demonstrated that the rate of change among the group with simulation (23.46%) was significantly higher than the rate of change among the group without simulation Hence, for sample size calculation taking p=0.23, **e** is error allowance (at 5% allowance its value is 0.05), **z** is constant at a certain confidence level (its value at 95% confidence limit is 1.96). $n = 1.96^2 [(0.23*(1-0.23)/ (0.05)^2] = 272.13$ Accounting for missing observations or errors (10%) in reporting/collecting observations the sample size is rounded off to a total = 245 **students in the study.** **Reference** Alsuwaidi L, Kristensen J, Hk A, Al Heialy S. Use of simulation in teaching haematological aspects to undergraduate medical students improves student's knowledge related to the taught theoretical underpinnings. BMC Med Educ. 2021 May

		12; 21 (1):271.
	What is the research hypothesis? It should be properly defined in terms of the population parameter after identifying the study variables?	Null hypothesis – Simulation based training has no advantage over traditional teaching for undergraduate students in Obst & Gyn.
	The instrument (questionnaire) used is Google form. It is not attached. Is the validity and reliability of instrument done?	The questionnaire is being attached. It has been validated by taking opinion from peers
	Define the parameters used for assessing the usefulness.	Parameters used for assessing usefulness are attached as feedback form.

15- Clarification of research proposal entitled ***"Impact of 3D printed bolus on efficacy of Radiotherapy: moving from one-size-fits-all to patient specific approach"*** submitted by Dr. Teerthraj Verma, Additional Professor, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no.899/RT/2021 dated 9th November, 2021.

Previous EC Decision: Pending

The Primary reviewer has given his reply.

Primary reviewer recommendation:

- A departmental committee member is a Co-Investigator: potential conflict of interest.
- Subject participation: 20 months. Will all subjects be followed up for 20 months?
- Privacy and confidentiality: incomplete.
- Who will obtain consent: not filled.
- Section 10 i, ii, not filled
- Section 11: not filled
- Section 12: not filled
- Justification: Last sentence doesn't make much sense?
- What material will be used for 3D printing? How do you plan to evaluate its properties?
- Please elaborate how each 2D and 3D bolus will act as its own control?
- The title is not commensurate with the methodology. It appears that this is a dosimetric study, not an efficacy study.
- Outcome measures are vague and not clearly understandable.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

- What statistical tests will be used? And what "other tools" will be used?
- Budget break up is not provided.

1	3D painting is not a novel approach. Will the material allow to pass through?	• It is true that 3D printing is not a novel approach. However, its use in radiotherapy is very limited in India. Hardly any center in India is using this technique for patient treatment in radiotherapy department. Therefore, the application of 3D

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			printed devices in our department will be beneficial for patient. • Yes, the material used for preparation of patient-specific devices like bolus and surface mould in radiotherapy will allow the radiation to pass though.
	2-	Elaborate more on methodology cost of the devise should be passed to the patient.	• As suggested, the modifications in the methodology have been made and added in the revised proposal. • The cost of device will be around 500 INR per patient for acrylonitrile butadiene styrene (ABS) and polylactic acid (PLA) printing materials.

25- Clarification of research proposal entitled "***Decoding central nervous system microenvironment following JEV infection: a Neuroinflammation perspective***" sponsored by DBT New Delhi submitted by Ms. Anjali Singh, Ph.D Scholar 2019 under the guidance Dr. Himanshu Dandu, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 589/MED/22 dated 23rd March, 2022.

Previous EC Comment	PI Response
Hypothesis	We hypothesize that Microglia/macrophages are the key players in the neuroinflammation and functional outcome following Japanese encephalitis viral infection. Understanding the key factors (genetic/metabolic) including microparticle mediated signaling pathways involved in microglia/macrophages activation can be beneficial for modulation of JE virus pathogenesis and functional outcome.
Sample size	Assuming 35% relative error (equivalent margin of error =9.72%) in Japanese Encephalitis of 27.7% prevalence , at minimum two-sided 95% confidence interval estimated sample size came out to be 82. Sample size was estimated using software Power analysis and sample size version -16 (PASS-16, NCSS, LLC, USA).

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Finally, in this study, we will target at least 85 Acute Encephalitis syndrome (AES) confirmed cases.
	Methodology	**Study subjects** The present study will be conducted on patients having JEV infection, acute encephalitis syndrome (AES) and other neurological diseases admitted in Department of Medicine, KGMU, Lucknow. **Inclusion and exclusion criteria:** **(A) Inclusion criteria:** Persons having Japanese Encephalitis will include in this study. **(B) Exclusion criteria** Persons having following problem will be excluded from this study • Severe malnourishment • Acute infectious disease • Ear infection • Tuberculosis • Heart, liver and kidney problems • Allergy • Person treated with any immunosuppressive therapy **Sample Collection:-** ➢ Blood samples (4 ml) will be collected in EDTA vials from JE-AES, Non-JE-AES, and other neurological diseases patients for genetic analysis and microparticle characterization. ➢ CSF samples (100µl) will be collected from the JE-AES, Non-JE AES and other neurological disease patients for metabolic profiling. All samples will be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		centrifuged at 4°C, 3000rpm for 10 minutes. Then protease inhibitors will be added in samples and will be stored at -80°C for further use. **Methods:** Patients of either sex of all age group will be selected for this study. **Specific methods for achieving objective-1: To determine the genetic changes involve in immune cell activation in JE-AES, Non-JE-AES and other neurological diseases patients.** **DNA extraction:** DNA will be extracted from Blood samples by Qiagen DNA extraction kit according to manufacturer's instruction and stored at −20 °C. DNA concentration and quality will be determined using the NanoDrop 2000 spectrophotometer (Thermo fisher). **Genetic analysis:** Genetic analysis such as PCR-RFLP/qPCR will be performed for inflammatory markers/neuronal cell death (such as HMGB1, TNFα, ubiquitin etc.) and Iron regulatory gene biomarkers such as Transferrin in the blood of (1) Japanese encephalitis; (2) Non-JE AES and (3) other neurological diseases patients. **PCR-RFLP:** Polymerase chain reaction -restriction fragment length polymorphism (PCR-RFLP) method will be used to investigate Gene polymorphism of inflammatory markers/neuronal cell death (such as HMGB1, TNFα, ubiquitin etc.) and Iron regulatory gene biomarkers such as Transferrin

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		in the blood. SNPs will be amplified by PCR using the designed PCR primers. Amplified PCR product will be visualized in agarose gel electrophoresis with ethidium bromide (EtBr) staining and digested with specific restriction enzyme (Fermentas, New England Biolabs) at optimum condition. The digested fragments of DNA will be visualized on 2% agarose gel and categorized in three genotypes: Wild type, Heterozygous and Homozygous. **Measurement of mRNA level of genes blood samples:** **RNA extraction:** Total RNA will be isolated by RNAiso Plus Kit (TaKaRa Biotechnology Co., Dalian, China.),from blood of patients. TriZol will be added in blood sample and phase separation will be done using chloroform by centrifugation at 12,000g for 15minute, 4 °C. Upper layer will be collected and mixed in equal volume of Isoproponol. Pellet recovered by centrifugation at 12,000g for 10minute, 4 °C. RNA concentration and quality will be determined using the NanoDrop 2000 spectrophotometer (Thermo fisher). **Real-time quantitative PCR:** RNA will be converted to cDNA using Verso cDNA RT kit (Thermo Scientific, Pittsburg, PA, USA); the protocols used will be according to the manufacturer's instructions. Real-time PCR will be performed using an ABI 7500 Sequence Detection System (Applied Biosystems) in the presence of SYBR Green. Standard PCR conditions will be used as prescribed in SYBR Green I core reagent protocol. PCR will be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		performed using nucleotide primers of inflammatory markers/neuronal cell death (such as HMGB1, TNFα, ubiquitin etc.) and Iron regulatory gene biomarkers such as Transferrin (Integrated DNA Technology, Coralville, IA, USA). Relative expression level will be normalized by GAPDH expression. Comparisons of gene expression will be calculated by 2−ΔCt comparative Ct method. **Specific methods for achieving objective –2: To study metabolic profile for inflammatory associated protein (such as, Glutamate) and lipid in JE-AES, Non-JE-AES and other neurological diseases patients.** Metabolites analysis such as LC/MS will be performed for inflammatory associated protein (such as, Glutamate) and lipid in the CSF of (1) Japanese encephalitis; (2) Non-JE AES and (3) other neurological diseases patients. **LC/MS:** Extraction and quantification of PLs will be performed by standard protocol of LC/MS. Briefly; the collected samples will be mixed and sonicated with a 10-fold volume of methanol and an internal standard. After centrifugation at 21,500 × g, the resulting supernatant will be recovered and will be processed for LC/MS analysis. 20 µL of methanol extract will be separate using columns and a gradient of solvent A (5 mM ammonium formate in water) and solvent B (5 mM ammonium formate in 95% [v/v] acetonitrile). Elution will be sequentially ionized and the parent ion and fragment ion will be monitored in the positive mode using a

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Quantum Ultra Triple Quadrupole Mass Spectrometer (Thermo Fisher Scientific). **Specific methods for achieving objective –3: To characterized blood microparticle in JE-AES, Non-JE-AES and other neurological diseases patients.** Blood microparticle will be isolated from (1) Japanese encephalitis; (2) Non-JE AES and (3) other neurological diseases by using differential centrifugation. **Blood microparticle Isolation:** Plasma will be isolated from blood and centrifuge at 1500×g for 5minutes, supernatant will be collected and again centrifuge at 15000×g for 30minutes. After that, Supernatant will be collected and ultracentrifuge at 100,000×g for 60minutes and pellet will be resuspended in PBS. Isolated microparticles characterized by using the technique like Nanoparticle tracking Analysis and electron microscope. **Nanoparticle tracking Analysis:** Size distribution and concentration of EVs will be visualized using Nanosight (NTA 3.2 Dev Build 3.2.16) equipped with sCMOS. Briefly, samples in PBS will be thawed to room temperature and after 30s vortex injected into sample chamber. Three replicates of analysis by 60s for each sample will be captured at 25 °C and processed using NTA software **Electron microscope:** Blood microparticle size and structure will be further analysed by using Scanning Electron Microscope (SEM).

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Statistical Analysis	Statistical software SPSS (version 20.0, Chicago, LA) and GraphPad Prism 5 will be used for statistical analysis. Hardy-Weinberg equilibrium (HWE) for genotypes, comparisons between the groups of study populations and clinical symptoms were analyzed by chi-squared test. All continuous variables will be expressed as mean ± standard deviation whereas; percentages will be used to express categorical variables.

1.	No information about genetic testing has been provided in the consent [optional genetic testing] and none in the protocol. Specify which.	*The details of genetic testing provided in section 2 of optional genetics and about volume of blood section 4 of the consent. The optional genetic is also mentioned in page 67 of the protocol (8.5.3 of the protocol).*

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			DNA sampling / Pharmacogenetics The study includes an optional genetic research component which requires a separate informed consent signature if the participant agrees to participate. As permitted by local governing regulations and by IRB/IEC, it is required as part of this protocol that the Investigator presents these options to the participant. The purpose of genetic research may be to better understand the safety and efficacy of LNA043, or to learn more about human diseases, or to help develop ways to detect, monitor and treat diseases. As technology changes over time, the most appropriate technology will be used at the time the exploratory genetic research is performed. This may include the study of the entire genome. Laboratory manuals will be provided with detailed information on sample collection, handling, and shipment. To maximize confidentiality, all samples and the information associated with the samples will be double-coded to prevent the exposure of the participant's information and identity. This double-coding process allows Novartis to go back and destroy the sample at the participant's request. In addition, sample information is stored in one secured database while genetic data is stored in an independent secured database.
	2.	Informed consent brochure / form in the submission part A and attached to the application by KGMU PI appear to be different.	*The ICF in the submission part A will be used for taking consent.*
	3.	There is no specific provision for force majeure in this agreement. 28. Clarification of research proposal entitled "***Evaluation of factors leading to non-utilization of antenatal care services among pregnant women and assessment of their knowledge, attitude & perception towards government sponsored services during pregnancy and labour***" submitted by Ms. Namita Singh, Ph.D Scholar 2019, under the guidance Prof. Anjoo Agarwal, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no.OG/781/22 dated 29th March, 2022.

Previous EC Comment:	PI response
• Is sample size ok for the study 370 only? Kindly justify sample size?	The sample size calculation was based on the study of Upadhyay et al: Internet J community Med Public Health. 2017;4: 680-685. But as per your comments and discussion with the guide and co- guides, we will take 370 pregnant women from the slums of Lucknow city and 370 from the villages of district Lucknow. Total 740 subjects would be taken for the study.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

• Simple questionnaire based study for PhD?	The researcher is P.G. in sociology and Human Development & family studies, in both of these subjects, researches are based on questionnaire and researchers deal with sociological aspects of any problem. In such type of studies, the society plays the role of laboratory and questionnaire is the best tool to gather the information. In present research, the researcher wants to do medical social research in which during interview the researcher would not only collect the data but also counsel the study participants and will develop an IEC on the basis of results.
• No standard method for income	We have incorporated modified B.G.Prasad scale classification for per capita income 2021.
• Is this a part of Application project?	No, this study is not a part of any project.
• How was questionnaire developed?	After reviewing the literature, following studies and material were taken into account for developing the questionnaire: 1.Rivero-Fuentes ME, Rama Rao S, Estrada R, et al. Assessing Integration Methodology (AIM): a handbook for measuring and assessing the integration of family planning and other reproductive health services. FRONTIERS Manual, Population Council, Washington DC, 2008.

		Dept of human development & family studies, BBAU, Lucknow). Pre testing of the questionnaire has been done on 10% of study population and Cronbach's alpha of the KAP section is - 868 which shows the good reliability of the questions. This questionnaire is not a psychometric scale, the basic objective of the study is to check the utilization pattern of the ANC and knowledge & attitude of the pregnant women towards the Government sponsored services. Most of the questions are only descriptors of the problem. which have to be evaluated independently and does not form a gradation / scaler pattern. The basic purpose of the study is to carry out audit of the ANC utilization trends using a semi-structured but not a scaler inventory. After pre testing of the questionnaire some irrelevant and unnecessary questions have been removed and few questions have been adopted to get the proper and correct information, with the suggestions of the Guide and co- guides.

double-blind, placebo-controlled, multicenter trial, assessing the impact of inclisiran on major adverse cardiovascular events in participants with established cardiovascular disease (VICTORION-2 PREVENT)" sponsored by M/s Novartis Healthcare Pvt. Ltd submitted by Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow, vide letter no.2151/Cardio/Res/21 dated 28th March, 2022.

Sl.No.	Previous EC Comment:	PI response
1-	Kindly share approval of other Institute The drug had been tried in multiple trials since 2017 in more than 3500 patients. The mortality rates in drug and placebo are controlled. No major SUSAR	Does not need any clarification
2-	Did the drug showed efficacy?	Drug was effective and lowered LDL cholesterol significantly
3-	The drug has been approved in EU in 2020 and in USA in December 2021.	Yes, it has been approved
4-	Does it mean it is a post marketing survey? What is the need of this study?	No, it is not post marketing survey it has shown reduce LDL significantly but this is first study to show
5-	The study protocol mentions 2020. Is it a new proposal or resubmission?	It is a new protocol.
6-	Healthy volunteers - ?DCGI –YES	No
7-	The insurance certificate is available but has expired on dec 2021.INR – 73638000 per tested person.	Renewed Insurance certificate attached
8-	Information brochure and consent form are ok	Does not need any clarification

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

9-	15000 participants – how much from this centre -30 to 40	At least 30 to 40 may be increased because of comparative enrollment
10-	Sample sent abroad for uniformity	Yes
11-	CTRI –Pending	Attached
12-	27 centers in India- IEC – submitted, all under review.	Yes, some reviewed and some under review
13-	Someone with experience in evaluating drug trials should look at it.	Yes, PI, Co-PI & CRC
14-	There is consent for DNA testing. But the protocol does not mention which genetic testing will be done? Will some specific pharmacogenetic variants will be studied or whole exam or whole genome sequencing will be done? Each has different implications. Protocol and consent should be clear for this issue. Page 72 of the protocol mentions – 12.5.3- provides very limited information.	Participation in genetic sub-study is optional and is completely patient's decision. At this point of time, we have not entered into any agreement for analysis
15-	Kindly share approval of other Institute	EC approval attached for those sites who got approvals

The above responses forwarded to the Primary reviewer.
Recommendation of Primary reviewer:

- To the question 14- the answer is that the type of genetic testing to be done has not been decided yet. In that case the investigators can not collect the samples of patients for genetic testing without telling what type of genetic test will be done. In that case the consent for DNA testing can not be taken and staples can not be collected. This part may be deleted.

		Weight: 65 KG **Height:** 152 CM **Patient History:** A letter was received in the office of the Ethics Committee on 28th January, 2022. The letter stated that for 42nd follow up visit many calls were made but the calls were not answered. On 19th January, 2022, the call was made again and the LAR received it. The LAR revealed that the patient passed away on 21st August, 2021 around 9:00 PM at home Local Practitioner was contacted and treatment was given but the patient did not improve and finally expired. The subject was not hospitalized anywhere. The PI does not have any records to confirm the cause of death except the death certificate. No Autopsy was done. Most likely it is not related with study drug. ***Recommendation of Primary reviewer:*** SAE (Death) is most likely due to disease outcome (RHD/ Sev. MS/ Mod MR/LAA clot with AF) and not due to intervention (Rivaroxaban) as patient was taking VKA from more than 3 years and completed 36th Month visit without any complaint. Causal relationship cannot be established as the subject was not hospitalized anywhere and there are no records to confirm the cause of death except the death certificate. Autopsy was also not done. **ADR Sub Committee Comment:** Confirm age of the patient from the PI and get documents with correct age resubmitted **ADR Sub Committee Decision:** Re-submit ***Ref. code: 83rd ECM IIC/P6***
IB	**Expedited review**	
1	Expedited review of the research proposal entitled ***"Risk factors and effect on inflammatory markers in fungal infections during Covid-19 pandemic: A pilot study"*** submitted by Dr. Atin Singhai, Additional Professor, Department of Pathology, K.G's Medical University, U.P., Lucknow vide letter 2792 dated 11th June, 2021. ***The above proposal was forwarded to 2 PRs.*** ***Recommendation of First reviewer*** -Approved ***Recommendation of Secondary reviewer with following points:*** • Background:	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	All studies, however novel, have some background information on which any research is built on. This study doesn't mention any background or rationale for testing the variables mentioned. It is necessary to provide this. • Objectives: Objective 2 is very vague. Please mention explicitly, what is planned. • Justification of Study: i) In the absence of data from patients of first wave, it will be extremely difficult to understand the difference in risk factors between the two waves. ii) How can you use the information gathered in your CRF to identify biomarkers that may allow early prediction of disease when you are recording biomarkers at onset of symptoms (of fungal infection) and at time of admission (which I presume, will be after onset of symptoms). Even if it is vice versa, this study cannot, in my understanding, fulfill this purpose? iii) Also, your justification doesn't match with the objectives of your study. • Inclusion criteria: i) Will the included patients be those who have had covid infection or any patient with any fungal infection? ii) If only covid positive patients will be taken, how many days/ weeks old covid positivity will be considered for inclusion or only currently covid positive patients will be included? iii) Will any other fungal infection, other than the 3 mentioned, be included? • Case Record Form: i) Socioeconomic status: What tool will be used? ii) Risk factors: What is the importance of a negative covid test? iii) How is a person defined as "vaccinated" for this study? iv) Patients with covid can be admitted sequentially in multiple hospitals: Which admission will be documented and analyzed? v) How do you plan to quantify oxygen therapy: Patients are on multiple doses and multiple modes/levels of O2 therapy at different points of times vi) Steroid therapy can be by different routes (oral, IV) different drugs. Similarly, dosage doesn't always remain the same during therapy. How do you plan to address this issue? vii) Define recent blood transfusions viii) Define controlled/uncontrolled diabetic ix) Will you consider, for example, an adult of say 60 yrs who had a malignancy at 20 yrs of age and is disease free till now as having a malignancy or not? x) Any use of antifungal drugs, for example Tinea infestation, any time in life, will be recorded? xi) Define recent dental or nasal surgery. xii) How will trauma and burns be defined? And how long ago incidents and what extent of injury will be recorded?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	xiii) How can you be certain that a whole set of investigations mentioned have been done on the day of onset of symptoms? And what symptoms are you looking for? xiv) What if some/ all of the investigations are missing/ not done? Will these patients be included? xv) Imaging: What does one understand by this? What type, time, site? • There are about 30 risk factors that will be analyzed, in a sample size of 60 patients. How do you plan to eliminate the role of chance in a factor showing statistical significance? ***The above comment forwarded to the P.I. Reply Pending by 25th February, 2022.*** ***A letter by forwarded to Dr. Atin Singhai by the Member-Secretary, IEC that kindly send your reply within seven days' or else your proposal will be taken as withdrawn.*** **EC Comment:** Response of PI is not received by Monday i.e. 4th April, 2022 **EC Decision:** Since you have not sent the revised proposal till date it is considered that you have withdrawn it from the Ethics Committee. ***Ref. Code: 115th ECM IB/P1***
2	Expedited review research proposal entitled "***Covidsurg-3: outcomes of surgery in COVID-19 infection***" submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/134/2022 dated 25th January, 2022. ***The above proposal was forwarded to First Primary reviewer & Secondary PR.*** ***Recommendation of First PR with following points:*** • No. patient information sheet is attached. Kindly format as per SOP and attach. • Sample size & its calculation are not indicated. Whether 2000 patients from every 400 centers are to be recruited/ analyzed? Kindly clarify. • What type of data & how will it be collected to define the predictors of morbidity. • Proposal summary needs to be rewritten in a more understandable manner rather than affixing the few protocol pages. The various sub heads of description need to be as per EC (IRB) SOP protocol. • The duration of project in more likely to include retrospective patients-then how is ICF possible in every patient? • Kindly attach a relevant document of sponsor revealing the name. • If this is an International project then summaries the international stake holders/partners. • If this is multicentric project then mention the names of other collaborating centers or give clarification otherwise. ***The above comment forwarded to PI, reply has given by PI was reviewed by Dr.***

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Anupam Mishra:

- Provisionally approved

Recommendation of Secondary PR with following points:

- The research proposal seeks to collect data regarding the management and outcome of Covid patients from several hospitals across the world. This being data related to the pandemic could be sensitive information. Would it not be prudent to seek permission from the University or State/Central authorities for sharing of this data on an International level?
- The proposal has on PI and 18 Co-PI which seems rather far-fetched and unnecessary considering that the project involves only data collection and no intervention. Clarification may be sought on this and number of Co-PIs reduced accordingly.
- Most of the Covid patients undergoing surgery may have been seriously ill, however, the section on 'Vulnerable Subject' has not been filled by the PI.
- The study will be both prospective as well as retrospective. How will the consent be obtained from patient in the retrospective arm?

The above comment forwarded to PI was reviewed by Dr. DNU with his second opinion:-

Second opinion of Secondary PR	PI Response
The PI has not justified the sample size.	The recruitment will be from approximately 400 hospitals around the world with a mean of 5 patients per hospital, providing a sample size estimate of 2,000 patients. The primary outcome is 30-day mortality. The secondary outcomes are 30-day postoperative pulmonary complication and 30-day venous thromboembolism. Non-parametric data will be summarised with medians and interquartile ranges and differences between groups tested using the Mann-Whitney U test. The $\chi 2$ test was used for categorical data. Missing data will be included in flowcharts and summary tables, allowing denominators to remain consistent in calculations. Hierarchical multivariable, mixed-effects logistic regression will be used to identify risk predictors of 30-day

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		mortality and 30-day postoperative pulmonary complications summarised as odds ratios and 95% confidence intervals. Clinically plausible patient, disease, operation and location specific factors have been selected *a priori* for inclusion in adjusted analyses based on previous studies1-2: age sex, ASA grade, indication for surgery, urgency of surgery, grade of surgery, timing of SARS-CoV-2 diagnosis, in addition to vaccination and previous infection status.
	The permission for this International study of data related to the Covid Pandemic has been sought from ICMR-Health Ministry's Screening Committee but has not been granted yet.	Yes, as communicated in the previous reply that the all sites in India are waiting for approval from **ICMR-Health Ministry's screening committee, and the study will start only after the approval. We will be communicating to IEC as and when we get the approval.**
	The PI has sought IEC waiver in this sensitive International study using data from the Pandemic.	As per the previous IEC comments, IEC recommended to take consent waiver in regard to the study timeframe. The issue was brought in the notice of the Honorary Member Secretary who advised to get the consent waiver as a part of Ethics Committee waiver form (attached with the previous reply)

The PI has given his reply was reviewed by Secondary PR.
Third opinion given by Secondary PR:

- The project may be approved conditional to the obtaining of approval from ICMR-Health Ministry's screening committee.

EC Decision: Approved

Ref. code: 115th ECM IB/P2

3	Expedited review research proposal entitled "***Development of "Digital Dentistry" as module for undergraduate prosthodontics curriculum***" submitted by Dr. Shuchi Tripathi, Additional Professor, Department of Prosthodontics and Crown & Bridges, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 1069/2022 dated 1st February, 2022. ***The above proposal forwarded to 2PRs.*** ***of First PR with following points:***

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

- Do you think that the reason for Expedited Review is justified-"educational Project with 8 month duration"?
- It's on a topic which is not dependent on any timeline (eg. Pandemic), nor are the participants going to change if it comes through the normal channel.
- Last, whatever the results of this study are, they will not bring about any rapid change in the training programme.
- **Please let me know your thoughts on this. I don't have any problem with reviewing it.**

Recommendation of Secondary PR:

- The project is interesting and nicely planned
- Provisionally approved

EC Decision: Approved

Ref. code: 115th ECM IB/P3

4 Expedited review research proposal entitled "***Smartphone-based COVID-19 cough detection with artificial intelligence***" submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/191/2022 dated 7th February, 2022.

The above proposal forwarded to 2 PRs.

Previous EC comment of First PR	PI response
Comment 1: There are 15 co-PIs. What is the need and rationale of 15 Co-PIs at a single center?	Firstly, the study involves adult patients from both surgical and nonsurgical departments and health volunteers this will ensure the comprehensive study sampling. And, to do that we involved multiple COPI. Secondly, this will allow enrolling the required patients in a reasonable time frame given the rapidly changing situation of COVID. Thirdly, the given departments have been collaborating with us in other international studies so we find it very convenient for data collection.
Comment 2: Scientific review committee of the department reviews the project. But not a single member from his own department (ie Surgical Oncology) is in the scientific review	Because all faculty members from the PI department (Surgical Oncology) are the Co-Investigators in this study, therefore we found it more essential to include members from another

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

committee of the department. There is one member from the department of radiotherapy and two members from the department of pathology.	department for constituting scientific review committee. However if the reviewer wants the committee members from the parent department we are happy to do so.
Comment 3: How will the researchers assure the participants' privacy while they are using a third party app while researchers are offering them to use it for the study.	Intellectual property rights for Indian data remain with Indian investigators. KGMU data property rights remain with KGMU and can be used for their own studies after information to the national coordinating investigator as well as sponsoring body.
Comment 4: Undertaking by PI {annexure 2-RV-1/2019 (SOP-IEC-KGMU)}: point number 3 is vacant while they have stated as multicentric study.	CTRI document has been attached with the participating sites details.
Comment 5: In exclusion criteria: Any conditions that would significantly affect interpretation of the study result will be excluded. Ideally these conditions should be predefined rather than spot exclusion depending on the recruiting person's will.	The reviewer is right. This has been amended. The newer version of the protocol has been attached where this issue has been resolved.
Comment 6: In exclusion criteria: It is mentioned that recruited subjects will have RT PCR testing prior to recruitment while on page number 39 under heading of facilities it has mentioned that samples for RT PCR will be processed at CMC Ludhiana. It seems there is some ambiguity and should be clear.	Apologies for this. RTPCR will be done at the site and not in CMC Ludhiana for KGMU. KGMU samples will be tested as per KGMU protocols and at KGMU. We do not envisage any change in practice at KGMU. Changes have been made in protocol.

The above comment forwarded to First PR-Reply pending

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Previous EC Comment of Secondary reviewers	PI response
Comment 1: 15 co-investigators with exactly similar roles (obtaining informed consent, including patients, data entry) may be curtailed if possible. Considering assessment of cough the entire list (comprising 10 out of 15 co investigators from surgical specialty), should be complemented with more investigators from medicine and at least one from pulmonary medicine (that deal with cough more often that surgical specialty) Accordingly the selection of co- investigators may be modified	All Co-PIs are the faculties in the institute and sees patients individually therefore the basic screening inclusion/exclusion consenting, responsibilities lies individually with these Co-PI therefore we believe it is essential that all those who are participating share the responsibilities equally. Yes the reviewer is right that cough as a symptom is more often seen in the OPD of Departments such as Medicine, ENT and Respiratory medicine. Having said that this study is not solely looking at the pathological cough therefore this was the reason for not including these specialities at first place. However if the committee thinks that more Co-PIs are illegible and can be added then we will be happy to include as many departments/Co-PIs as stated by the reviewer.
Comment 2: Kindly indicate the members for data and safety monitoring committee/ board.	**Data Protection Policies:** All data collected via the data collection mobile app will be sent securely to Virufy's infrastructure located in the US regions. It will be protected by various controls such as access controls, encryption at rest, etc. Only members of the Virufy engineering / clinical research team will be able to access collected data. Proper security controls, including multi-factor authentication and training

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			including information security and HIPAA awareness will be administered to all members with access to patient data on a need-to-know basis. Data will be accessed by Stanford faculty-advised AI development team for training and validating AI models to predict for COVID-19 and by Stanford faculty-advised clinical team which will analyze data for scientific publication and articles. Information input by patients into the web app will be encrypted in-transit and sent directly to Virufy's Amazon Web Services ("AWS") cloud infrastructure in the US for storage and processing. (ii) All data will be stored in an encrypted, password secured RDS Postgres database with daily automated backups. (iii) Access to AWS infrastructure is protected with multi-factor authentication and logging of all user activities with CloudWatch. Secure user authentication policies and procedures are enforced, and all members with access are required to undergo security training. (iv) In conjunction with data privacy lawyers, Virufy has developed and maintains a robust Data Protection Impact Assessment ("DPIA"). (v) Virufy's information security team includes experts who have worked at Google, Okta, HP, Cisco, and f5 Security. (vi) Virufy has implemented suggested best security practices from AWS and industry standard practices and continues to advance practices to

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			ensure the confidentiality, integrity and, availability of data. Information about security and privacy-related audits and certifications performed by AWS, including information on ISO 27001 certification and Service Organization Control (SOC) reports, is available from the AWS Security Website and the AWS Compliance Website. (vii) In addition, Virufy is only using AWS HIPAA Eligible Services. Participant data will be labeled with an auto-generated and anonymous unique ID. Stanford and collaborating nonprofit (Virufy) will receive no identifiable information through the study, except for speech data, and de-identification will not be possible. Participant names and other directly identifiable information will not be available to Stanford or the Virufy research team and thus will not appear on reports, publications, or disclosures of clinical study outcomes. Subject vocal recordings and textual survey results will only be accessible by Stanford and collaborating nonprofit's US and India-based clinical research and AI development teams. PCR test results will be accessible by local study staff and protected by existing patient confidentiality protocols in-place through their healthcare institutions. Collected participant health data will be labeled with an auto-generated and anonymous unique ID, during storage into the AWS Postgres database.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		All data will be encrypted in the Postgres database and only accessible to authorized users with AWS accounts protected by multi-factor authentication as described in further detail prior. The collaborating research group, Virufy may share anonymized participant personal information (for example, biometric information and health information stripped of information that could be used to identify participants) with third parties (including academic research institutions, public and private sector) for profit and non-profit purposes as a dataset for use globally to accelerate the development of technologies for the detection of COVID-19. This sharing of data is described thoroughly in Virufy's posted privacy policies (https://virufy.org/privacy_policy/) and will require singning and adherence to a strict Data Transfer Agreement (DTA) for external parties. All uploading and downloading of study data will take place using secure transmission protocols, e.g. through AWS S3 bucket data transfers. Data recipients will be required to create AWS accounts with similar security measures employed by Virufy members, such as multifactor authentication. Proper security controls, including multi-factor authentication and training including information security and HIPAA-equivalent awareness will be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	administered to all Virufy research team members with access to participant data. Local clinical research staff will have already received training focused on the importance of protecting privacy & rights of participants.
Comment 3: Regarding the policy for owning intellectual property rights, The KGMU should have the right to own its contribution and it is expected for international agencies to concur with the KGMU team for using its data for some other purpose in future.	Has been discussed with the sponsor and the same will be covered as a part of the CTA as per the KGMU policies.
Comment 4: attach CTRI document as indicated on page 3.	It has been attached
Comment 5: CTA documents need to be enclosed. Necessary paperwork from international sponsors (Stanford, Virufy) and other collaborators (CMC Ludhiana) also needs to be enclosed.	We are in the process of finalizing the CTA and India Hub Team is working on it in collaboration with the sponsor.
Comment 6: While in point no. 11 there is no plan for reporting adverse event , it is further indicated that CRCs at each site will be responsible for reporting AE/ SAEs to Virufy and respective IRBs - - Why this discrepancy?	This as per each individual IEC requirements. Some IECs in India mandate reporting all adverse events with patients even if it is not related to study in any manner. This study is low risk and no AE is expected.
Comment 7: the title suggests smartphone based covid-19 cough detection but other type of patients are also included and may be with phasing covid the title may not justify selection - this may be discussed with collaborators and if sponsors feel it to be correct then the title may go as such.	The response from the sponsor for this comment is as follows "this is an effort to triage covid patients and thus the title. Other patient frequencies are being used to ascertain differences (could be considered control). We would like to keep the title."
Comment 8: Inclusion criteria are includes patients who have undergone RTPCR for Covid. Later it is indicated that RTPCR samples will be processed	Apologies for this. RTPCR will be done at the site and not in CMC Ludhiana for KGMU. KGMU samples will be tested as

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

at CMC Ludhiana. Kindly resolve this confusion.	per KGMU protocols and at KGMU. We do not envisage any change in practice at KGMU. Changes have been made in protocol.
Comment 9: Kindly indicate any other data apart from HEALTH INFORMATION COLLECTION SHEET that will be sent to Verify.	No data apart from health information sheet data and cough frequencies will be sent
Comment 10: Kindly indicate the methodology of voice / speech recording, the hardware used and sensitivity/ quality of microphone to be used as this is important for a proper voice that will be scientifically analysed later. The aim is to record a good quality voice - Will the hardware/ microphone be provided by Verify or who will bear the cost?	The cough frequencies will be recorded on a good quality standard mobile with high quality microphone. The hardware and app software will be provided by Virufy and Virufy will bear the costs.
Comment 11: Regarding point number 5, voice recording with any mask will not be scientifically correct. The mask needs to be standardized (surgical/ cloth/ N95 etc) for the speech to be recorded with it or else the quality of mask will interfere with the result.	The reviewer is right. Only surgical (3ply or 2ply) and cloth masks will be used for recording cough frequencies. N95 will distort recording.
Comment 12: Kindly indicate the calculation of the sample size for 1547 participants	Sample Size Calculation: We estimated, using two-tailed inference proportion, the minimum sample size as 1547 participants considering the number of positive cases patients with an allocation ratio of 1 to achieve a minimum power of 85% with alpha = 0.05. While this sample size is expected to be sufficient to train and test a statistically powerful deep learning model (primary endpoint), we plan to recruit more participants across our various study sites to increase the generalizability of the model to a global population, and allow for further stratification for secondary

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

		outcomes of the research. Overall sample size may be re-evaluated depending on weekly monitoring reports. For instance, if we find that there is a large effect size between COVID-19 positive and negative cough sounds, we will decrease the overall sample size needed for training of the machine learning model. In this case, subject data will be used for validation testing of the model in Phase Two of the study, as a larger testing sample will increase statistical power, generalizability, and relevance of the model. Sample should be representative of the global community to reflect region-specific phonological differences that may affect the algorithm's performance.
	Comment 19: Patient information sheet to be 3 attached as per the SOP of IEC/ IRB KGMU.	Patient Information sheet is attached as a part 1 of Informed consent form of the study.
	The above Comment forwarded to PI was reviewed by Secondary PR. ***The Recommendation of Secondary PR received on 31st March 2022*** • PI has cleared the objection raised & agreed to add Co-PIs from Medicine & Respiratory Medicine. • In response to comment 2 the PI has described the data safety procedures. • For comment 3 response of PI is acceptable • CTA documents yet awaited. • PI has given explanation & necessary rectification that need to be incorporated. • Patient information sheet should be as per SOP of IEC/IRB KGMU both in English & Hindi. **EC Comment:** As above **EC Decision:** Approval subject to modification of patient information sheet. ***Ref. code: 115th ECM IB/P4***	
5	Expedited review research proposal entitled "***Students and teachers' perceptions about factors that contribute to academic performance in undergraduate medical students***" submitted by Prof. Vimala Venkatesh, Department of Microbiology, King George's	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Medical University, U.P., Lucknow vide letter no. 1904/CA/2022 dated 31st January, 2022.

The above proposal forwarded to 2 PRs..

Sl. No.	Previous EC comment of First PR	PI response
1	The questionnaire has name and the marks of the student and hence the information brochure should mention that the data collected will have these details but the data will be anonymized later and will kept confidential.	The online consent form already contains the confidentiality clause, as does the information sheet at point 16.
2.	In such studies, can we call them healthy volunteers? I am not sure.	In the Ethical form (1-RV-1/2019), point 5, subject selection: subject selected is "Special group subjects, Students & Teachers. As there is no alternative in point 8 to the term healthy volunteer, this was chosen as the default option.
3.	The ethical proforma says, the information brochure for healthy volunteers is enclosed but the information sheet has the title as ' for patients'	This information format is not required in our study as an online form will be administered. However, the change has been effected in the information sheet to "Student & Teacher Information sheet"

The above responses forwarded to the First PR vide this office letter no. 2364/Ethics/2022 dated 25th March, 2022.

Recommendation of Secondary PR: Approved

EC Decision: Approved

Ref. code: 115th ECM IB/P5

Minutes of extraordinary Meeting virtually held on 04-03-2022

Extraordinary meeting of EC committee held on 4th March 2022 to streamline functioning of review of the proposals. it was attended by:-

1. Dr. Alok Dhawan - Chairman

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	2. Dr Akash Agarwal - Member 3. Dr DN Upadhyaya - Member 4. Dr Rajendra Nath - Member 5. Dr Anupam Mishra - Member 6. Dr Shally Awasthi - Member Secretary ***Recommendation of the Chairman & following EC Members:-*** 1. Dr A.A. Mahdi said that there are minor errors in the submission check list of the project. This may be done by the secretariat if it is strengthened with technical staff. 2. Dr Anupam Mishra pointed out that the scientific content of certain works needs strengthening. 3. Dr D.N. Upadhyaya pointed out that a lot of time is wasted by comments going back and forth between primary reviewer and PI. 4. Dr Rajendra Nath said that the SOPs be circulated again in the departments with a request to adhere to them. 5. Dr Shally Awasthi said that an excel sheet has been developed and that the projects sent for review to members will be maintained by date to tag turnaround time. 6. Dr Alok Dhawan said that if the Primary reviewer deems it necessary, the PI may be called to present the work in the EC meeting so that combined inputs of all members can be given for speedy redressal of issues. He said that the primary responsibility of EC is to examine the proposals from ethical perspective. Hence departmental RCs must ensure quality of scientific review. **Decisions:-** 1. Shally Awasthi to circulate SOP of EC to all the departments with a request to ensure adherence. 2. PIs to be called to present their work in the EC at the recommendation of primary reviewer. This will be in exceptional cases and not a norm. **EC Decision:** Noted
II-A	**New Proposal**
1.	Research proposal entitled ***"Predicting ear drum central perforation using AL protocol: a pilot study"*** submitted by Prof. Anupam Mishra, Head, Department of ENT, Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no. 591/ENT/2022 dated 12th January, 2022. **EC Comment:** • Kindly remove the names of foreign Investigators ***Dr. Anupam Mishra did not take part in the discussion and making decision.*** **EC Decision:** Modify and re-submit (Tracking changes in word format) ***Ref. code: 115th ECM IIA/P1***
2.	Research proposal entitled ***"Heavy metal level estimation in patient with complete heart block of unknown etiology: A pilot project"*** submitted by Dr. Ayush Shukla, Assistant Professor, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 2014/Cardio/2022 dated 10th January, 2022.

(Shally Awasthi)

Chairman, IEC

	EC Decision: Approved ***Ref. code: 115th ECM IIA/P2***
3.	Research proposal entitled "***Matrix metalloproteinases in angiogenesis and tumor invasion: clinicopathological impact in urothelial bladder carcinoma patients***" submitted by Prof. Apul Goel, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 39/URO/2022 dated 14th January, 2022. **EC Comment:** • Patient information sheet (Part-I) has no information about sample collection. It has to be modified in both English & Hindi. **EC Decision:** Approval subject to ***Ref. code: 115th ECM IIA/P3***
4.	Research proposal entitled "***Investigation of the human papillomavirus (HPV) infection type in head and neck cancer and its association with patient outcomes***" submitted by Prof. Ranjit Kumar Patil, Department of Oral Medicine and Radiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 63/OM&R/2022 dated 31st January, 2022. **EC Comment:** • Patient information sheet (Part-I) has no information Kindly provide document of clearance to send samples abroad. • What are the criteria for giving compensation? Kindly provide document of clearance to send samples abroad. **EC Decision:** Re-write and include procedures for formalir fixation of samples. ***Ref. code: 115th ECM IIA/P4***
5.	Research proposal entitled "***Indian trial of tranexamic acid in spontaneous intracerebral haemorrhage (Intrinsic Trial)***" sponsored by ICMR, New Delhi submitted by Dr. Praveen Kumar Sharma, Department of Neurology, King George's Medical University, U.P., Lucknow vide letter no. 32/Neuro/2022 dated 19th January, 2022. **EC Comment:** • Clarify what compensation will be given? What are the criteria for giving compensation? **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P5***
6.	Research proposal entitled "***To assess sociodemographic, clinical and serological profile of allergic bronchopulmonary aspergillosis (ABPA) patients***" submitted by Dr. Jyoti Bajpai, Assistant Professor, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 2291/2021 dated 30th December, 2021. **EC Comment:** • No case report from is there.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	• Patient information sheet has to give more details. **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P6***
7.	Research proposal entitled "***The HOLD study-stomach cancer elective surgery morbidity and mortality at 90-Day: A TUGS multinational audit***" sponsored by University of Sunderland, NHS Foundation Trust, England submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONS/143/2022 dated 28th January, 2022. **EC Comment:** • Complete the protocol check list of KGMU. **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P7***
8.	Research proposal entitled "***The outlive study-Oesophageal and Junctional cancer elective surgery morbidity and mortality at 90-Day: A TUGS multinational audit***" sponsored by University of Sunderland, NHS Foundation Trust, England submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONS/153/2022 dated 25th January, 2022. ***Recommendation of Primary reviewer:*** • Kindly attach patient information sheet as per SOP of EC KGMU. It is indicated in the annexure last page that patient information sheet is attached but no such enclosure is submitted. • Kindly enclose the protocol for data collection and explain the procedure in methodology. There is no indication of mortality parameters to be assessed as well as the anticipated factor as per second aim. • Kindly attach some document/ correspondence from the sponsor (University of Sutherland) • Kindly indicate the anticipated number of subjects to be recruited in study. • No case report form is enclosed as indicated on last page of annexure one. Kindly attach a copy. **EC Comment:** As above • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P8***
9.	Research proposal entitled "***A prospective, multicenter, observational study of bifurcation coronary stenting in India to determine clinical and angiographic outcomes (IBIS Registry)***" sponsored by Cardiovascular Research Society-Kerala submitted by Prof. Rishi Sethi, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 2052/Cardio/Res/2022 dated 27th January, 2022.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Primary reviewer: • Patient information sheet as per SOP EC KGMU to be attached • Signed copy of Clinical registry agreement need to be submitted before initiation of project • If budget is 250 INR per subject as indicated in budget then it should also be indicated in sponsor letter- why this discrepancy? • How will the budget be channelized in KGMU? a policy copy needs to be attached • While annexure indicates it is a natural and national industry the sponsor letter states that it is not industry - why discrepancy ?? • While annexure states that adverse events will not be reported, point number 11 indicates otherwise - why this discrepancy? • Kindly fill the following information in annexure a- Confidentiality of records b- Contact information c- Right to withdraw d- Consent form in English and Hindi e- Plan for interim analysis • In ICF the right to participation should include right to withdraw at any stage both in English and Hindi versions. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P9***
10.	Research proposal entitled "***Anesthetic challenges and perioperative management of pheochromocytoma and paraganglioma***" submitted by Dr. Shefali Gautam, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. Anaes/103/2022 dated 1st February, 2022. ***Recommendation of Primary reviewer:*** • Many entries in annexure need to be filled such as a- Vulnerable subjects b- Special group subjects c- Patient information sheet details d- Consent form details e- If risk is indicated as YES then indicate what is that risk d- What sort of physical/ social/ psychological / risk discomfort is feasible in this study. Kindly indicate. • How will you report adverse events in these four patients assessed retrospectively? • How will you do interim analysis in these four patients assessed retrospectively?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	• Copy of case report form/ protocol/ project questionnaire as indicated in annexure should be attached separately. • It has to be indicated as to how to obtain written informed consent retrospectively. Will the patients be called for assessment or the details be recorded through retrospective records. kindly clarify. • Kindly attach patient information sheet as per SOP EC KGMU separately if applicable in ICF "right of the participants" should include a statement indicating the right to withdraw from the study at any stage. **EC Comment:** As above **EC Decision:** Modify and re-submit (Tracking changes in word format) ***Ref. code: 115th ECM IIA/P10***
11.	Research proposal entitled ***"Assessment of trends and factors influencing smokeless tobacco use in Lucknow"*** submitted by Dr. Gaurav Mishra, Associate Professor, Department of Public Health Dentistry, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 58/PHD/2022 dated 10th February, 2022. ***Recommendation of Primary reviewer:*** • Patient information sheet as per SOP EC KGMU to be attached • Annexure 1 needs to be complete. Many information are not available such as. a- Sponsor information (yes or no) b- In 'subject selection' kindly indicate types of special group subjects c- Give response regarding risk and benefit d- Give response regarding data monitoring e- Give response regarding "Is their compensation for injury" • Give a brief detail about statistical analysis **EC Comment:** • As above **EC Decision:** Modify and re-submit (Tracking changes in word format) ***Ref. code: 115th ECM IIA/P11***
12.	Research proposal entitled ***"Knowledge, attitudes, and practices of School Teachers toward Oral Health in Uttar Pradesh, India"*** submitted by Dr. Sumit Kumar, Associate Professor, Department of Public Health Dentistry, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 66/PHD/2022 dated 4th February, 2022. ***Recommendation of Primary reviewer:*** • Kindly attach patient information sheet as per SOP EC KGMU (mentioned as attached in annexure) • Kindly complete following details of an excel in subject selection kindly

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	indicate which special group subjects in risk benefit kindly indicate is there social physical risk discomfort • Give a brief account of how sampling will be done how will the division or schools be selected whether age will be a criteria for randomly selected teachers. • Give a brief account of statistical analysis **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P12***
13.	Research proposal entitled **"*Lung oscillometry registry for patients with various Respiratory disorders and healthy subjects (LEAD Study)*"** submitted by Prof. Surya Kant, Head, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 99/2022 dated 24th January, 2022. ***Recommendation of Primary reviewer:*** • The sponsor information indicates that private sponsor is both from India as well as international. The name is not indicated. There is no address indicated as well. Kindly indicate the name of sponsor and its correspondence with principal investigator officially. • A few responses in annexure are left blank such as use of existing/ leftover samples • The study procedure indicates that study is going on in "18 different centres of the world". The list of investigators attached show 18 centres in India - So what other centres of world are collaborating in this international sponsored private party research? Kindly indicate. • Kindly also mention the various centres where these 18 investigators are based in India. Who is the lead person? Will multi-centre data be combined for analysis? If yes then where exactly the analysis will be done? What will be the situation of intellectual property rights issue?? • Give a brief account on outcome parameters and statistical analysis • What is the speculated sample size overall and in KGMU (expected). • While undertaking by principal investigator indicates that it is a multicentric international study, the name and address of other medical institutes/ Hospital is missing. • In executive summary the methodology indicates "following locations in India as well as from international countries" - but neither any Indian nor foreign Centre is mentioned. • The methodology selection further states that data will be captured at clinics and hospitals while study Centre (in material and methods) indicates only

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	KGMU. Kindly resolve the discrepancy. • The only single investigator maybe overburdened with this non-funded study. Will it be feasible all alone by a single investigator? **EC Comment:** • As above **EC Decision:** Modify and re-submit (Tracking changes in word format) ***Ref. code: 115th ECM IIA/P13***
14.	Research proposal entitled "***Traumatic Anterior cruciate ligament injury: A study on the prognostic implications of Vitamin D and micronutrient supplementation***" sponsored by UPCST submitted by Dr. Kumar Shantanu, Additional Professor, Department of Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no. 1695/OS/2022 dated 4th February, 2022. ***Recommendation of Primary reviewer:*** • Sample size calculation missing • ICF of both English and Hindi version should be an exact replica • Patient information sheet in hindi need to be attached • In use of "biological hazardous material" it is indicated that collection for banking / future research is applicable - kindly indicate in detail about the material to be stored and incorporate the patient consent accordingly. The same is true for use of organ and body fluids • The " risk and benefit" in annexure need to be addressed properly • Where is the CV for non-KGMU investigators as per indicated in annexure. • Brief some outcome parameters and their relevant statistical analysis **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P14***
15.	Research proposal entitled "***A comparative prospective study of the various parameters of the wave like involuntary movements in scrotum in apparently normal individuals and patients of hydrocele, varicocele and primary idiopathic infertility***" submitted by Prof. D. Dalela, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 536/URO/2022 dated 28th December, 2021. ***Recommendation of Primary reviewer:-*** • This is a pilot study. It should be mentioned in the title. • The term "various parameters" is vague. Research hypothesis should be defined properly after identifying the parameters. • Sample size is not required, as it is a pilot study, but the data analysis section should be properly addressed. **EC Comment:**

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P15***
16.	Research proposal entitled "***Outcomes of surgically addressed impacted injury in the patients of acetabulum fracture***" sponsored by ICMR, New Delhi submitted by Dr. Dharmendra Kumar, Additional Professor, Department of Orthopaedic Surgery, King George's Medical University, U.P., Lucknow vide letter no. 1699/OS/2022 dated 7th February, 2022. ***Recommendation of Primary reviewer:-*** • Title should be "Assessment of outcomes……." • The proposal is incomplete. There is no research hypothesis, no sample size calculation, no methodology, no statistical analysis section. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P16***
17.	Research proposal entitled "***Study on patient satisfaction and psychological well-being of patients on oral anticoagulant therapy after atrial fibrillation (AF), arterial or venous thromboembolism (VTE)***" submitted by Dr. Sujita Kumar Kar, Additional Professor, Department of Psychiatry, King George's Medical University, U.P., Lucknow vide letter no. 176/Psy/2022 dated 4th February, 2022. ***Recommendation of Primary reviewer:-*** • The primary objective and secondary objectives are being mixed. • The primary objective uses cross-sectional (observational) design, whereas the secondary objective uses prospective comparative study. • The focus should be on primary objective, as the sample size, methodology etc. will be different for two kind of designs. • Sample size calculation is not clear. What is the formula used? • Data analysis section is also vague. It just give the terms: Ftests- ANOVA: Repeated measures, within factors. This makes no sense. **EC Comment:** • As above **EC Decision:** Modify and re-submit (Tracking changes in word format) ***Ref. code: 115th ECM IIA/P17***
18.	Research proposal entitled "***Knowledge, attitude and practice of Paediatric trauma management among the health care workers providing trauma care in government run major Hospitals of Lucknow: A questionnaire based study***" submitted by Dr. Vikas Verma, Associate Professor, Department of Paediatric Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no.1600/PaedOrtho/2022 dated 17th February, 2022.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated. 2nd April, 2022

	Recommendation of Primary reviewer:- • The title should be "Development and validation of a questionnaire to assess Knowledge, attitude modify accordingly. • The methodology to develop, assess reliability and validity of the questionnaire should be given in detail. For example, what kind of "validity" is required for the present situation? **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P18***
19.	Research proposal entitled "***Assessment of Death certificates filled by medical professionals during the COVID pandemic***" submitted by Dr. Shiuli, Assistant Professor, Department of Forensic Medicine & Toxicology, King George's Medical University, U.P., Lucknow vide letter no. 291/FMT/2022 dated 31st January, 2022. ***Recommendation of Primary reviewer:-*** • In evaluating the death certificates, the prevalence of "attributes of discrepancies" should be reported. These should be arranged in an increasing order. • This will give an idea of worst to best area of discrepancies. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 115th ECM IIA/P19***
20.	Research proposal entitled "***COVID third wave: profile of patients at a L3 Centre***" submitted by Dr. Shrikant Srivastava, Additional Professor, Department of Geriatric Mental Health, King George's Medical University, U.P., Lucknow vide letter no. 1438/DGMH/2022 dated 3rd February, 2022. ***Recommendation of Primary reviewer:-*** • Approved **EC Decision:** As above ***Ref. code: 115th ECM IIA/P20***
21.	Research proposal entitled "***A naturalistic study of obsessive-compulsive disorder-A retrospective chart analysis***" submitted by Dr. Shrikant Srivastava, Additional Professor, Department of Geriatric Mental Health, King George's Medical University, U.P., Lucknow vide letter no. 1395/DGMH/2022 dated 11th January, 2022. ***Recommendation of Primary reviewer:-*** • Approved **EC Decision:** Approved ***Ref. code: 115th ECM IIA/P21***

1 Supervisor & 3 cosupervisors from the same department please decrease the number or mentioned their unique roles.	Attached Separately
Sponsor information incorrect	Attached separately
Vulnerable/ special groups not ticked in IEC form	Attached separately
Privacy/ confidentiality section filled incorrectly	Attached separately
Use of biological material not filled	Attached separately
Detailed of consent not filled in IEC form.	Attached separately
Risk is mentioned as not reasonable	Attached separately
Benefits of video laryngoscopy are already known. Why this study	As most of the studies with videolaryngoscopy involved only normal patient. There are very few studies which compared videolarynoscope and macintosh laryngoscope during tracheal intubation in patients with cervical spine injury.
Conventional laryngoscopy in patients with cervical spine injury increases the risk of further trauma. Having video laryngoscopy which is less risky and still	Conventional laryngoscopy is still the standard of care in most of the centres with proper safety measures such as MILS. In this study both the groups with

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

doing laryngoscopy with a technique which is risky, will be unethical. Suggest this study be conducted in patients who may not be at risk of spinal trauma.	videolaryngoscope and conventional laryngoscope the safety measure is followed to reduce complications due to movement of spine.
Informed consent doesn't mentioned details of complications due to spine movement and due to fluoroscopy usage.	Attached separately

The above comment forwarded to the P.I., Reply given by P.I. was reviewed by the Primary reviewer with his second opinion.

Comment:

- The roles of investigators are still overlapping
- The PI proposes to document spinal movement during intubation in patients with spinal injury while knowing that spinal motion will be by viewers to the patient's wellbeing. Manual inline stabilization, if applied well, will not permit movement and thus the PI will not be able to document spinal movement for his thesis. If it is not applied well and movement is documented on fluoroscopy the PI will be threatening the patient's will being. This is UNETHICAL and cannot be permitted.

Previous PGTSC Comment:

- This is an observational study primarily for finding prevalence of persistent pulmonary hypertension of neonates.
- It should not be used for predicting the risk factors.
- One use of a cross-sectional study is to determine the association between an outcome variable and some **explanatory variables**, for example to estimate the prevalence of a disease, perhaps as a function of some explanatory variables. An association between outcomes and explanatory variables may suggest causality, although a causal link usually cannot be established from a single cross-sectional survey because such studies give no information on the temporal ordering of possibly causal events.

Inclusion criteria unclear.	**Inclusion criteria-** • All pregnant women who have been admitted with complaint of preterm labour pain from antenatal clinic will be enrolled for the study. • According to ACOG definition Preterm labor is defined as onset of regular uterine contractions with progressive cervical changes between period of gestation of 20 weeks to 37 weeks.
No mention of statistical analysis/how data will be analyzed	**Statistical analysis-** The statistical analysis will be done using latest version of SPSS (Statistical Package for Social Sciences) statistical analysis software version 23rd. categorical variables will be presented as mean ± SD. Quantitative variables will be compared using unpaired-t-test. Qualitative variables will be compared by using chi- square test/Fischer's exact test. Correlational coefficient will be used to check the strength of linearity.
Too many Co-PIs case management is not reason enough to be part of a research project; one has to actively participate in it. Justify.	Your advice to reduce my co-PIs has been very well taken but these documents have been submitted to Dean Office long time back. So, if possible please consider the same with continuing with same Co-PIs for this time. Your suggestion will be very much considered in future correspondence.

Minutes of 116th ECM held on 28th May, 2022

(Registration No.: ECR/262/Inst/UP/2013/RR-19)

Minutes of 116th "Institutional Ethics Committee" Meeting ***virtually*** held on 28th May, 2022 from 10.30 AM.

The following Members were present in the Meeting:-

1. Prof. Alok Dhawan -Chairman
2. Prof. G.G. Agarwal -Member
3. Prof. Shubha R Phadke -Member
4. Mrs. Vasundhara Kumar -Member
5. Mrs. Akansha Dubey -Member
6. Mr. Ujjawal Krishna -Member
7. Dr. Akash Agarwal -Member
8. Dr. K.K. Yadav -Member
9. Prof. A.A. Mahdi -Member
10. Prof. Rajendra Nath -Member
11. Prof. Anupam Mishra -Member
12. Prof. Anita Rani Singh - Member
13. Dr. D.N. Upadhyaya -Member
14. Dr. Shally Awasthi -Member-Secretary, IEC

I-A	Action taken
1-	Clarification of research proposal entitled "***Formulation, optimization and evaluation of apigenin and cardamom essential oil based emulgel for mitigation of oral submucous fibrosis***" sponsored by ICMR, New Delhi submitted by Ms. Sarita Pal, Ph.D. Scholar 2019 under the guidance Dr. N.P. Yadav & Prof. U.S. Pal, Co-PI, Department of Oral and Maxillofacial Surgery, FODS, K.G's Medical University, U.P., Lucknow vide letter no. 463/OMFS/22 dated 20th May, 2022.

Previous EC Decision	PI response
Budget not mentioned	15 Lacs sanction by ICMR
Risk is not reasonable, why do the study?	The biopsy is advised in any potentially malignant lesion and oral submucous fibrosis (OSMF) is also a potentially malignant disorder so, to rule out any

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	malignancy biopsy should be advised, despite having minor risk.
Biopsy is an invasive procedure with discomfort, risk of complications: need to have a compensation policy.	The biopsy will be taken as routine treatment of OSMF. It will be divided into two pieces. One piece will be sent to the research laboratory (CSIR-CIMAP) for the development of a new drug. Another one will be sent to the pathology department (KGMU) for a histopathology examination. Diagnosis will be made and treatment will be given accordingly.
KGMU should have its own PI answer researcher outside KGMU will not be interaction with patients.	This study is conducted with the help of Dr. U. S. Pal (Prof., Department of Oral and Maxillofacial surgery). He is also serving as a Co-PI in this study.
Right to participation (Consent form): tissue sample is patient's property and rights can't be waived off.	We agreed with the comment. The consent for the tissue excised from the patient will remain to the patient.
Outcome measures are not in sync with aim/objectives.	This project belongs to the ICMR and the funding agency has already evaluated the aim and objective of the project and the project has been sanctioned in 2019. The aim of our present study is 'To evaluate the therapeutic potential of emulgel prepared from apigenin or cardamom essential oil in a human buccal mucosal sample of Oral Submucous Fibrosis'.

The above comment forwarded to the P.I. which was reviewed by PR:-
Recommendation of PR.

- List of queries raised previously and their clarifications have not been attached. Please ask the researcher to do the needful.

EC Comment:

- As procedure is carried out regularly, no additional risk. Can be approved.

EC Decision: Approved

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Ref. code: 107th ECM II B-Ph.D/P1

2- Clarification of research proposal entitled ***"Study of T regulatory cells, soluble cytotoxic T lymphocyte associated antigen-4 and transforming growth factor-β1 in patients of chronic myeloid leukemia on dasatinib therapy"*** sponsored by ICMR submitted by Dr. Akanksha Singh, Ph.D. Scholar 2019 under the guidance Prof. Rashmi Kushwaha, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no.573 dated 26th April, 2022.

Previous EC Decision	PI response
Hindi translation of ICF needs correction so that it is meaningful.	Attached separately

EC Decision: Approved

Ref. code:110th ECM IIB-Ph.D./P1

3- Clarification of research proposal entitled ***"Skin flap necrosis after knife or electrocautery in patients undergoing inguinal lymph node dissection (SNAKE): a double blind randomized clinical trial"*** submitted by Dr. Shiv Rajan, Assistant Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no.SONC/788/2022 dated 21st May, 2021.

Previous EC Decision	PI response
Since only patient is blinded but not be investigator, this can be a single blind trial only.	This is a double blinded trial as mentioned in the protocol section under the heading blinding. Because among the patient, operating surgeon and outcome accessor only operating surgeon will know the surgical intervention. The patient and the outcome accessory will remain blinded to the surgical intervention (Treatment assigned). We believe doing this study as double blind research will add strength to it. Therefore we would like to continue it as a double blind study

The above comment forwarded to PI reply received. <u>The above proposal already approved by PR but above is EC objection.</u>

EC Decision: Approved

Ref. code:113th ECM IIA/P19

4- Clarification of research proposal entitled ***"Management of ROCM: A clinico-radiological study- An institutional experience"*** submitted by Dr. Rajat Jain, Assistant Professor, Department of Otorhinolaryngology, Head & Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no.240/ENT/R/22 dated 23rd May, 2022.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Previous EC Decision	PI response
The title has short form which is not explained. I do not know what is ROCM. On the page 11 of 13, the full form is mentioned. Rhino Oculo Cerbral Mucormycosis.	All the abbreviations used in this research proposal proforma have been explained under the heading "Abbreviation used'
5-vi-No answer about vulnerable subjects.	It is a retrospective study there will be no direct involvement of subject during the course of the study.
It is mentioned on point 8, that the written consent will be taken and patient information brochure is attached. But there is neither of them	Patients presented to us curing the epidemic of nucormycosis. All clinically and mocroboloially confirmed cases were admitted and written informed consent was taken from each patient before surgery. Since the study is a retrospective analysis of data there is no requirement of consent forms. Hence not attached.
It is retrospective analysis of data. Please confirm if consent will be taken or not. If the answer is 'yes' provide appropriate document.	-----
It is mentioned that the patient will be directly benefited. How?	This is the first episode of mubcormycosis epidemic all over India till date. No definitive management protocol has been established till date in the country. This is a single centre study. We have formulated management protocol which will benefit mucormycosis patients in for coming years.

The above comments forwarded to PI which was reviewed by Primary reviewer with following comments.

Second opinion of PR	PI response
Abbreviation should not be used in the title	The Title has been changed entitled ***"Management of Rhino-orbito-cerebral mucormycosis (ROCM) : A clinic-radiological study- An institutional experience"***
Written consent for surgery is different from the written consent for participation	Since this is the Retrospective study, consent for research purposes was taken

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

of the study	alongwith consent for surgery. So, we are using the same consent for the study.
Management was done based on the protocol is helpful for the patient. But study is not benefitting the patient directly.	Mucormycosis epidemic happened during covid pandemic. Never before in the history of mankind such use mucormycosis patient have been dealt with. So no proper protocol was available in literature thus we have developed a protocol for management of patients of mucormycosis which will benefit forthcoming generations.
The permission for the retrospective data analysis should be taken, Appropriate modifications in the application are needed.	The permission for data analysis was taken at the time of admission/ surgery.

EC Decision: Approved

Ref. code: 114th ECM IIA/P3

5- Clarification of research proposal entitled "***Antifungal sensitivity based management of COVID-19 associated Rhino-Orbital-cerebral mucormycosis (C-ROCM)- an outcome-based pilot analysis***" submitted by Dr. D. Himanshu, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no.831/MED/22 dated 27th April, 2022.

Previous EC Decision	PI response
Details of medical/surgical management protocol missing.	Possible C-ROCM will be evaluated by nasal endoscopy. Based on imaging and laboratory evidences the ROCM will be divided into probable and definite form. Surgical management will be done on the basis of different stages given by Malhotra et al (8). The scope of surgery may vary from local resection to radical resection of the involved segment/area.
Details of follow-up missing.	The patient will be called for follow up after one month till 6 months.
Clinical end point of treatment/follow-up missing.	For treatment of ROCM either parenteral or oral forms of Isavuconazole are

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		recommended. Posaconazole has also been used for treatment though it is preferred as a prophylactic agent for mucormycosis in transplant patients. Other than these two novel azoles, Itraconazole and Terbinafine have also been tested for their efficacy. Glycaemic control is also an important factor in management of patients with mucormycosis.
	ICF does not details of consent person	Supportive document - ANNEXURE: 8-RV-1/2019 (SOP-IEC-KGMU) ANNEXURE: 9-RV-1/2019 (SOP-IEC-KGMU) has been attached

The above comment forwarded to PI was reviewed by PR: Provisionally approved

EC Decision: Approved

6- Clarification of research proposal entitled ***"International severe Asthma registry (ISAR)"*** submitted by Prof. Surya Kant, Head, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no.403/RES/MED/22 dated 29th March, 2022.

Previous EC Decision	PI response
It is a multi country, multicentre observational study with a sample size of just 20-25 subjects. Sample size calculation shall be mentioned.	In International severe Asthma registry (ISAR) study, primary data collection (via eCRFs) will contribute to the development of a web-based platform to host the ISAR. Being a registry there is no sample size calculated for this specific initiative but the minimum expected **site-specific** sample size is between 20-25 patients.

The above comment forwarded to PR.

Recommendation of PR: Provisionally approved.

EC Decision: Approved

Ref. code: 114th ECM IIA/P7

7- Clarification of research proposal entitled ***"Comparison of percutaneous vs open hamstring lengthening in patients of spastic diplegic cerebral palsy"*** submitted by Dr. Syed Faisal Afaque, Assistant Professor, Department of Paediatric Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no.1749/Paed.ortho/22 dated 10th May, 2022.

The above comments forwarded to PI reply have given by PI which was reviewed by PR with following opinion.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	RV-1/2019 (SOP-IEC-KGMU) ANNEXURE: 9-RV-1/2019 (SOP-IEC-KGMU) has been attached

			edition). (based on equation 8.27). 2. Turhan Y, Arican M. Clinical Comparison of Percutaneous and Open Hamstring Lengthening in Children with Spastic Cerebral Palsy. Medeniyet Med J. 2019;34:182-7.
	2.	In budget section Rs 10,000/- is indicated under "Research Associate" – Is that just for one time or for every month considering the duration of project to be 1.5 years. In later case, the yearly head would be 120000. Also check the salary for a research associate. It must be at par with ICMR norms	In budget section, Rs 20,000 is indicated under "Research Associate" which is just for one time.
	3.	Many points in Annexure 1 need to be filled up	Duly filled
	4.	This type of study seems to be more of outcome of surgical comparison than epidemiological as indicated. Hence, clinical category would be more appropriate	Author agrees with suggestion and now choose clinical type of study.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

5.	Type of patients should be patients instead of volunteers as indicated	Rectified
6.	Patient information sheet is not attached	Attached

Second opinion of PR:

- The PI has clarified majority of points except that the rationale for one time single payment of Rs.20,000/- to Research Associate does not correlate with ICMR norms. Moreover the Hindi version of patient information sheet will needs to be incorporated.

The above comment again forwarded to the PI reply received by PI with following:

- The Principal-Investigator will manage the work of Research Associate therefore Research Associate is not required and the PI will ensure that it will not affect the quality of work.

EC Decision: Approved

Ref. code: 114th ECM IIA/P16

8- Clarification of research proposal entitled ***"Correlation of serum angiopoietin-1&2 & endothelin-1 with severity of pulmonary hypertension (PH) in patients of chronic obstructive pulmonary disease (COPD)"*** sponsored by Research Cell KGMU Lucknow submitted by Dr. Jyoti Bajpai, Assistant Professor, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 540/22 dated 4th May, 2022.

Previous comment	PI response
This is correlation study. The sample size formula is inaccurate as it is for prevalence study	We are thankful to reviewer for correcting us, as suggested we have re-calculated the sample size and mentioned the study variables. Also, we have merged the answers of first three comments for easy

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

The study variables (variables for finding correlations) are not properly identified.	understanding. Pulmonary hypertension (PH) is a fatal disease, and chronic lung disease viz COPD can cause PH. The co-existence of COPD and cardio vascular disease (CVD) is frequent and perhaps be inter-related via inflammation-related processes reflected by specific markers like endothelin-1, angiopoietin 1 and angiopoietin-2. Here, we wish to detect a simple correlation r (r=0.4) of N observations between PH and COPD patients. Here, we want to determine the serum levels of endothelin-1, angiopoietin 1 and angiopoietin-2 in three study groups- COPD (without PH), COPD+PH(with PH), and healthy individuals. Additionally, we will see the correlation of these markers with COPD and PH disease staging; as we know that PH is divided into three groups on the basis of mean pulmonary artery pressure(mPAP) [mild (20-40 mmHg), moderate(41-55mmHg), severe(>55mmHg)], and COPD has also mild (predicted FEV_1%, ≥80%), moderate (predicted FEV_1%, ≥50% to <80%), severe (FEV_1%, ≥30% to <50%), and very severe (predicted FEV_1% , <30%) category. Hence, using a two sided test, 5% significance level test (α=0.05) with power 80% power (β=0.2). Putted the value of r, α, and β in online available software:
Sample size can be calculated after identifying variables only.	

Second opinion of PR

- Outcome measures have to be mentioned.
- Has data already been collected?
- I.C.F. and patient information sheet to be submitted.
- Define role of KGMU.

The above comment forwarded to the PI was reviewd by PR:- Provisionally approved

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

EC Decision: Approved

Ref. code: 114th ECM II B-IMR-F/P1

9- Clarification of research protocol no.CKJX839B12302 entitled "***A randomized, double-blind, placebo-controlled, multicenter trial, assessing the impact of inclisiran on major adverse cardiovascular events in participants with established cardiovascular disease (VICTORION-2 PREVENT)***" sponsored by M/s Novartis Healthcare Pvt. Ltd submitted by Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow, vide letter no.04/Cardio/Res/22 dated 7th April, 2022.

Previous EC Decision:

- To the question 14-the answer is that the type of genetic testing to be done has not been decided yet. In that case the investigators cannot collect the samples of patients for genetic testing without telling what type of genetic test will be done. In that case the consent for DNA testing cannot be taken and staples cannot collect.

Previous comment	PI response
Is the sample size is based on 32% of general population suffering from dry eye. This is incorrect.	Sample size justification: $\mathbf{n = Z_{\alpha/2}^2 * p*(1-p) / MOE^2}$, and $Z_{\alpha/2}$ is the critical value of the Normal distribution at $\alpha/2$. For a confidence level of 95%, α is 0.05 and the critical value is 1.96, MOE is the margin of error, p is the sample proportion. MOE is considered 0.05 to produce good precision and smaller error of estimate. Considering p= 0.32, n= 334 and with 10% dropout sample size is approximately 370. Additionally, difference in eye dryness score was reported to be 12.55-unit between treatment groups computed as mean change from baseline to week-12 and a common standard deviation (SD) of 28.6 units were assumed on the basis of findings from a previous phase III trial. This yielded a sample size of 206 in both arms with a power of 90% and 10% dropout. However, when this sample size was submitted to DCGI for approval, they requested a larger sample size considering the product is newly introduced in the Indian market. Hence, the former sample size estimation was used for the trial. If the power is increased to 99% this assumed difference between the two arms would yield a sample size of 370 subjects.
Sample size calculation: Statistician to give opinion.	Stated above

Previous EC Comment	PI response
Kindly provide outcome parameters.	The primary outcome parameter is the complication developed after discharge.
Without knowing, what information is retrieved from the patient, waiver cannot be confirmed.	The other data retrieved will be age and gender of the patient, reason/diagnosis at admission length of ICU stay and complications after discharge from ICU.
Also, as the time frame has been fixed, it would be better to consider calculation of sample size.	As this is a pilot study we don't have previous studies to calculate the sample size, so will include all the patients enrolled for OPD visit in one year duration. The power of study will be calculated later during statistical analysis.

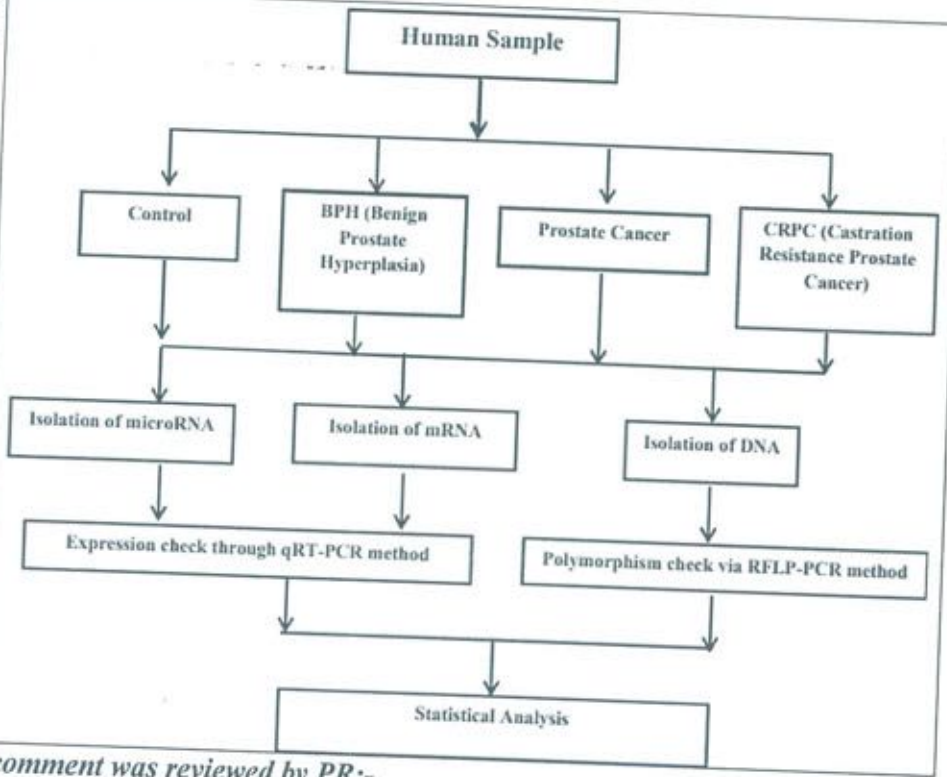
Previous EC Comment	PI response
Sample size	The sample size is calculated as per the ICMR statistics of 7.5% incidence



(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Sample size discrepancy is there in total (350 in SOP form) and difference in grouping written in inclusion criteria (n=50) and sample size calculation (n=33). Please give exact total sample size and correct the discrepancy in number of cases in each group. (In methodology it is not clear that Blood and Tissue samples will be taken from same or	The sample size is calculated as per the ICMR statistics of 7.5% incidence and consulted with the statistician. It has been calculated that each group i.e, BPH, Prostate Cancer, and CRPC must *include 33 cases*. However, we *increased the sample size in each group from n=33 to n= 50* to *validate the* significance of the study. As per our study design, we will take blood and tissue samples from BPH and Prostate Cancer and only blood samples from control and CRPC. From the same individual BPH patient, adjacent tissue will be taken as control to compare miRNA expression with diseased tissue. As mentioned in our ethical proposal, we will take adjacent healthy tissue samples from BPH patients (operated by TURP) as control and compare them with BPH tissue (operated by TURP) and prostate cancer tissue (operated by TRUS) of the cases. The tissue samples are significant for study since Epithelial-Mesenchymal Transition (EMT) is a tissue-based phenomenon and we are trying to explore and correlate its significance in a less invasive manner by comparing miRNA tissue expression with blood.

(Alok Dhawan)
Chairman, IEC

Majeure. This needs to be revised as per other CTA formats followed by the University.	the Trial. **Dispute Resolution:** Dispute resolution clause already mention on point no.-21.3. **Force Majeure:** In the event a party is unable to comply with obligations under this Agreement due to circumstances beyond its control, such as an earthquake, hurricane, blizzard, flood, tornado, fire, act of God, other similar catastrophe, war, riots, terrorism or other debilitating action of a third party, such party shall be excused from such obligation for such period of inability, provided that the excused party shall take reasonable steps to remedy such noncompliance once it is able.

- The above comment was forwarded to PR.
- Why alternative to treatment not offered in IEC form?
- Why contact information not checked?
- IEC form mentions that no biological material will be taken from the patient. However, the consent form mentions, explicitly, that biological samples will be collected/ stored for further use(pg 23 of 37). Please explain

32- Clarification of research protocol no. ICR/19/007 entitled ***"A prospective, multi-center, single arm, phase IV study to assess the safety and efficacy of dienogest tablets in management of pelvic pain associated with endometriosis"*** sponsored by M/s Sun Pharma Laboratories Ltd. submitted by Prof. Sujata Deo, Department of Obstetrics & Gynaecology, King George's Medical University, U.P., Lucknow vide letter no. GO/CT/05/22 dated 4th May, 2022.

Previous EC Comment	PI response
Legal opinion: A clause on Insurance may be added.	Insurance clause will be incorporated in the CTA in section 13.3. stating that **Sponsor/CRO will provide and insurance policy to cover conduct of Clinical Trial, in accordance with applicable national laws, is in place.**
Legal opinion: In clause 22 the place of arbitration may be changed to Lucknow for convenience.	**Lucknow** has been added in the arbitration clause of the clinical trial agreement.
How they reached sample size of around 232 peoples' not explained	Kindly refer **Statustical method** section mentioned in page number **14** in the **study protocol** stating that " A Proportion Test using Normal Approximation with a 5% two-sided significance level assuming 6.5% margin of error and incidence rate for adverse event of 31.5%, a sample size of 232 subjects will be required. Attrition rate due to various reasons were factored up to 15" To achieve enrollment target number, 14 sites across PAN India would be taken and there would be competitive enrollment across all the site.
The drug is New Drug, not IND:	This has been rectified, was checked

Legal Query: • I have reviewed Mr Verma's CTA. It does not have important provisions related to Insurance, Dispute Resolution and Force Majeure. • We may include the aforementioned issues before moving forward with this CTA	**Response:** As suggested by your good office, please find enclosed the revised draft CTA with *Force Majeure* clause included as section no. 25 of CTA for your kind perusal (**Encl. 2**). The provisions related to insurance and dispute resolution have already been covered in section 12.2 and section 28 in this CTA.
Section 5-1-2 Consent form Missing	Response: Please find enclosed the informed consent document for this clinical trial including the subject information sheet and informed consent form for your kind perusal. Please also find its translation in and back-translation of *Hindi* language along with translation and back-translation certificates for your kind perusal.
How they reached sample size of '900 children' not explained	Response: The sample size justification

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	certificate was already enclosed as an appendix to the clinical trial protocol submitted to your good office (refer section no. 20.8 of protocol). Please find enclosed the same sample size justification certificate for your kind reference.
The drug is New Drug no IND: Wrongly checked in form DSMB details?	Response: We wish to kindly inform your good office that both typhoid Vi conjugate vaccine (TCV) and Measles & Rubella vaccine (MR) of M/s. Cadila Healthcare Ltd. have already approved by the Central Licensing Authority for marketing in the country. Please find enclosed proofs of approval of both the vaccines for kind reference. Therefore, both these vaccines are not considered as either IND or new drug; and hence, according to us, there should be no requirement of the DSMB in this phase IV clinical trial. This has been rectified, was checked inadvertently. Please find attached corrected form for your reference.
Insurance has expired in March, 2022.	Response: Please find enclosed renewed clinical trial insurance policy valid from 20th March, 2022 to 19th March, 2023. The above clinical trial is included at Sr. No. 1 in the annexed list of clinical trials covered under this insurance policy.

SONC/763/22 dated 12th May, 2022.

Previous EC Comment	PI response
Whether Prof. Vijay Kumar, Surgical Oncology, KGMU UP, Lucknow was the part of original Research Protocol?	Yes, Prof. Vijay Kumar, Surgical Oncology, KGMU UP, Lucknow was a part of the original Research Protocol as a CO-PI in the project.
In absence of PI (Dr. Neetu Singh) the approval of change or addition of PI & Co-PIs will have to be taken first from sponsoring authority (CSIR, New Delhi)?	The approval of change of PI (Prof. Vijay Kumar in place of Dr. Neetu Singh) and addition of Dr. Naseem Akhtar, Additional Professor, Surgical Oncology Department, KGMU as a CO-PI in the project has been approved by the sponsoring authority. The letter of approval is enclosed with this letter.
Approval for extension can only be given after it has been approved by sponsoring authority and also submitting the Original protocol with sponsor documents.	The request for extension has been approved by the sponsoring authority CSIR-CDRI. The proof of the same is enclosed with this letter.

Micro Labs Limited submitted by Prof. S.K. Bhasker, Department of Ophthalmology, King George's Medical University, U.P., Lucknow vide letter no.191/OPH/22 dated 7th May. 2022.

Recommendation of Primary reviewer:

- Insurance policy should be revised as it is ending on 03-02-2022.

Legal opinion

- 1-There is no provision relating to Force Majeure in this agreement. This may be added to cover any unforeseen situation in the future.
- There is no Dispute Resolution clause in the agreement. This may be added to ensure that arbitration is the primary mode of dispute resolution.
- In Clause 26 of the Agreement the exclusive jurisdiction of Mumbai is referred to while this may be changed to Lucknow.

The above comment forwarded to the PI was reviewed by legal expert:-

Recommendation of legal expert: Approved

Also the insurance is valid till February, 2023.

EX9536-4388 SELECT-***"Semaglutide effects on cardiovascular outcomes in people with overweight or obesity"*** submitted by Prof. Rishi Sethi, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 64/Cardio/Res/22 dated 30th April, 2022. **Death** **Subject ID no. 253703** **Subject Initial:** A-K-Y **Gender:** M **Age:** 58 years-01-10-1964 **Date of enrollment:** 28th May, 2018 **Patient follow up under study:** Randomization visit 2, visit 3, visit 4, visit 5, visit 6, visit 7, visit 8, visit, 9, visit, 10, visit, 11, visit, 12, visit, 13, visit, 14, visit, 15, visit, 16, visit, 17 **Weight:** 64.0 KG **Height:** 157.0 cm **Subject History:** Site staff made a follow-up call to the subject on 30th April, 2022 around 12:30 hrs. Subject's family member revealed that the patient passed away on 3rd March, 2022 at 11:00 AM. Subject's relative informed that subject had a severe headache for which he was taken to the nearby hospital on 25th February, 2022, his CT scan report showed intracranial hemorrhage, his condition was serious, life-threatening, and untreatable, So the subject was discharged on 2nd March, 2022 and next day expired at home. No autopsy was done and family members destroyed all papers after cremation. ***Recommendation of Primary reviewer:*** • SAE (death) of the patient seems to be due to disease outcome (FUC of Inferior wall +RVMI/STK+) and sudden intracranial hemorrhage (by CT Report) and not due to intervention (Semaglutide SC) as patient had taken intervention for about 3 years and was followed up to 17th visit and was planning for 18th visit on 23-04-2022

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Causal relationship cannot be established as death occurred after developing intracranial hemorrhage and he expired next day at home. No autopsy was done. (Death certificate attached) **ADR sub Committee Decision:** • Submit to DCGI ***Ref. code: 92nd ECM IIC/P1***
B	**NON-DCGI**
	Minutes of **"ADR Sub Committee"** of **"Institutional Ethics Committee"** Meeting ***virtually*** held on 28th May, 2022 from 10.00 AM. ***The following Members were present in the Meeting:*** 1. Prof. Alok Dhawan -Chairman 2. Mrs. Akansha Dubey -Member 3. Mrs. Vasundhara Kumari -Member 4. Mr. Ujjawal Krishna -Member 5. Prof. Rajendra Nath -Member 6. Dr. D.N. Upadhyaya -Member 7. (Alok Dhawan)
Chairman, IEC

	Subject History: The contact was made to get long term follow up Site person made several long term extension calls for follow-up visit but call was not answered. They tried again on 7th April, 2022 around 11:15 AM. Subject's LAR informed that she passed away on 4th October, 2021 at around 5:00 PM. The LAR revealed that patient had a complaint of weakness, and breathlessness for which she was taken to the hospital and expired on the way to the hospital. She was not hospitalized hence no papers are available and autopsy was not done. Only Death Certificate received. ***Recommendation of Primary reviewer:*** • The subject was enrolled on 28-05-2018. According to this her 30th month follow up would have fallen in November, 2021. The SAE was, however detected on 7th April, 2022. Explanation may be sought for the skipped follow up. • The SAE (death) doesn't seem to be related to the study **ADR sub Committee Decision:** • Ask for explanation **Death** **Subject ID no. 0653022**
b	**Subject Initial:** R-K **Gender:** M **Age:** 70 years **Patient enrolled date:** 28th May, 2018 **Patient follow up under study:** Enrolment (Baseline) Month 6, Month 12, Month 18, Month 24, Long term consent, Tel. Month 30, Te;. Month 42, Tel Month 54, Tel Month 66, Tel Month 78. **Weight:** 59.0 KG **Height:** 157.0 cm **Subject History:** Site person made a follow-up call to subject on 7th April, 2021 around 11:45 AM, Subject's LAR informed that the subject passed away on 31st March, 2021 at 8:00 PM. LAR said that patient was not feeling well for last 10 days. He had a complaint of weakness, and breathlessness and suddenly expired at home. Local medical person confirmed his death. Autopsy was not done and no documents are available. Only Death Certificate received.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Primary reviewer: 1. The subject was enrolled on 28th May, 2018. According to this his 30th month follow-up would have fallen in November, 2021. The SAE was, however detected on 8th April, 2022. Explanation may be sought for the skipped follow-up. **ADR sub Committee Decision:** • Ask for explanation ***Ref. code: 86th ECM IIC/P3***
II	ADR of research protocol entitled ***"International study of comparative health effectiveness with Medical and invasive approaches"*** submitted by Prof. Sharad Chandra, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 45/Cardio/Res/22 dated 26th April, 2022. **Death** **Subject ID no. 091019-502** **Subject Initial:** S-S **Gender:** F **Age:** 52 years-01-01-1970 **Date of enrollment:** 28th May, 2018 **Patient follow up under study:** Randomization visit, Month 1.5, Month 3 Month 6,Month 12, Month 18, every month telephonic Follow up till 5 Years. **Weight:** 76.0 KG **Height:** 160.0 cm **Subject History:** Site person has made a scheduled monthly follow-up call to the subject on 15 April, 2022 at 11:00 hrs. Subject's LAR informed that subject passed away on 18th January, 2022 at around 16:00 hrs. LAR said that subject had severe bleeding for which she was taken to the nearby hospital, her creatinine was highly elevated, and her condition was not good so they took the patient against medical advice. From there and on the way from hospital to Cardiology KGMU emergency she expired. No autopsy was done and family members destroyed all papers after cremation. ***Recommendation of Primary reviewer:*** • SAE (Death) is most likely due to disease outcome (FUC Non ST Elevation MI with CKD) and excessive vaginal bleeding and not due to intervention (99 mm Tc-Sestamibi) as patient intervened almost 3 year 11 month back and completed 47

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Month telephonic follow-up visit without any complaint. • Causal relationship cannot be established as the subject after having severe vaginal bleeding was taken back against medical advice (LAMA) from nearby hospital and on the way to Cardiology emergency, KGMU she expired. No autopsy was done and family members destroyed all papers after cremation, so no records were found. • PI to submit Death certificate as it is missing **ADR sub Committee Comment:** • Clarify if the patient is on anti-platelet drugs and could it be related to excusive vaginal bleeding. What could be the possible etiology of excusive vaginal bleeding? ***Ref. code: 86th ECM IIC/P3***

II-A	**New Proposal**
1.	Research proposal entitled ***"Analysis of the existing policies & programs of the central and various state governments of India with respect to the 'mental health needs of older adults"*** submitted by Dr. Akanksha Sonal, Assistant Professor, Department of Geriatric Mental Health, King George's Medical University, U.P., Lucknow vide letter no. 1512/DGMH/2022 dated 8th March, 2022. ***Recommendation of Primary reviewer:*** • This is the evaluation of certain programs • The exclusive list of the programs should be provided. • How the data for last 10 years will be collected? • The questionnaire for evaluating the programs is required. • How the "qualitative analysis" will be performed? • What software shall be used for performing "qualitative analysis?" **EC Comment:** As above **EC Decision:** Revise and Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM IIA/P1***
2.	Research proposal entitled ***"To study the volume of biomedical waste generated in a healthcare facility"*** sponsored by Centre for Chronic Disease Control submitted by Dr. Nitin Dutt Bhardwaj, Associate Professor, Department of Hospital Administration, King George's Medical University, U.P., Lucknow vide letter no. HA/87/2022 dated 10th March, 2022.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Primary reviewer: • To make the study useful, couple of private as well as government healthcare facilities should be included in the facility. If possible. • The questionnaire is required to measure the various categories of waste. **EC Comment:** As above **EC Decision:** Approval subject to modification with corrections in tabular format in word file. ***Ref. code: 116th ECM IIA/P2l***
3.	Research proposal entitled ***"Study of incidence and prevalence of electric burn injuries in North India at tertiary burn care Centre"*** submitted by Dr. Ravi Kumar, Assistant Professor, Department of Plastic Surgery, King George's Medical University, U.P., Lucknow vide letter no. 237/2022 dated 10th March, 2022. ***Recommendation of Primary reviewer:*** • The numerator and denominator are different for "incidence" and "prevalence". • These should be exclusively specified, which shall require target population, sampling frame etc. • The term "North India" will require the target population of whole north India. Do they really mean to do it? • The questionnaire is required. • The sample size is given to be 100. How this figure is arrived at? • Basically, this is a descriptive statistics to find out rates. How this can be used for doing survival analysis is not clear. **EC Comment:** As above **EC Decision:** Revise and Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM IIA/P3***
4.	Research proposal entitled ***"Searching safer options for delivery of pedicle of free flaps into the neck in minimal access neck incisions"*** submitted by Dr. Ravi Kumar, Assistant Professor, Department of Plastic Surgery, King George's Medical University, U.P., Lucknow vide letter no. 236/2022 dated 10th March, 2022. ***Recommendation of Primary reviewer:*** • By the title, the proposal looks to be a "comparative study". • This is not an observational descriptive study, as mentioned in the proposal. • The aim and the corresponding research question should be formulated properly after identifying the study parameters and variables. • It is wrong contention that "sample size calculation not required for observational

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	study" as mentioned in the proposal. • Anyway, sample size calculation should be done after properly defining the research hypothesis. • The statistical analysis section shall be accordingly written. **EC Comment:** As above **EC Decision:** Revise and Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM IIA/P4***
5.	Research proposal entitled "***Comparison of stress and anxiety levels among pregnant women on the basis of gender of the first living child***" submitted by Prof. Anjoo Agarwal, Department of Obstetrics & Gynaecology, King George's Medical University, U.P., Lucknow vide letter no. OG/605/2022 dated 9th March, 2022. ***Recommendation of Primary reviewer:*** • Aims and objectives are not given. • The corresponding research hypothesis is required, • This is a prospective cohort study for comparing two group. The two groups should be clearly identified. • The sample size calculation is not given. • The questionnaire is required. • The statistical analysis section is required. **EC Comment:** As above **EC Decision:** Revise and Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM IIA/P5***
6.	Research proposal entitled "***Development of blueprint for setting Anatomy question paper in Colleges affiliated to King George's Medical University***" submitted by Dr. Garima Sehgal, Additional Professor, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 668/ANAT/2022 dated 11th March, 2022. **EC Decision:** Approved ***Ref. code: 116th ECM IIA/P6***
7.	Research proposal entitled "***Mechanisms of autophagy-mediated cell survival in breast cancers and its implication in therapeutics and diagnostics***" submitted by Prof. M.L.B. Bhatt, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 219/RT/2022 dated 14th March, 2022. **EC Comment:** • No patient information brochure. • Hindi translation of title of proposal is incorrect.

Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Primary reviewer: • Sample size calculation may be added • Patient information sheet to be attached • The methodology for statistical analysis is missing and needs to be added • The outcome measures need to be mentioned- will there be any clinical parameters for assessment? • Kindly provide inputs for points: 1. No. 5 related to subject selection in annexure 1, 2. No. 8 related to consent in annexure 1. 3. No. 9,10 and 11 related in annexure 1. • The study procedure can be elaborated in ICF in a language for patient to be a to understand better (in both English and Hindi versions) **EC Comment:** As above **EC Decision:** Approval subject to modification with tabular format in word file. ***Ref. code: 116th ECM II B-FS/P1***
2.	Research proposal entitled ***"Exploration of co-regulatory network of microRNA200 and microRNA31 in tumor progression in OSCC and elucidating its effect on efficacy of chemotherapeutic agents"*** sponsored by ICMR, New Delhi submitted by Dr. Purnima Radesh under the guidance Prof. Shalini Gupta, Department of Oral Pathology & Microbiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no.676/OP/22 dated 11th April, 2022. ***Recommendation of Primary reviewer:*** • Sponsor information missing in annexure 1 where as it is written as ICMR sponsored. No budget is indicated. • Regarding point number 4 in annexure 1 : 1. Outcome measures and statistical analysis needs to be briefed. 2. References need to be added while quoting the literature on miRNA in cancer. 3. What is the full form of TNBC ? 4. How will this study initiate the target genes and pathways associated with miR-31 and examine the mechanism underlying the function of miR-31? 5. Also elaborate the use of bio informatics tools in this study • No inclusion or exclusion criteria mentioned despite quoted in annexure 1. If type of subjects are only Patients (annexure 1) then what about controls? Are there any

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	controls as well? • The patient information sheet not attached • Kindly fill up the gaps in annexure 1 • If there is a plan for reporting adverse effect in this basic science study as mentioned in annexure 1, kindly brief about those anticipated adverse effects. These need mention in ICF as well. • Furthermore, the ICF needs revision in such a way that the 'purpose of the study' and 'study procedures' are understandable to the patient who is giving consent. • The review of literature should be more relevant to the concerned study and re-written according to the objectives proposed. • Kindly elaborate in detail about the methodology for the three objectives separately in different paragraphs. • What chemotherapeutic agents are targeted in this study? • Which different genes will be explored? • Regarding expected outcomes as mentioned at the end of the submitted proposal, kindly brief as to what clinical or pathological data will be collected. There is no case sheet attached for the clinical or pathological data that is intended to be registered. Kindly elaborate. • What will be the criteria for efficacy of chemotherapeutic agents? Will it be clinical or molecular or both? kindly elaborate. • What will be the source of normal oral squamous samples? Will it be from matched Control subjects? The ICF from controls need to be obtained and accordingly ICF for controls should be formatted as well. **EC Comment:** As above **EC Decision:** Re-write & Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM II B-FS/P2***
3.	Research proposal entitled ***"Integrated transcriptomics and metabolomics analysis of metabolomics disturbances in triple negative breast cancer cells"*** sponsored by ICMR, New Delhi submitted by Mr. Ankit Pateriya under the guidance Dr. Ashutosh Shrivastava, Associate Professor, Department of Canter For Advance Research, King George's Medical University, U.P., Lucknow vide letter no. 417/CFAR/22 dated 19th April, 2022. ***Recommendation of Primary reviewer:*** • The clinical assessment in material in method section should include collection of survival data and mention it • Regarding metabolic profiling of TNBC cell kindly include the list of metabolites that is being intended to study or the anticipated metabolic pathways involved (that will be tested for) • Depending upon customised metabolic profiling the corresponding names of genes

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	need to be mentioned as well • What is the rational of selecting sample size of 50 • The "study procedure" section in Hindi version of ICF is inadequate and does not match with corresponding English version. Also the versions need to be exact replica translation of each other. • In ICF it is mentioned that compensation will be as per funding agency norms. What are those norms and what amount is permissible? kindly elaborate • Kindly include patient information sheet in Hindi language as well. • Kindly complete many left entries of annexure 1. • While this is mentioned as government-funded ICMR project, another entry states that National industry is also involved in this project but no mention of this industry is mentioned in the text • Will just 20,000/- INR (twenty thousand rupees) be sufficient for this project? **EC Comment:** As above **EC Decision:** Re-write & Re-submit with tabular format in word file. ***Ref. code: 116th ECM II B-FS/P3***
4.	Research proposal entitled ***"Estimation of various inflammatory markers levels in poly cystic ovarian syndrome (PCOS) patients and effect of metformin and furostanolic saponins on granulose cells in PCOS"*** sponsored by ICMR, New Delhi submitted by Mrs. Aparna Shukla, under the guidance Dr. Satyendra K Singh, Associate Professor, Department of Cantre for Advance Research, King George's Medical University, U.P., Lucknow vide letter no. 470/CFAR/22 dated 16th April, 2022. ***Recommendation of Primary reviewer:*** • The sample size calculation may be added • Briefly describe the quantifications of a specific molecular marker expression as one of the outcome variables in blood samples of PCOS patient • Who will retrieve follicular fluid and granulosa cell from 20 patients with PCOS and 10 normal folliculogenesis subjects of 20 to 35 age. This is not mentioned in the role of investigator. • Oocyte retrieval in OBGYN is usually done in in vitro fertilisation (IVF) procedures under general anaesthesia and transvaginal sonographic guidance- this may be possible only if 20 females with PCOS undergo oocyte retrieval for IVF in the time period of the study. Kindly include a paragraph regarding justification and feasibility of such issues. • It has to be explained that why would a female with normal folliculogenesis undergo oocyte retrieval and hyper stimulation of ovary. • For IVF procedures women are given large doses of gonadotropins for hyper stimulation of ovaries. How will they get follicular fluid and granulosa cells from

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	women with normal folliculogenesis? • The statistical analysis should be described quoting the various outcome parameters as well. • Many entries in annexure 1 need to be done. • Justify inclusion of normal women. **EC Comment:** As above **EC Decision:** Re-write & Re-submit with corrections in tabular format in word file. ***Ref. code: 116th ECM II B-FS/P4***
II-C	**Review of New Drug Trial**
1.	Research protocol no. EX6018-4758 Study Phase:3a entitled **"ZEUS - *Effects of ziltivekimab versus placebo on cardiovascular outcomes in participants with established atherosclerotic cardiovascular disease, chronic kidney disease and systemic inflammation*"** sponsored by Novo Nordisk India Private Ltd. submitted by Prof. Rishi Sethi, Department of Cardiology King George's Medical University, U.P., Lucknow, vide letter no. 2156/Cardio/Res/2022 dated 29th March, 2022. ***Recommendation of Primary reviewer:*** • Multiple deficiencies in IEC form • Sec 3 • Approval/marketing is incorrect • What is the change in route? Where is the attached certificate from DCGI? • Is this IND? • No of subjects? • Why use direct identifiers? • What samples will be sent abroad? • Where is the permission attached? • Why alternative treatment option not given? • Why consent form is not provided in English? • Risk benefits- fields filled wrongly • Compensation- fields wrongly filled • Conflict of interest? • Separate consent form for study participation and biomarker collection has to be provided, as mentioned in protocol. **EC Comment:** • We have no patient search agency. **EC Decision:** Approval subject to modification ***Ref. code: 116th ECMIIC/P1***

(Shally Awasthi)

I-A	**Action taken**
1-	Clarification of research proposal entitled ***"To estimate the prevalence of celiac disease in refractory iron deficiency anemia among children: prospective observational study"*** submitted by Dr. Samrat Chirag Singh, JRI, Department of Paediatrics, King George's Medical University, U.P., Lucknow vide letter no. 1109/Ped/22 dated 13th April, 2022. **Previous PGTSC Comment:** • How will be Iron deficiency be assessed. • Where and how will Serum Zinc level be assessed. ***The above comment again forwarded to PI response given by PI was reviewed by PR with following recommendation:*** ***Recommendation of PR:*** The clarification provided on Iron deficiency assessment is not clear as there are many factors other than serum iron levels which may affect Hb. If proper clarification is provided then it may be approved. Moreover, it will be better if Serum Zn levels are

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	estimated by Atomic absorption spectroscopy (AAS) or by ICP-MS. ***The above comment forwarded to PI-Reply pending:-*** **PGTSC Decision:** Defer in the next Meeting ***Ref. code: III PGTSC-IIA/P20***
2-	Clarification of research proposal entitled ***"Utility of lung ultrasonography in the evaluation of ≤34 weeks preterm neonates admitted in a neonatal intensive care unit with clinical suspicion of respiratory distress syndrome within 12 hours of birth"*** submitted by Dr. Shivendra Rai, JRI, Department of Paediatrics, King George's Medical University, U.P., Lucknow vide letter no.1180/Ped/22 dated 21st April, 2022. **Previous PGTSC Comment:** • 'No' has been ticked in response to 'Reasonable risk' question in form. • Involvement of Vulnerable Participants-Not mentioned • Voluntary, Non-coercive Recruitment of Participants-Not mentioned • Voluntary, Non-coercive Recruitment of Participants-Not mentioned • Direct identifiers and completely anonymized are both ticked ***The above comment again forwarded to PI response given by PI was reviewed by PR with following recommendation:*** ***Recommendation of PR:*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: IV PGTSC-IIA/P39***
3-	Clarification of research proposal entitled ***"Conservative versus tube thoracostomy in patients with selected blunt injury chest-A prospective observational study"*** submitted by Dr. Shreedhar Shandilya, JRI, Department of General Surgery, King George's Medical University, U.P., Lucknow vide letter no.761 dated 14th March, 2022.

Previous PGTSC Comment:	PI response
Kindly provide complete methodology.	Attached separately
Kindly explain the study procedure to the patient in simple language instead of writing study design. Kindly follow the SOP provided by IEC, available on Website. Use simple day to day Hindi language.	Attached separately

The above comment forwarded to PI response given by PI was reviewed by PR.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Second opinion of PR / **PI response** Still allocation of patients for different treatment modalities is not clear. In ICF procedure part of the above mentioned proposal part is not clear. Patients has the right tobe properly informed about different steps including treatment modality, in clear and simple language / Attached separately ***The above comment again forwarded to PI response given by PI was reviewedby PR with following recommendation:*** ***Recommendation of PR:*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: V PGTSC-IIA/P16***
4-	Clarification of research proposal entitled ***"Transfusion support in COVID-19 suspects"*** submitted by Dr. Anurag Singh, JRI, Department of Transfusion Medicine, King George's Medical University, U.P., Lucknow vide letter no.600(A)/2021 dated 18th November, 2021. **Previous PGTSC Comment:** • Department Review Committee has only 3 members. • There are 3 Co-PIs from the same department which seems superfluous. Please decrease the number of Co-supervisors or define their roles. • IEC form doesn't mention – a. Type of study (Clinical/Epidemiological) b. Advertised or not? c. Contact person details in Consent Form d. Study involves blood sample collection which is not mentioned in the IEC form. • The topic doesn't reflect the Objectives, please reconsider. • IEC needs to be modified and resubmitted. ***The above comment forwarded to PI response given by PI was reviewed by PR.*** ***Recommendation of PR:*** • Approved **PGTSC Decision:** Approval ratified ***Ref. code: V PGTSC-IIA/P28***
5-	Clarification of research proposal entitled ***"A fluoroscopic comparison between video laryngoscope and macintosh laryngoscope for assessment of cervical spine mobility during tracheal intubation in patients with cervical spine injury"*** submitted by Dr. Muthunagarathinam. M, JR-I, Department of Anaesthesiology, King George's Medical

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

University, U.P., Lucknow vide letter no. Anaes/626/21 dated 19th April, 2022.

Previous PGTSC Comment:

- 1 Supervisor and 3 co-supervisors from the same department. Please decrease the number or mention their unique roles.
- Sponsor information incorrect
- Vulnerable/Special groups not ticked in IEC form.
- Privacy/Confidentiality section filled incorrectly.
- Use of biological material not filled.
- Details of Consent not filled in IEC form.
- Risk is mentioned as not reasonable.
- Benefits of Video laryngoscopy are already known. Why this study?
- Conventional laryngoscopy in patients with cervical spine injury increases the risk of further trauma. Having Video laryngoscopy which is less risky and still doing laryngoscopy with a technique which is risky, will be UNETHICAL. Suggest this study be conducted in patients who may not be at risk of spinal trauma.
- Informed consent doesn't mention details of complications due to spine movement and due to fluoroscopy usage.

The above comment forwarded to PI response given by PI was reviewed by PR.

Second recommendation of PR:

Second opinion of PR	PI response
Research project maybe accepted of the study is being carried out in patient without cervical spine injury.	As recommended by IEC, the study will be now carried out in patients without cervical spone injury. (Corrected proforma attached separately)

The above comment forwarded to PI response given by PI was reviewed by PR.

Third recommendation of PR:

- Approved with modified title

PGTSC Decision: Approval ratified

Ref. code: V PGTSC-IIA/P31

6- Clarification of research proposal entitled ***"Comparison of infraclavicular brachial plexus block and combination of infraclavicular brachial plexus block with suprascapular nerve block for shoulder surgeries: A randomized control trial"*** submitted by Dr. Parul Saxena, JRI, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. Anaes/594/22 dated 8th April, 2022.

Previous PGTSC Comment:	PI response
The fundamentals of performing RCT are not completely Specified:	a. Yes, in process

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

(a) Clinical Trial Registry (b) Is blinding needed? (c) Research hypothesis is not properly defined: whether it is (i) inferior, (ii) superior or (iii) equivalence trial?	b. Yes, Single blinding needed c. My research hypothesis proposes that, there is o difference between "Infraclavicular brachial plexus block and combination of infraclavicular brachial plexus block with supracaplular nerve block for shoulder surgeries". Hence it is an equivalence trial.
The sample size will depend on the research hypothesis. Statistical Analysis section should be more specific	Sample size has been calculated as 31 in each group. Attached separately

The above comment forwarded to PI response given by PI was reviewed by PR.
Third recommendation of PR:

- Approved

PGTSC Decision: Approval ratified

Ref. code: VI PGTSC-IIA/P5

7- Clarification of research proposal entitled ***"Radiological evaluation of spinal dysraphism with ultrasonography and its comparison with magnetic resonance imaging in children UPTO 1 year of age"*** submitted by Dr. Dhiraj Kumar Gupta, JRI, Department of Radiodiagnosis, King George's Medical University, U.P., Lucknow vide letter no.398/RD/22 6th May, 2022.

Previous PGTSC Comment:	**PI response**
In aims and objectives it is mentioned that biopsy will be performed but it is not mentioned in the consent form.	Corrected Aims and Objectives: 1. To see the distribution of different kinds of spinal dysraphism in and around Lucknow in children upto 1 year of age 2. To assess the diagnostic value of spinal ultrasound in evaluation of SD when compared to MRI which is gold standard of imaging in this condition 3. To compare the radiolgocal diagnosis with clinical diagnosis
Although the study will be performed on	Dr. Shalini Tripathi, Associate Professor

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

children less than one year of age, no cosupervisor has been taken from the Pediatric Department, Otherwise there are a lot many co-supervisors.	Department of Paediatric, KGMU, Lucknow chosen has Co-supervisor.

The above comment forwarded to PI response given by PI was reviewed by PR.

Second opinion of PR	**PI response**
The first two points have not been addressed (Rectification of the consent form)	

The above comment forwarded to PI response given by PI was reviewed by PR.
Recommendation of PR: Approved
PGTSC Decision: As above

Ref. code: VI PGTSC-IIA/P19

8- Clarification of research proposal entitled ***"Diagnostic yield of trans-vaginal ultrasound in post menopausal females and correlation with CA 125 levels"*** submitted by Dr. Vasav Tyagi, JRI, Department of Radiodiagnosis, King George's Medical University, U.P., Lucknow vide letter no.399/RD/22 dated 6th May, 2022.

Previous PGTSC Comment:	**PI response**
How Ca 125 levels will be measured? Sample collection/Methodology/ References are not given.	Attached separately
Who will do the test?	Lab Technician posted at Gynaecology OPD in QMH Hospital, KGMU, Lucknow.

The above comment forwarded to PI response given by PI was reviewed by PR.
Recommendation of PR:-

- Gone through the clarification. Still neither the reference of method which will be used for Ca 125 measurement is given nor is a satisfactory response for under whose supervision it will be carried out is mentioned. The candidate has written that blood will be collected by a Lab. technician. Name of the Faculty under whose supervision it will be carried out shall be mentioned. May be approved at your end after the above two clarifications are provided.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

The above comment forwarded to PI response given by PI was reviewed by PR.
Recommendation of PR:-

- However, in the project of Dr. Vasav Tyagi, they still mention that laboratory investigation will be carried out under the supervision of a Gynaecologist which I cannot understand why they are insisting on this? Supervision of a person from a diagnostic department (Pathology/Biochemistry) must be there.

PGTSC Comment: As above
PGTSC Decision: Approval subject to modification with tabular format in word file.

Ref. code: VI PGTSC-IIA/P20

9- Clarification of research proposal entitled ***"Prospective observational study on hyponatremia in acute encephalitic syndrome in children: its occurrence and effect on the outcome"*** submitted by Dr. Nikita Diwan, JRI, Department of Paediatrics, King George's Medical University, U.P., Lucknow vide letter no. 989/Ped/22 dated 1st April, 2022.

Previous PGTSC Comment:	**PI response**
Number of subjects is 200 or 215?	Number of subjects 200 enrolled in the study.
Vulnerable subjects have not been ticked even though it is a study on children	Attached separately
Section on Consent is incomplete.	Attached separately
Answer to 'Risk is reasonable' is NO. 5.	Attached separately
Assent form for children is not attached.	Attached separately

II-A	**New Thesis-Resident**
1.	Research proposal entitled ***"The prevalence of internet gaming and its predictors in adolescents in a district of UP"*** submitted by Dr. Gunjan Bhargava, JRII, Department of Community Medicine & Public Health, King George's Medical University, U.P., Lucknow vide letter no. 1253/CM/22 dated 2nd March, 2022. ***Recommendation of Primary reviewer:*** • This is supposed to be a cross-sectional study to find the prevalence. • The objective "prevalence of internet gaming" is not clear. The parameter should be properly identified and then objective should be properly stated. • This is a descriptive study. The problem of distinguishing whether exposure preceded outcome or vice versa, is unique to the cross-sectional studies and constitutes major limitations in analytic research. In other words, using it for finding "predictors" should be avoided. • The proposed "district" is not mentioned. • The proposal should be more specific and pinpointed. The objectives should be for a descriptive study and not for an analytic study. In the present format, these are mixed. **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit with tabular format in word file. ***Ref. code: X-PGTSC-IIA/P1***
2.	Research proposal entitled ***"Evaluation of non-endoscopic and endoscopic assisted platysma flap- A randomized control trial"*** submitted by Dr. Sandeep Kumar, JRII,

OFFICE OF THE ETHICS COMMITTEE

Administrative Block

Minutes of 117th IEC Meeting held on 30th July, 2022

(Registration No.: ECR/262/Inst/UP/2013/RR-19)

Minutes of 117th "Institutional Ethics Committee" Meeting ***virtually*** held on 30th July, 2022 from 10:30 AM***The following members were present in the Meeting:***

1. Prof. Alok Dhawan -Chairman
2. Prof. Shubha R Phadke -Member
3. Dr. Akash Agarwal -Member
4. Mrs. Vasundhara Kumari -Member
5. Mr. Ujjwal Krishna -Member
6. Dr. K.K. Yadav -Member
7. Prof. Rajendra Nath -Member
8. Prof. Anupam Mishra -Member
9. Prof. Anita Rani Singh -Member
10. Dr. D.N. Upadhyaya -Member
11. Mrs. Akansha Dubey -Member
12. Prof. Shally Awasthi -Member-Secretary, IEC

The following Member could not attend the Meeting:

1. Prof. A.A. Mahdi –He has not given his comment
2. Prof. G.G. Agarwal-He has given his written comment

IA	Action Taken
1	Clarification of research proposal entitled "***Missed injury associated with maxillofacial trauma: An observational study***" submitted by Dr. Arunesh Kumar Tiwari, Associate Professor, Department of Oral and Maxillofacial Surgery, King George's Medical University, U.P., Lucknow vide letter no.585/OMF/2021 dated 15th July, 2022

Previous EC Comment:	PI response

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	The protocol appears to be a part of manuscript prepared for publication. Kindly resend the proposal in proper format.	Sending a fresh protocol along with.
	Apply as fresh proposal for waiver	No waiver approval required for now.

The above Comment forwarded to PI was reviewed by PR:-

Recommendation of PR:

- Role of Co-PI seems incorrect.
- Patient Information sheet has not been provided. In the ICF, the procedure is not explained properly.

EC Comment:

- As above

EC Decision: Re-submit

Ref. code: 111th ECM IIA/P14

2 Clarification of research proposal entitled "***Matrix metalloproteinases in angiogenesis and tumor invasion: clinicopathological impact in urothelial bladder carcinoma patients***" submitted by Prof. Apul Goel, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 385/URO/2022 dated 15th July, 2022.

Previous EC Comment:

- Patient information sheet (Part-I) has no information about sample collection. It has to be modified in both English & Hindi.

Previous EC Decision: Approval subject to modification

The above Comment forwarded to Primary reviewer for review:-

Recommendation of PR:

Approved

EC Decision: As above

5	Clarification of research proposal entitled ***"Knowledge, attitude and practice of Paediatric trauma management among the health care workers providing trauma care in government run major Hospitals of Lucknow: A questionnaire based study"*** submitted by Dr. Vikas Verma, Associate Professor, Department of Paediatric Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no.1782/PaedOrtho/2022 dated 31st May, 2022.

Sl.No.	Previous EC Comment:	PI response
1-	The title should be "Development and validation of a questionnaire to assess Knowledge, attitude modify accordingly.	Title changed as advised to "Development and validation of a questionnaire to assess knowledge, attitude and practice about paediatric trauma management among health care workers providing trauma care in major government run hospitals of Lucknow "
2-	The methodology to develop, assess reliability and validity of the questionnaire should be given in detail. For example, what kind of "validity" is required for the present situation?	The methods section has been rewritten as Questionnaire would be developed using the following steps:- Step 1: To summarize the structure and extent of questionnaire – Literature will be reviewed for defining the questions related to management of paediatric trauma. Meeting of experts in the field of paediatric trauma will be conducted. Telephonic interviews will be conducted with experts in the field. Information gathered will be used to design a questionnaire assessing the demography, educational status, current designation, knowledge, attitude and practice about paediatric trauma among doctors managing trauma.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

				Step 2: Development and precision of questionnaire items - To ensure precision and agreement the questionnaire will be evaluated by an expert panel (n=5) to identify the dimensionality of the construct, determine the questionnaire format (self or researcher administered), determine the item format (open ended or closed ended), develop the items, determine the length of the questionnaire, and review and revise the initial item pool. Any new questions suggested by the expert panel will be added to the questionnaire. Content validation of the questionnaire would be done at this stage. For this a meeting of internal and external experts shall be called. Each question as well as the overall questionnaire will be scored for content validity and clarity; with response options given as l="not", 2="Somewhat", 3="rather" Or 4:"highly" relevant or clear. Responses will be summed and averaged to determine a mean score for the relevancy and clarity of each question. Questions with low mean score will be removed and revisions will be made. Step 3: Cognitive interviews: Cognitive interviews would be conducted with health care workers (n=10) trauma in the trauma centre of KGMU. Written informed consent would be obtained from the enrolled health care workers. During the interviews, which will range in duration from 15-30 min each, participants will be instructed to complete the questionnaire by 'thinking out loud" as they read and answer each question. Commentary will be encouraged around interpretation of wording, arrival at answers, and available response options. Comments will be	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

				recorded and later analyzed to identify common themes. Time taken to fill one form will be recorded. Based on this feedback, a **2.0 version** of the questionnaire will be finalized. This will complete the development stage of the study. Step 4: Pilot testing: For pilot testing a convenient sample size of 30 will be taken. Participants would be recruited from the health care workers managing trauma in the trauma centre of KGMU. Written informed consent would be obtained from the participants. The same set of participants would fill the questionnaire thrice with a gap of 24 hours between each time. Questions would be assessed for floor effect and ceiling effect. Those with high floor effect and ceiling effect would be removed from the questionnaire. The questionnaire items would be revised upon reviewing the results of the preliminary pilot testing. No incentive will be provided to the participants. **Step 5: Validation:** The questionnaire would be validated by calculating estimates of reliability and validity. Reliability: Would be assessed by determining the internal consistency, test retest reliability and inter-rater reliability. Internal consistency of the questionnaire would be calculated using Cronbach's α for the questionnaire as well as each of the items in the questionnaire. An α value of ≥ 0.80 will be taken as internally consistent. Test-retest reliability of the questionnaire would be calculated using intra-class correlation coefficient. Inter-rater reliability would be estimated using kappa for agreement (would be done if whole or part	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

				of the questionnaire is researcher administered). Validity: Content validity would be estimated as detailed in step 2. Construct validity cannot be estimated as pre-existing instruments to measure knowledge, attitude and practice about paediatric trauma in health care workers is not available. Once a precise questionnaire has been developed, it will be used in the second stage of the study. The questionnaire will be used to assess the knowledge, attitude and practice about paediatric trauma in health care workers involved in trauma care at government run major hospitals of Lucknow namely Ram Manohar Lohia institute, King George Medical University, Lucknow, Sanjay Gandhi Post graduate institute, Lucknow Balrampur Hospital and Civil Hospital. All types of paediatric trauma cases are admitted in the department of trauma surgery at the trauma centre of KGMU. Once primarily managed and stabilized they are transferred to other departments for definitive management. Paediatric orthopaedic injury patients are transferred to the department of Paediatric Orthopaedics. Paediatric head injury cases are transferred to the department of neurosurgery. Paediatric thoracic injures and abdominal injuries are managed in the department of trauma surgery itself. Questionnaire would be designed by involving internal as well as external experts from the department of trauma surgery, neurosurgery and paediatric orthopaedics.

15 Clarification of research proposal entitled "***Comparison of stress and anxiety levels among pregnant women on the basis of gender of the first living child***" submitted by Prof. Anjoo Agarwal, Department of Obstetrics & Gynaecology, King George's Medical University, U.P., Lucknow vide letter no. OG/1307/22 dated 11th June, 2022.

Previous EC Comment	PI response
Aims and objectives are not given.	Aims and objectives mentioned (in executive summary) **Primary objective:** To find out levels of stress and anxiety among females during their second pregnancy and compare the levels between women whose first child was male versus whose first child was female. **Secondary objectives:** 1. To ascertain the psychosocial aspect on the gender preference of children present in Indian population. 2. To determine whether the gender preference of children is more prevalent among certain sections of the society on the basis of place of residence, socioeconomic status, religion, caste, literacy, etc. 3. To correlate stress and anxiety of women with social support from family, friends and significant other. 4. To comment on the subjective well-being of the women of the two groups.
The corresponding research hypothesis is required,	Research hypothesis mentioned (in executive summary) 1. Women whose first child was female are likely to have higher levels of stress and anxiety in regards to the general idea of preference of male child in Indian population. 2. This difference is more likely to be present in women coming from rural areas, low socioeconomic status or low literacy.
This is a prospective cohort study for comparing two group. The two groups should be clearly identified.	Details of two groups added (in executive summary) Group 1: women in their second pregnancy who's first living child is male.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Group 2: women in their second pregnancy who's first living child is female.
	The sample size calculation is not given.	Sample size calculation mentioned (in executive summary and annexure 1) Sample size was calculated to be 104 (51 for each group) (Noncentrality parameter δ = 2.5248762, critical t = 1.6602343, Df = 100) with the following parameters Tail(s) = One Effect size d = 0.5 α err prob = 0.05 Power (1-β err prob) = 0.8 Allocation ratio N2/N1 = 1
	The questionnaire is required.	Questionnaire attached
	The statistical analysis section is required.	Statistical analysis mentioned (in executive summary) The data obtained from the filled forms will be fed into MS Excel 2016. Statistical analysis will be done using Statistical Package for the Social Sciences (SPSS) version 22. Descriptive analysis will be performed to determine the percentage of individuals exhibiting similar levels of depression-anxiety-stress, subjective well-being & perceived social support. Unpaired t-test will be used to compare the mean scores of the three scales in the two groups to determine if there is a statistically significant difference between them. Correlational analysis will also be done to determine if there exists an association among variables.

17	Clarification of research proposal entitled "***To determine the role of infection control nurse (ICN) in prevention and control of Hospital acquired infections***" submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 133/CCU/22 dated 21st June, 2022.

Previous EC Comment	PI response
Define role of ICF	The role of An Infection Control Nurse role is to identify, create, and employ best practices for sanitation and infection management. Whether it's a contained infection or a global pandemic, ICN should eliminate infectious threats that may be present.
Research proposal very sketchy give details clearly.	**Objective:** 1. **Primary Objective** – To study the role of Infection Control Nurse (ICN) in prevention and Control of Hospital Acquired infection 2. **Secondary Objective** – To study the incidence of Ventilator Associated Pneumonia (VAP), Central line-associated bloodstream infections (CLABSI), Catheter-Associated Urinary Tract Infections (*CAUTI*) in Critical Care Unit (CCU). **Method:** All patient admitted in CCU will be enrolled in study. At admission will be following parameters will be noted- 1. APACHE 2. Indwelling in situ

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		3. Culture Sensitivity reports 4. Days Mechanical Ventilation 5. SOFA score (daily) 6. All Routine Investigation ICN will DO the Check list review of the standard ICU protocol and assure there compliance. Compliance to various ICU Bundles will be assured. **Design:** To Study The Effectiveness Of ICN (Infection Control Nurse) in Infection Preventing Control in Critical Care Unit. Patient admitted in ICU during 1 year duration will include in the study. The data will be compared with the previous year data when ICN were not appointed. 1 year Prospective cohort study of Infection Control Nurse (ICN) **Intervention:** No Intervention **Participants:** Patients admitted in ICU over a period of one year. **Setting:** Infection Control Nurse (ICN), King George's Medical University, Lucknow India **Result:** we will collected and analyse. Before analyzing, the data will be anonymised. We will compare the incidence of hospital Acquired Infection (HAI) in 1 year period with previous year data.
	Patient information sheet/Consent not clear.	The data will be anonymised. Request is for consent waiver.
	Is the routine work or research?	These activities in critically ill patients must be performed by the nursing officer looking after the patient. ICN will ensure that these activities are performed according the protocol in every patient. He/she will ensure the implementation of ICU Care bundles and will collect the data of these patients. One dedicated person assign for this task may improve the patient's outcome. The primary outcome measure is whether appointment of ICN in ICU can result in decrease in infection rate and

(Shally Awasthi)

Chairman, IEC

		enrolled patients will be aware of the treatment(s).
	Since it is a randomized trial, get it registered it in CTRI portal.	Yes, we know that but for registering a trial in *Clinical Trials Registry- India (CTRI)* portal ethical clearance certificate is required to be uploaded on the portal.
	Include an Ayurvedic doctor in the project.	**Dr. Naresh Patel,,**BAMS,,Emergency Medical Officer, Nishat Hospital,,Lalbagh,,Lucknow **Tel No.-** 0522-2334035 **Mobile No.-** 9839184703,9450110180
	Method of randomization is not mentioned.	Simple random sampling will be used in the study by Random number table method. **Simple random sampling-** Simple random sampling is a type of probability sampling in which the researcher randomly selects a subset of participants from a population. Each member of the population has an equal chance of being selected. ▪ **Random number table method-** A random number table is a table of digits. The digit given in each position in the table was originally chosen randomly from the digits 1,2,3,4,5,6,7,8,9,0 by a random process in which each digit is equally likely to be chosen.

submitted by Dr. Devarshi Rastogi, Associate Professor, Department of Orthopaedic Surgery, King George's Medical University, U.P., Lucknow vide letter no. 2322/OS/2022 dated 13th June, 2022.

Previous EC Comment:	PI response
Sample size is not mentioned	*The present study is retrospective study (Jan* 2017 to Jan 2021*), all the subjects who meet our inclusion criteria within the mentioned duration will be included in the study, Every year total 30 to 40 patients of chronic TA rupture visited the hospital, so our target is to enrolled at least 54 subjects or above.*
Exclusion criteria, discontinuation and withdrawal criteria not mentioned.	Patients were given written informed consent previously. Before being recruited, all patients will be diagnosed with a full-thickness tear by Ultrasonography (USG) and a physical examination that include heel raise and ankle movement. Patients were unable to complete a single-limb heel-rise because of a neglected or chronic TA rupture with a ruptured gap of more than 6 cm. Patients with a history of local infection near tendon rupture, open Achilles tendon rupture, a concomitant disease with fracture, poor skin condition, Acute Achilles tendon rupture, varicose vein, DVT, ruptured gap of less than 6 cm, blood vessel rupture, or nerve rupture were ruled out. Subjects have right to withdraw from the study.

Previous EC Comment:	PI response
Calculation of sample size is not clear. It is mentioned that in total 173 cases will be recruited and in each group there will be 43 subjects. Why?	The estimated minimum sample size for the study is 170. Thus, in each of the 4 study settings (two general hospital settings and two community setting) around 43 participants will be required. Considering them to be divided equally into intervention arm and control arm we have proposed to recruit 22 participants in each arm.
In the setting of the study section it is mentioned that subjects will be recruited from Bhopal too. Which institution and who will be the Co-PI from there is not mentioned.	The details of the institution and Co-PI from Bhopal site are as follows:- **Name of the Institution:** All India Institute of Medical Sciences, Bhopal, Madhya Pradesh.

(Shally Awasthi)
Member-Secretary, IEC

		and bivariate analysis was used. Possible tests that can be applied in the present study would be:- As the present study is present in Clinical data sets and it is a parametric statistical test, an assumption about the population parameters and the distributions of the data can be made with the following included includes T-***tests, Z tests and ANOVA tests, which assume data is from normal distribution*** **1. T test formula** One-sample t-test is expressed using the observed sample mean, the theoretical population means, sample standard deviation, and sample size. Mathematically, it is represented as, $t = (\bar{x} - \mu) / (s / \sqrt{n})$ **2. Z test** The formula for calculating a z-score is $z = (x-\mu)/\sigma$, where x is the raw score, μ is the population mean, and σ is the population standard deviation. As the formula shows, the z-score is simply the raw score minus the population mean, divided by the population standard deviation. **3. ANOVA Test** A one-way ANOVA uses the following null and alternative hypotheses: H_0 (null hypothesis): $\mu_1 = \mu_2 = \mu_3 = \ldots = \mu_k$ (all the population means are equal) H_1 (alternative hypothesis): at least one population mean is different from the rest.
	4:Outcome measures:	ANOVA, z -test, two-tailed t-test through Graphpad 7.0 and SPSS 22.0.
	5:	**(A)** **Subject selection** i. Number of subjects: 160 ii. Duration of a) Study: 24 months b) Subject participation: iii. Will subjects from both sexes be recruited

34 Clarification of research proposal entitled ***"Integrated transcriptomics and metabolomics analysis of metabolomics disturbances in triple negative breast cancer cells"*** sponsored by ICMR, New Delhi submitted by Mr. Ankit Pateriya under the guidance Dr. Ashutosh Shrivastava, Associate Professor, Department of Canter For Advance Research, King George's Medical University, U.P., Lucknow vide letter no. nil dated 17th June, 2022.

Previous EC Comment:	**PI response**
The clinical assessment in material in method section should include collection of survival data and mention it.	The patients will be followed up for response to the chemotherapy and survival data will be recorded. The same has been mentioned in method section.
Regarding metabolic profiling of TNBC cell kindly include the list of metabolites that is being intended to study or the anticipated metabolic pathways involved (that will be tested for)	**Metabolites** Boric acid Carbonate Citrate lactic acid L-Valine Glycine Phosphoric acid Lactate Isocitrate Succinate Butanedioic acid Uracil Serine L-Threonine

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Tromethamine α-Ketoglutarate L-Aspartic acid L-Glutamic acid D-Fructofuranose D-Glucose Palmitic acid Myo-inositol	
	Depending upon customised metabolic profiling the corresponding names of genes need to be mentioned as well.	In this study we will also focused on the genes of TCA cycle, such as, IDH, SDH, CSY and MDH. Which are known to regulate the metabolite levels related to energy metabolism?	
	What is the rational of selecting sample size of 50?	**Sample Size:** The sample size was calculated based on a previous study that reported the average fold-changes of metabolites (Amino acid, bile acid, carbohydrates, vitamins and cofactors) in breast cancer is 3.3% (Park et al.,2019), 95% level of confidence and Error rate, usually set at 0.05 level is 4. Total 50 patients will be included in this study. We have used following statistical formula to calculate patient's sample size. Same has been mentioned in method section of research proposal on page on. 5. $n=Z^2P(1-P)/d^2$ Where, • n = sample size, • Z = Z statistic for a level of confidence,	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	for the level of confidence of 95%, which is conventional, Z value is 1.96. • P = expected prevalence or proportion (in proportion of one; if 3.3%, P = 0.033), • d = precision (in proportion of one; if 5%, d = 0.05). **n**=1.96x1.96x0.033x0.967/0.05^2 **n=49.04**
The "study procedure" section in Hindi version of ICF is inadequate and does not match with corresponding English version. Also the versions need to be exact replica translation of each other.	The corrected ICF is now incorporated.
In ICF it is mentioned that compensation will be as per funding agency norms. What are those norms and what amount is permissible? Kindly elaborate.	There is no compensation by the funding agency. The entry in the annexure 1 is corrected.
Kindly include patient information sheet in Hindi language as well.	We have now added the patient information sheet in Hindi language as well.
Kindly complete many left entries of annexure 1.	We have filled all the left entries of annexure 1.
While this is mentioned as government-funded ICMR project, another entry states that National industry is also involved in this project but no mention of this industry is mentioned in the text	This study is funded by Indian Council of Medical Research, Central Government of India.
Will just 20,000/- INR (twenty thousand rupees) be sufficient for this project?	The contingency amount of this ICMR funded project is 20,000/-. This study will be conducted in the laboratory of Dr. Ashutosh Shrivastava (mentor) already funded by Ministry of Ayush, Government of India. Sanction letter No.:**S-14015/6/2019-SCHEME** Total Project Cost: INR **59,91,281/-**

35 Clarification of research proposal entitled ***"Estimation of various inflammatory markers levels in poly cystic ovarian syndrome (PCOS) patients and effect of metformin and furostanolic saponins on granulose cells in PCOS"*** sponsored by ICMR, New Delhi submitted by Mrs. Aparna Shukla, under the guidance Dr. Satyendra K Singh, Associate Professor, Department of Centre for Advance Research, King George's Medical University, U.P., Lucknow vide letter no.564/CFAR/22 dated 14th July, 2022.

1	The sample size calculation may be added.	The sample size was calculated based on previous studies that reported the prevalence of PCOS among reproductive women is 4-5%, 95% level of confidence and error state, usually set at .05 level is 4. So, by using following formula; $n = (Z)^2 \cdot p \cdot q / d^2$ where, n = Sample size, P = Expected prevalence= 4%, p=.04 d = Degree of freedom if 5%, d=.05 Z= Differentiation coefficient, for level of confidence of 95%; Z=1.96 $n=1.96*1.96*.04*.96/ (.05)^2$ n=59.0 Thus, the sample size comes out to be almost 60 females.
2	Briefly describe the quantifications of a specific molecular marker expression as one of the outcome variables in blood samples of PCOS Patients.	Emerging evidence suggests that PCOS might be linked to the presence of a low-grade chronic inflammatory state with increased levels of IL-6, IL-18 and TNF-alpha in women with PCOS when compared with control. However, we expect that levels of these parameters should go down after treatment of cells with furostanolic saponins

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			(furocyst) and metformin. In addition we will also check levels of few other possible markers such as IL-1, IL-2, IL-8, IL-13, IL-12, IL-10, IL-15, IL-22, NFkB in granulosa cells. Immune cells such as monocytes, lymphocytes, eosinophils and granulocytes are up regulated in PCOS as compared to control group. So, we will study whether levels of these immune cells go down or not after treatment with furocyst and metformin. We are using some different immune cell types those levels are not known in PCOS, which may be act as a novel factor.
	3	Who will retrieve follicular fluid and granulosa cell from 20 patients with PCOS and 10 normal folliculcogenesis subjects of 20-35 age group. This is not mentioned in the role of investigator.	Follicular fluid will be collected by Prof. Dr. Renu Singh, department of Obstetrics & gynaecology from PCOS patients only. We will not need follicular fluid from healthy females with normal folliculogenesis as it is clearly mention in titles itself that we will work on **"granulosa cells in PCOS"**
	4	Oocyte retrieval in OBGYN is usually done in in-vitro fertilization(IVF) procedures under general anesthesia and transvaginal sonographic guidance-this may be possible only if 20 females with PCOS undergo oocyte retrieval for IVF in the time period of the study. Kindly include a paragraph regarding justification and feasibility of such issues.	We have clearly mentioned that **we will try** to collect follicular fluid from almost 20 female patients, if available, with age group of 20-35 years old. If we will be able to establish granulosa cell line from the very first sample, we will not need any more no. of samples. We would like to mention that also if in case we will not be able to get success in establishing granulosa cell lines Or we don't get follicular fluid in the tenure of study we will take it from CSIR-Institute.
	5	It has to explained that why would a female with normal folliculogenesis undergo oocyte retrieval and hyperstimulation of ovary.	We will not need follicular fluid from healthy women with normal folliculogenesis. It has been corrected.
	6	For IVF Procedures women are given large does of gonadotropins for hyperstimulation of ovaries, how will	As previously mentioned, we don't need follicular fluid from healthy females. And it has

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		they get follicular fluid and granulosa cells from women with normal folliculogenesis.	been corrected in Modified copy.
	7	The statistical analysis should be describe quoting the various outcome parameters as well.	Unpaired/paired t-test will be used to determine statistical significance between groups. P value less than 0.05 will be considered as statistically significant. (*p≤0.05; *p≤ 0.01). Data will be represented as mean ±standard error. Two tailed Student's t-test will be used to compare two groups (means +-SD).
	8	Many entries in annexure 1 need to be done.	All the entries have been completed. Copy is attached with modifications.
	9	Justify inclusion of normal women.	Normal healthy women between age group 18-40 years will be included. With no other abnormalities such as diabeties, CLD, Hypertension, Pituatry disorders, etc. for the study of level of various inflammatory and bio-markers in **peripheral blood samples** of normal healthy females as compared to PCOS patients.

- Multiple deficiencies in IEC form
- Sec 3
- Approval/marketing is incorrect
- What is the change in route? Where is the attached certificate from DCGI?
- Is this IND?
- No of subjects?

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Why use direct identifiers? • What samples will be sent abroad? • Where is the permission attached? • Why alternative treatment option not given? • Why consent form is not provided in English? • Risk benefits- fields filled wrongly • Compensation- fields wrongly filled • Conflict of interest? • Separate consent form for study participation and biomarker collection has to be provided, as mentioned in protocol. • We have no patient search agency. **The above comment forwarded to PR:-** ***Recommendation of PR:-*** • Section 7(ii) contradicts Section 7 (ix) • Approval for export of biological samples: not attached. There is a process and certificate for approval, as attached with proposal 720. • Section 8: consent: alternative to participation should be allowed. Without this, study is ethically not acceptable. **EC Comment:** Can samples send, if CDSCO approve. **EC Decision:** Approval subject to modification ***Ref. code: 116th ECMIIC/P1***
37	Clarification of research protocol no. LIB003-005 entitled "***Randomized, double-blind, placebo-controlled, phase 3 study to evaluate the long-term efficacy and safety of LIB003 in patients with cardiovascular disease on stable lipid-lowering therapy requiring additional low-density lipoprotein cholesterol reduction (LIBerate-CVD)***" sponsored by LIB Therapeutics, LIC submitted by Prof. Akahyaya Pradhan, Professor Jr, Department of Cardiology King George's Medical University, U.P., Lucknow, vide letter no. 190/Cardio/Res/2022 dated 12th July, 2022. ***Previous* EC Comment:***:* • The drug approval for marketing in any country- contradictory statements in IEC from and patient information form. • Document from DCGI about change in route of administration is missing. • The patient information sheet and IEC form are providing conflicting information about patient benefit. • Why use direct identifiers? • Risk benefits- fields filled wrongly, conflicting information from that provided in patient information sheet.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• If biological samples are not being collected(as mentioned in IEC form), what is being sent abroad? • Letter of permission to send samples abroad? • Consent section doesn't check compensation for study related injury. • From will Covid-19 patients are obtained. **The above comment forwarded to PR:-** ***Recommendation of PR:-*** • Section 3 (ii): PI states that trial drug LIB003 is approved for marketing in India, UK, Europe and US. This contradicts information provided in the brochure. Kindly explain. • Section 10: there is no intervention which will not cause discomfort. A subcutaneous injection is definitely a cause of discomfort. PI should refer to https://ethics.ncdirindia.org/asset/pdf/ICMR_National_Ethical_Guidelines.pdf. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 116th ECMIIC/P2***
38	Clarification of research protocol no. 0135-0347 entitled "***A phase IIB/III operationally seamless open label, randomized, sequential, parallel group adaptive study to evaluate the efficacy and safety of daily intervenous alteplase treatment given up to 5 days on the standard of care (SOC) compared with SOC alone, In patients with acute respiratory distress syndrome (ARDS) triggered by COVID-19"*** sponsored by PAREXEL International Clinical Research Private Limited submitted by Prof. R.A.S Kushwaha, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 596/RT/2022 dated 22nd June, 2022.

Previous EC Comment:	PI response
Study duration and participation details missing	Duration of the study is of 90 Days (Completion of study) Is mentioned in protocol page no-70of 140 and subject participation is mentioned in the protocol page no-5 of 140 (Participation details-Inclusion/Exclusion Criteria)
Why use direct identifiers?	Direct identifiers are used because it is a new drug clinical trial.
Why will data not be handled confidentially by staff?	CDA attached
Why is there no physical discomfort?	It is a new clinical trial and physical exam will be done it includes BP measurements, Body

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		temperature, Respiratory rate, Pulse rate, ECG and Vital signs.

The above comment forwarded to PI was reviewed by PR:-

Recommendation of PR:-

- IEC From in corrected form is not attached.
- The fact that a new drug is being tested is not a valid reason for using direct identifiers. It's against patient privacy and confidentiality.
- Daily iv injection (the intervention arm) is a physical discomfort.
- Cannot be accepted in the current form.
- PS: All revised submissions should be accompanied with a new IEC form.

EC Comment:

As above

EC Decision: Approval subject to modification

This trial was terminated vide letter no. 855/22 dated 27th July, 2022.

Ref. code: 116th ECMIIC/P3

39 Clarification of research protocol no. CA-170-302 entitled ***"A phase IIB/III, randomised, double-blind, placebo-controlled, study title: A multicentre, study of CA-170 in combination with chemotherapy in patients with stage IV non-squamous non-small cell lung cancer (ASIAD-3)"*** sponsored by M/s Aurigene Discovery Technologies Limited submitted by Dr. Sudhir Singh, Associate Professor, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 596/RT/2022 dated 22nd June, 2022.

Previous EC Comment:	PI response
KGMU is not a study site in submitted documents	DCGI notification of the will be done at the earliest and acknowledgment will be shared with you.
Blood will be collected, it's a biological material.	As per ICF pg no-8 of 30, it is a biological material will be taken for routine tests to check blood counts, chemistries.
Duration of study and subject participation not mentioned.	Duration of the study and subject participation is mentioned in the protocolv1.0., dated 21/ June / 2021, page no-24.
Why will direct identifiers be used?	Direct identifiers be used because it is new drug clinical trials.
Physical Discomfort not filled	As per ICF pg no-7 of 30 Point no-3.A complete physical examination will be done.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Benefit to participants not clarified.	Benefits to participants is mentioned in the Informed Consent form and its translations and back-translations.

The above comment forwarded to PI was reviewed by PR:-

Recommendation of PR:-

- Fresh IEC form has not been filled.
- A lot of information is present in the Investigator brochure. It's the PI's duty to fill it in the IEC form, not that of IEC to search for it in 100s of pages of documents.
- The fact that it's a new drug doesn't justify use of Direct Identifiers.
- PI should ensure that all the sections are filled properly.

EC Comment: As above

EC Decision: Approval subject to modification

	Height: 157 CM **Patient History:** A letter was received in the office of the Ethics Committee on 26th May, 2022. The letter stated that SAE occurred on 12th May, 2022 around 11:00. Earlier to that, telephonically called several times to remind the subject about follow up visit, but he had not replied. On 12th May, 2022 subject's son was telephonically called by the principal investigator. LAR had informed that **Subject expired on 25th March, 2022**. LAR said that on 25th March, 2022, subject was not feeling well since afternoon around 14:00 P.M., having weakness and pain in one and half of the body and was unable to move the limbs for which patient was brought to trauma centre, where he expired at around 9:00 PM on 25th March, 2022. Death Certificate is provided by subject's son. ***Recommendation of Primary reviewer:-*** • SAE (Death) is likely due to disease outcome (Acute Coronary Syndrome / Non ST Elevation MI) as patient was enrolled in Treatment arm (given Intervention in the form of Pelacarsen-TQZ230 –A Lipoprotein (a) lowering agent 80 mg monthly SC on 13th March, 2022) and 12 days has elapsed since taking the interventional drug. It has been told by LAR to PI that patient was not feeling well since afternoon on 25th March, 2022, having weakness and pain in one half of the body and was unable to move the limbs and expired in trauma centre around 9:00 pm on same date. • Causal relationship cannot be established as death occurs at hospital (trauma center) due to cardiopulmonary arrest with hemiplegia. • Death certificate is attached. **ADR sub Committee Comment:** As above **ADR sub Committee Decision:** Noted ***Ref. code: 101st ECMIIC/P18***

Gender: F
Age: 70 years

Date of enrollment: 28th May, 2018

Patient follow up under study: Enrolment (Baseline) Month 6, Month 12, Month 18, Month 24, Long term consent, Tel. Month 30, Tel. Month 42, Tel Month 54, Tel Month 66, Tel Month 78.

Weight: 55.0 KG
Height: 154.0 cm

Subject History: The contact was made to get long term follow up

Site person made several calls for follow-up visit but calls were not answered. They tried again on 7th April, 2022 around 11:15 AM. Subject's LAR informed that she passed away on 4th October, 2021 at around 5:00 PM. The LAR revealed that patient had complaints of weakness, and breathlessness for which she was taken to the hospital and expired on the way to the hospital. She was not hospitalized hence no papers are available and autopsy was not done. Only Death Certificate received.

Previous ADR sub Committee Comment:

- The subject was enrolled on 28-05-2018. According to this her 30th month follow up would have fallen in November, 2021. The SAE was, however detected on 7th April, 2022. Explanation may be sought for the skipped follow up.
- The SAE (death) doesn't to be related to the study

Previous ADR sub Committee Decision:

- Ask for explanation

Institutional Ethics Committee Meeting,

OFFICE OF THE ETHICS COMMITTEE

Administrative Block

Minutes of 117th IEC Meeting held on 30th July, 2022

(Registration No.: ECR/262/Inst/UP/2013/RR-19)

1.	Research proposal entitled ***"Prevalence of Hepatitis B and Hepatitis C among IDUs of Lucknow"*** submitted by Prof. S.K. Singh, Department of Community Medicine & Public Health, King George's Medical University, U.P., Lucknow vide letter no. 147/CM/22 dated 10th May, 2022. ***Recommendation of PR:-*** • IDU – No fullform has been given anywhere. But I think they mean 'intravenous drug users'. The participants will be included from the hotspots. They are not the one who are coming to the hospitals. If the participant agrees to give written consent and give sample then there are probably no issues. But the participants are drug addicts and I don't know if they will accept it and let it know to others unless they are into some reforms centre. Will like others to give opinions. • The patient information document says that 'the participants are included as per inclusion criteria' in answer to the question of 'Why have I been chosen'. But the answer should include what are the inclusion criteria. Also to the question 'What I have to do'; the answer should be that you will have to give urine sample. • Dr Manish Manar is M Tech and is in community medicine. Please check. **EC Comment:** As above **EC Decision:** Approval subject to modification with tabular format in word file. ***Ref. code: 117th ECM IIA/P1***
2.	Research proposal entitled ***"Prevalence of iodine deficiency disorder among-6-12 years School Children of Uttar Pradesh"*** submitted by Prof. S.K. Singh, Department of Community Medicine & Public Health, King George's Medical University, U.P., Lucknow vide letter no. 148/CM/22 dated 10th May, 2022. ***Recommendation of PR:-*** • It is an epidemiological study to assess iodine level in about 27000 school children in villages in UP. Clinical examination for goitre and urine iodine levels will be measured in children from 6 to 12 years. Written consent will be taken. Who will be giving consent? Parents' consent and child assent are required. Don't know if written consent will be necessary for urine collection. How will the parents contacted. The patient information is there. But these are not patients. May be there can be information brochure for the parents of the participating children. The patient information document says that 'the participants are included as per inclusion criteria' in answer to the question of 'Why have I been chosen'. But the answer should include what are the inclusion criteria. Also to the question 'What I have to do'; the answer should be that you will have to give urine sample.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)

Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Primary reviewer: • There are too many objectives. There should be one primary objective, and the rest can be covered in secondary objectives. Actual, other objectives would be side products of main objective. • The sample size calculation is missing. • How the items were generated for the questionnaire. Do they come from previous scales/ clinical observations/expert opinion/research findings/theory? • How the scale will be evaluated for internal consistency (reliability)? • Does the scale have face validity/ content validity/ construct validity? **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P9***
10.	Research proposal entitled ***"A prospective pilot study to analyze the changes in the angle of the penis from midline, and dimensions of the urethral meatus on pulling of the prepuce or the skin of the penis, in patients of a North Indian tertiary care Hospital"*** submitted by Prof. Divakar Dalela, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 243/Uro/22 dated 4th May, 2022. ***Recommendation of Primary reviewer:*** Approved **EC Decision:** As above ***Ref. code: 117th ECM IIA/P10***
11.	Research proposal entitled ***"Randomized multi-center study to evaluate the efficacy of single versus double drains in breast cancer patients undergoing surgery"*** submitted by Dr. Pooja Ramakant, Professor Junior Grade, Department of Endocrine Surgery, King George's Medical University, U.P., Lucknow vide letter no. ENDOSURG/161/22 dated 14th May, 2022. ***Recommendation of Primary reviewer:*** • Title and primary objectives do not match. • Title says: Randomized Multi-center study to evaluate the efficacy….. • Primary objective says: To document the rate of seroma formation in both the groups. • If it is really randomized multi-center study, all the pre-requisite should be mentioned properly. • There are protocols for RCT. All those be properly defined. • There are protocol/guidelines for Multi-center studies. All those should be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	mentioned. • Sample size calculation is arbitrary. It is ambiguous in the absence of proper research hypothesis. • Statistical Analysis section is also very general, not specific to the study. **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P11***
12.	Research proposal entitled ***"Evaluation of needle tapping in the outcome of pneumoperitoneum in neonates and infants"*** submitted by Dr. Gurmeet Singh, Assistant Professor, Department of Pediatric Surgery, King George's Medical University, U.P., Lucknow vide letter no. 370/PedSrg/22 dated 20th May, 2022. ***Recommendation of Primary reviewer:*** • Proper research hypothesis should be defined after identifying the study variables and population parameters involved. • Study design is not given. • Sample size calculation and statistical analysis are missing. **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P12***
13.	Research proposal entitled ***"Mucormycosis: A comparative study between endoscopic and radiological features"*** submitted by Dr. Manish Chandra, Associate Professor, Department of Otorhinolaryngology & Head & Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no. 120/ENT/MC/22 dated 20th May, 2022. ***Recommendation of Primary reviewer:*** • Proper research hypothesis should be defined after identifying the study variables and population parameters involved. • Study design seems to be case-control study. • All the fundamentals for case-control study should be clearly outlined. • Sample size calculation and statistical analysis are missing. **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P13***
14.	Research proposal entitled ***"Using computer generated models (artificial intelligence) to predict mortality and outcome in hospitalized patients"*** submitted by Dr. Vivek

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Gupta, Additional Professor, Department of Surgical Gastroenterology, King George's Medical University, U.P., Lucknow vide letter no. SG/260/22 dated 13th May, 2022. ***Recommendation of Primary reviewer:*** • Proper research hypothesis should be defined after identifying the study variables and population parameters involved. • What kind of model (Statistical) will be used? • I think, a statistician should be included in order to develop proper prediction model. • Study design mentioned is "observational". • How an observational study can be used for developing an prediction model. • Sample size calculation is missing. **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P14***
15.	Research proposal entitled ***"Assessment of treatment outcomes for sebaceous cell carcinoma eyelid"*** submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/814/22 dated 24th May, 2022. ***Recommendation of Primary reviewer:*** • Proper research hypothesis should be defined after identifying the study variables and population parameters involved. • Study design is not clear. It says: single center, observation, retrospective case series study. • Sample size calculation is missing. • Statistical method section is very general, not specific to the study. **EC Comment:** As above **EC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: 117th ECM IIA/P15***
16.	Research proposal entitled ***"Assessment of treatment outcomes for carcinoma vulva"*** submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/789/22 dated 24th May, 2022. ***Recommendation of Primary reviewer:*** • The status of vulnerable subjects need to be clarified • What is the rationale of sample size of 30? • This is labeled as a retrospective data analysis of 30 patients treated between

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	2017-2022 and requires estimation of survival (disease free and overall). Hence a Prospective arm of follow-up for 3-5 year need to be undertaken and patient examined for disease free status. Hence ethical approval may need a consent process to be incorporated as well. **EC Comment:** As above **EC Decision:** Approval subject to modification with tabular format in word file. ***Ref. code: 117th ECM IIA/P16***
17.	Research proposal entitled ***"Assessment of treatment outcomes for esophageal cancer"*** submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/790/22 dated 24th May, 2022. ***Recommendation of Primary reviewer:*** • The status of vulnerable subjects need to be clarified • What is the rationale of sample size of 65? • This is labeled as a retrospective data analysis of 65 patients treated between 2017-2022 and requires estimation of survival (disease free and overall) . Hence a Prospective arm of follow up for 3-5 year need to be undertaken and patient examined for disease free status. Hence ethical approval may need a consent process to be incorporated as well. **EC Comment:** As above **EC Decision:** Approval subject to modification with tabular format in word file. ***Ref. code: 117th ECM IIA/P17***
18.	Research proposal entitled ***"Effectiveness of kinesio taping in management of low back pain"*** submitted by Dr. Narendra Singh Kushwaha, Additional Professor, Department of Orthopaedic Surgery, King George's Medical University, U.P., Lucknow vide letter no. 2182/OS/22 dated 21st May, 2022. ***Recommendation of Primary reviewer:*** • Patient information sheet to be attached as per SOP • In ICF 'study procedures' and 'benefit of study' are written in past tense and therefore ICF needs to be revised • Sample size calculation need to be mentioned • The page where role of PI is mentioned it has to be clarified if investigator is from pulmonary medicine also or only from orthopedics

(Shally Awasthi)

III	**Adverse Drug Event**
1.	ADE research protocol no. Prax A Study entitled ***"A post marketing surveillance study of prax a 75th (Fixed dose combination capsule containing prasugrel 10mg and sapirin 75mg) in patient with acute coronary syndrome (ACS) who are to be managed with percutaneous coronary intervention (PCI)"*** submitted by Prof. Sharad Chandra, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 118/Cardio/Res/2022 dated 1st June, 2022. **Subject ID-** 05070 **Subject initial:** M-D **Gender:** F **Age:** 66 years **Date of enrollment:** 09-12-2021 **Start date:** 18th May, 2022 **Stop date-** Ongoing **Date of awareness-** 18th May, 2022 **Severity-**Moderate **Causality-** Not done **Subject History:** A letter was received in the office of the Ethics Committee on 1st June, 2022. Subject came into the hospital OPD on 18th May, 2022 with the complaint of breathlessness, chest pain and angina on exertion from last 20 days; She was hospitalized for medical management. It is not related study drug. ***Recommendation of Primary reviewer:*** • The SAE (Hospitalization) is likely due to disease outcome (AWMI /TLT-ve(2019).P/PCI to LAD -09-12-21) and not due to intervention (Prax A 75 –Prasugrel 10 mg + Aspirin 75 mg) as subject completed 3 visits without any adverse drug event. She was hospitalized on 18-05-22 due to chest pain (angina) and underwent CART on 19-05-22 without any complications and was discharged (on 20-05-22) in hemodynamically stable condition. • Therefore causal relationship is unlikely due to intervention and patient managed successfully after the SAE (Hospitalization). **EC Decision:** Reviewed

1 With refer to the letter no. DCGI/2022/0534 dated 14th July, 2022, PI has informed that DSMB meeting held on 24th February, 2022, it has been recommended to not open Nitazoxaninde + Ciclesonide treatment arm for Anticov-India study based on the futility results received from Antocov-Africa study interim analysis. As Anticov-India study is platform-based study with provisions for adding and deleting different treatment arms (depending on the result of the interim analysis), amendment to the protocol is not required. The effective version will be 4.0 with two treatment arms (Paracetamol and Fluoxetine + Budesonide). for this reason, the inclusion/exclusion criteria specific to this

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Research hypothesis and objective are not in conformity. Research hypothesis mentions it as a "comparative study", whereas the objective mentions it as a "correlation study".	As per your advice this study as an correlation study. Evaluation of correlation between Bispectral index and Riker sedation agitation scale in Intensive care unit.
Sample size calculation is not clear. There is no or poor justification for selecting the values in the formula.	Sample size calculation attached separately.
Statistical Analysis section is very general and not specific to the study.	Statistical analysis will be done using the Software Statistical Package for the Social Sciences (IBM SPSS statistics version 23rd IBM Corp, Armonk, NY). The dichotomous variables will be presented in number/frequency and will be analyzed using Chi-square or Fisher Extract test. For comparison of the means between the two groups, analysis by Student t-test, Mann-Whitney U test, with 95% confidence interval will be used.Spearman's squared rank correlation coefficient (r^2) & the Kendall rank correlation coefficient will be calculated.

13-	Clarification of research proposal entitled ***"Retrospective and prospective outcome analysis of surgical management of spinal tuberculosis patient"*** submitted by Dr. Kishore Parihar, JRI, Department of Orthopaedic Surgery, King George's Medical University, U.P., Lucknow vide letter no.2355/OS/22 dated 7th June, 2022.

Previous PGTSC Comment:	**PI response**
Sample size calculation has not been done.	Retrospective study - All operated cases of spinal tuberculosis admitted in Department of Orthopaedics, KGMU, Lucknow from register based data January 2017 to June 2020 with minimum follow up of one year. Prospective study- All operated cases of spinal tuberculosis admitted in Department of Orthopaedics, KGMU, Lucknow from OPD basis data July 2020 to June 2021.
Details of treatment/surgical protocol not mentioned.	All patients undergoing operative intervention were managed by debridement, decompression and posterior instrumentation.
Details of follow up not mentioned.	Patients with minimum follow up of one year will be included in our study. Patients will be followed initially at 6 weekly interval for three months than at 2 monthly interval for next 10 months. At every follow up patients will be evaluated clinically, neurologically,

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		haematologically and radiologically. Clinical evaluation included presence of pain (VAS score), weight gain. Neurological evaluation will be done through FRANKEL grading, Haematological evaluation included CBC, CRP, LFT, KFT. Radiological evaluation included serial x-rays and MRI at final follow-up.
	Clinical end point mentioned.	Clinical end point will be defined as absence of pain, haematological subsidence of blood counts to baseline level and radiological healing of lesion evaluated through xrays and MRI (subsidence of edema and decrease in size of abscess).

15- Clarification of research proposal entitled ***"Amniotic membrane as a therapeutic agent for pulpotomy in permanent molars: A randomized controlled trial"*** submitted by Dr. Saumya Johri, SR, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 109/COMS & Endo/22 dated 15th June, 2022.

Previous PGTSC Comment:	PI response
Aims and objectives are stated in two different statements. These statements should be combined to make it "efficacy trial".	AIMS AND OBJECTIVES: To compare the clinical and radiographic efficacy of amniotic membrane (AM) and mineral trioxide aggregate (MTA) when used as a pulpotomy agent in carious permanent molars with irreversible pulpitis.
Research hypothesis should be defined in terms of properly identified parameters of the study.	For the study we have utilized equality hypothesis.(H_0: μ_t-μ_c = 0 where μ_t is the mean outcome response for test treatment and μ_c is the mean outcome response for control treatment). Therefore, the hypothesis was that amniotic membrane (Group 1) may have equal clinical and radiographic efficacy(parameters defined below) to Mineral trioxide aggregate (Group2). Parameters for defining a clinical success: 1-Absence of pain and sensitivity to hot and cold. 2-Absence of abscess/sinus 3- Absence of tooth mobility. 4- Absence of gingival/periodontal inflammation. Parameters for defining radiographic success: 1-Absence of periapical/furcal radiolucency 2-Pathological internal/external resorption 3-Intact lamina dura
The fundamentals of performing RCT are not completely specified: Clinical Trial Registry, method of randomization, blinding, follow-up, outcome event, efficacy or effectiveness trial, Statistical and methodological issues in RCT	**Clinical Trial registry:** CTRI registration has been applied for. Ref No: REF/2021/12/050056 (Date: 26/12/2021) **Method of Randomization:** The current study is a double blinded, parallel arm trial. The teeth will be randomly allocated to two groups(Group 1-AM) (Group 2-MTA).Randomization will be done using a variable block size, using nQuery Advisor

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		software. The sequence of randomization will be obtained from the statistician who is independent of the study. Allocation concealment will be done by sealed opaque envelopes kept at the reception of department's clinic and handed over to the operator at the time of treatment by an independent third person. **Blinding:** The study is a double blinded study where the participants and the outcome assessors are blinded to the particular intervention. Allocation concealment will be done by sealed opaque envelopes kept at the reception of department's clinic and handed over to the operator at the time of treatment by an independent person (department's non-clinical staff). Follow-up: Clinical procedure will be done by a single trained dentist and follow-up evaluations will be performed by two blinded evaluators. Follow-up at 1, 6 and 9 months following the procedure will be done to assess the clinical and radiographical success. Outcome event: The primary outcome of the study will be success of pulpotomy technique using AM at 9 months on examination. Clinical success will be defined by the absence of signs and symptoms such as pain, inflammation, abscess/sinus, mobility and gingival/periodontal inflammation. Radiographic success will be defined as the absence of (i) periapical/furcal radiolucency, (ii) pathological internal or external resorption, and (iii) integrity of lamina dura.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Any other adverse event(s) will be reported. **Efficacy or effectiveness trial:** The current trial is an Efficacy trial (explanatory trial) to determine whether the experiment agent, amniotic membrane (AM) produces pulpotomy success (expected result) under ideal circumstances. Statistical issues: Explained in further replies.
	Since, the research hypothesis is not defined, the sample size calculation is not clear	**Research hypothesis-** Amniotic membrane (Group1, experimental arm,) may have equal clinical and radiographic efficacy (parameters defined above) to Mineral trioxide aggregate (Group2 control arm). **Sample size calculation-** **On the basis of reference study,** Sample size is calculated on the basis of minimum success rate in clinical & radiological parameters of the two groups out of all the groups under study using the formula $n = \frac{(z_\alpha + z_\beta)^2}{[\ln(1-e)]^2}\left[\frac{1-p_1}{p_1} + \frac{1-p_2}{p_2}\right]$ Where p_1 = 0.52 (52%) proportion of minimum success rate in first group p_2 = 0.652 (100%) proportion of minimum success rate in second group (Prasad MG, Adiya P, Babu DN, RadhaKrishna AN. Amniotic Membrane versus Formocresol as Pulpotomy Agents in Human Primary Molars: An in vivo Study. 2017;9) $e = 0.5(p_1/p_2)$, the risk ratio considered to be clinically significant Type I error, α=5% Type II error β=10% for setting power of study 90% Loss to follow up = 10% The sample size is calculated to be **n = 14 each**

	Please provide the cost of treatment.	Routine endodontic surgery (receipt in favour of Department of Conservative Dentistry and Endodontics) : RS 1500 /- Study will be self – sponsored for any of the bone regenerative modality used : Amniotic membrane procured from TATA MEMORIAL HOSPITAL , Mumbai is for Rs 280/- per packet (single use) Simvastain 10 mg tablet (SIMVOTIN 10 , Sun pharmaceutical Ind.Ltd) – Rs 14.5 / tablet . Gelatin sponge (hemosponge) as carrier – Rs 310 / box of 32 sponges each of size 10 x 10 x 10 mm L-PRF - Autologus Blood Study will be done in collaboration with Department of oral medicine and radiology for CBCT analysis .
	Explain to the patient about 3 bone healing materials that may be used for his/her treatment in ICF and also that any of these 3 materials may be used in the ICF.	Revised Informed Consent Form attached in paper format Study procedures: •Use of L-PRF , amniotic membrane and simvastatin as bone regenerative modalities in peri apical surgery of endodontic origin. L – PRF will be prepared from patient's own blood (10 ml) in centrifuge machine. Amniotic Membrane will be procured from Tissue Bank, TATA Memorial Hospital, Mumbai, India for the study. Simvastatin 10 mg tablets (SIMVOTIN 10 , Sun pharmaceutical Ind. Ltd.) will be used with gelatin sponge as carrier . Any of the above mentioned modality may be used. The intervention to be given will be decided by allocation concealment method. For this purpose sequentially numbered, opaque, sealed envelopes (SNOSE) will be prepared and kept safely. Comparing radiographic changes in the size of the periapical defects after endodontic surgery by utilizing three bone regenerative modalities using CBCT.

The above comment forwarded to PI was reviewed by PR-

- The study procedure still is not properly explained.
- Patient must know for his benefit, why he has been selected for one of the three materials. Please explain him that as part of study, we may use any three of these, all of these are known materials and this will not affect the result of his treatment. So that he is convinced to take part in the research.
- If we do not explain, It is violation of Autonomy because only then he will be able to take appropriate decision for himself.
- In case , his treatment fails and he goes to court, only this properly written consent form can save the researcher.
- Procedure in the ICF means "what will be done with ***him***", should be explained to the patient.
- This is not the same as explained in the Proforma, which is a scientific document.

	Research hypothesis is missing.	MRI based Image-Guided Adaptive Brachytherapy(IGABT) is the current gold standard for brachytherapy in Carcinoma Cervix, But in a country like India, limited resources and other logistics issues are a road block to MRI based IGABT. So we tried to evaluate the dosimetric difference between HRCTV D90 and D_2CC of rectum, bladder and bowel in MRI based and CT based brachytherapy, to see if CT based brachytherapy in Carcinoma Cervix can become an upcoming practice.
	The variables and parameters should be explicitly identified for the study.	• HRCTV D90 • D_2CC of Rectum • D_2CC of Urinary bladder • D_2CC of Bowel
	In the absence of proper research hypothesis, the sample size calculation has no meaning.	Since it is a pilot study and due to logistic issues, sample size is taken to be 25.
	The statistical analysis section is missing.	Statistical Analysis will be done using SPSS software 22nd version, with considering the P-value to be significant below 0.05.

Start date of the project is given as June 2021 and the project is to be completed by June, 2022. Without IEC approval how was the project initiated? A clarification may be taken.	This study is one year, study start in after getting approval of ethical clearance.
Sample size is 100, why this number of subjects will be taken is not mentioned. If it is a pilot study then it may mentioned.	This is a prospective study, Sample size is taken to be 99. Using the formula $n=\frac{(z_{1-\alpha/2})^2 \times p \times q}{d^2}$ Where n= sample size, $z_{1-\alpha/2}$= value of normal deviate at 95 percent confidence interval, p= prevalence, q=1-prevalance, e= absolute error the sample size was calculated to be 98.9. Final sample size=99.

Previous PGTSC Comment	PI response
Section on use of biological material does not mention biopsy specific harvesting.	Target biopsy sites are areas showing and endobronchial growth and/or abnormal appearing mucosa as seen by both WL & NBL.
There is no mention of how NBI bronchoscopy findings will be quantified/recorded/correlated with HPE results.	Based on consensus among the two bronchoscopists a particular NBI pattern to be labeled for each patients. In such patients were consensus could not be attained, opinion of 3rd bronchoscopists to be taken.
Ideally Co-PI cannot be a member of the	As per you discussion with HOD, PCCM,

Ideally some faculty member should be recruited as co investigator.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• In inclusion criteria, no reference of CT angiography is given for selection in case or control group, whereas study group is mentioning it. Kindly clarify the role of CT angiography in selection of patients but not including it as inclusion criteria. • What will be the time for collecting blood sample for markers? • Are all these markers are routine investigations? • Who will bear the cost for additional investigations, if any? ***Comment of Secondary PR:*** • This is not a case-control study. The case-control study is retrospective study. • The objectives are mixed up. They are trying to compare the two groups. So it should be a comparative trial. • At the same time they are talking about finding sensitivity and specificity of some markers. This comes under "diagnostic test". • Sample size calculations are not given. This can be done only when proper research hypothesis is defined. • Statistical analysis is not clear. Actually it should be in coherence to proper research hypothesis. ***The above comments forwarded to the PI: Reply pending.*** **PGTSC Comment:** • Forwarded to both Primary reviewers ***Recommendation of PR*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: XI PGTSC-I B /P2***
3-	Expedited review of proposal entitled ***"A study of association between hypertension and cognition in people over 60 years of age: A cross sectional study"*** for ICMR STS-2022 submitted by Ms. Nivedita Parandiyal, MBBS 2nd Year under the guidance of Dr. Shailendra Mohan Tripathi, Associate Professor, Department of G.M. H., KGMU vide letter no.1614/DGMH dated 27th May, 2022. ***The above proposal forwarded to two Primary reviewers, reply has given by the both reviewers with following comments:*** ***Comment of First PR*** • The title of the study mentions it is a Cross sectional study, however, it is actually a Case control study. The title may be suitably modified. • No justification for sample size of 40 cases and 40 controls has been given. Kindly explain. ***Comment of Secondary PR*** • Sample size calculation not done (Duration of study is not the criteria for

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	calculated sample size)-Please give sample size as it is not the Pilot study. • Kindly provide Semi structured Proforma on sociao-demographic data. • Kindly provide Approval letter from ICMR and budget. ***The above comments forwarded to the PI response has given by PI was forwarded to both PR.*** ***Second opinion of Secondary reviewer:*** Approved ***Second opinion of First PR:*** • The title mentions that is it 'A study of association between hypertension and cognition in people over 60 years of age'. The primary objective also mentions comparison with non-hypertensive individuals. However, she said **'association'** cannot be determined without a control group. The modified proforma does not mention a control group. If the study proposes to compare the findings with the already known data, the study must measure 'prevalence' as the primary objective. • A cross-sectional study can be used to measure of prevalence, a 'case control study can be used to measure' association'. • I will suggest either title modification to 'measure of prevalence of cognitive impairment in hypertensive patients' or changing the type of study to 'case control study'. I will also suggest modifying the primary objective. • The inclusion criteria do not mention hypertensive patients. • Justification for new sample size is well accepted. ***The above comments forwarded to the PI response have received by PI on 22nd July, 2022.*** **PGTSC Decision:** Approved ***Ref. code: XI PGTSC-I B /P3***

4-	Clarification of research Protocol no.RLS/CNS/2020/01 Version 3.0 Dated 12 Nov,2020, entitled "***A prospective, multi-center, randomized, parallel group, two-arm, active control, open label, clinical study to evaluate efficacy and safety of Tenecteplasr/R-TPR-012(0.25mg/Kg) compared with acute ischemic stroke***" sponsored by Ahirubhai Ambani Life Sciences Centre submitted Dr. Imran Rizvi, Assistant Professor, Department of Neurology, King George's Medical University, U.P., Lucknow vide letter no.379/Neuro/2022 dated 3rd August, 2022.

Previous EC Comment	PI response
The control arm also has the same drug (Tenectase). What is being tested, drug efficacy or dosage or new usage?	This trial compare two doses and two products for new indication. Presently RLS tenecteplase is approved for acute MI.
The study is supposed to be randomized but in the methodology the PI states that patients with up to 4.5hrs of ischemia time will be selected for both groups. This introduces bias. Please comment.	The comparator product chosen in this study is Tenectase which is to be administered within 3 hrs of onset of stroke. While RLS tenecteplase is proposed to be used within 4.5 hrs. In order to comply with randomization and also the time limit for dose administration we have designed randomization as follows: a) Randomization would be 2:1 (150 test , 75 reference) b) So there will be limit to maximum number of subjects that can get randomized to reference arm and subjects randomized to test arm would be more. It is likely

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

			that some of the patients would receive the drug at > 3 hrs to & it; 4.5 hrs c) Accordingly the following design will be followed and the bias would be prevented. So 150 subjects will be randomized exactly as per the randomization plan. Remaining 75 subjects would be those who receive the test product i9n 4.5 hrs. RANDOMIZATION PLAN IN TENECTEPLASE STUDY
		Tenecteplase is and established anti-thrombolytic agent. What is objective of study then? Is this a trial to find new usage of drug?	Yes
		Involvement of vulnerable participants is not mentioned. Please mention in IEC form.	RLS: Okay. (Vulnerable subjects will not be enrolled.)
		Numbers of subject in IEC form is given as 50 and in the methodology submitted to scientific review committee of department it is given as 225.	It's a typo error. Number of subject is 225.
		The parallel arm has the same drug (Tenectase) the justification for which has been asked from the PI.	This being a biological product and not a small molecule, it is appropriate to evaluate safety and efficacy of test and reference.
		Study is funded by private Indian pharmaceutical firm.	Yes, funded by Reliance life sciences pvt ltd.
		Informed consent mentions that there is only one study group- the one receiving the test drug. This has to be modified.	Please refer protocol page no. 76 of 106. "This is a two arm study. One arm will receive TenectaseTM (reference drug) which is approved in treatment of acute ischemic stroke. Other arm will receive study Drug {R-TPR-012, Tenecteplase (Tenecteplase manufactured by Reliance life sciences Pvt Ltd)} and your study doctor will know that you are receiving study Drug {R-TPR-012, Tenecteplase (Tenecteplase manufactured by Reliance life sciences Pvt Ltd)} or reference drug (TenectaseTM). Both the drugs contain active product called as

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	Tenecteplase."
Not given in consent form. Name and contact details of on- site PI/ Counselor must be mentioned in consent form.	Template has been provided in ICF which will be filled at site level.
Indirect identifiers/ coded in privacy & confidentiality.?	Confidentiality will be maintained. Each participant will be identified by unique subject ID.
Does the study involve a change in use of drug from Acute stroke? this has not been mentioned in IEC form.	No. As this drug will be used post regulatory approval only for acute ischaemic stroke (and for existing approved indication). Therefore such text has not been added.
The CTRI form does not have mentioned of KGMU site.	Will be added in new sites.
Roles of PI and Co.Inv's are overlapping.	Administrative point of view, PI can delegate his job to Co-I.

Previous EC Decision	PI response
The title has short form which is not explained. I do not know what is ROCM. On the page 11 of 13, the full form is mentioned. Rhino Oculo Cerbral Mucormycosis.	All the abbreviations used in this research proposal proforma have been explained under the heading "Abbreviation used'
5-vi-No answer about vulnerable subjects.	It is a retrospective study there will be no direct involvement of subject during the course of the study.
It is mentioned on point 8, that the written consent will be taken and patient information brochure is attached. But there is neither of them	Patients presented to us curing the epidemic of mucormycosis. All clinically and microbiologically confirmed cases were admitted and written informed consent was taken from each patient before surgery. Since the study is a retrospective analysis of data there is no requirement of consent forms. Hence not attached.
It is retrospective analysis of data. Please confirm if consent will be taken or not. If the answer is 'yes' provide appropriate document.	-----
It is mentioned that the patient will be directly benefited. How?	This is the first episode of mucormycosis epidemic all over India till date. No definitive management protocol has been established till date in the country. This is a single centre study. We have formulated management protocol which will benefit mucormycosis patients in for coming years.

The above comments forwarded to PI which was reviewed by Primary reviewer with following comments.

Second opinion of PR	PI response
Abbreviation should not be used in the title	The Title has been changed entitled *"Management of Rhino-orbito-cerebral mucormycosis (ROCM) : A clinic-radiological study- An institutional experience"*
Written consent for surgery is different from the written consent for participation of the study	Since this is the Retrospective study, consent for research purposes was taken alongwith consent for surgery. So, we are using the same consent for the study.
Management was done based on the protocol is helpful for the patient. But study is not benefitting the patient directly.	Mucormycosis epidemic happened during covid pandemic. Never before in the history of mankind such use mucormycosis patient have been dealt with. So no proper protocol was available in

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		literature thus we have developed a protocol for management of patients of mucormycosis which will benefit forthcoming generations.
	The permission for the retrospective data analysis should be taken, Appropriate modifications in the application are needed.	The permission for data analysis was taken at the time of admission/ surgery.

a) Why have I been chosen? b) What do I have to do?	1. Intravenous Drug Users (IDU) 2. IDUs age more than 18 years at the time of sample collection 3. IDUs taking drugs since at least 3 months 4. IDUs living in Lucknow for more than 3 months. Will have to give blood sample (5ml) for Hep B and Hep C testing. No other lifestyle or dietary restriction required by the study.
Dr Manish Manar	Working as Additional Professor (Junior grade) (B.Tech., M. Tech, PhD.) in Public Health Engineering in the Department of Community Medicine and Public Health, KGMU UP, Lucknow

The above Comment forwarded to PI reviewed by PR:-
Recommendation of PR:

- The replies are ok.
- But there were concerns about how the participants will be identified and selected. Whether the participants will give written consent? How the documentation of drug use will be done? Is it ok to go to the hot spots without police information?
- The participants will be included from the hotspots. They are not the ones who are coming to the hospitals. If the participant agrees to give written consent and give a sample then there are probably no issues. But the participants are drug addicts and I don't know if they will accept it and let it know to others unless they are into some reforms centre.
- **Will like others to give opinions.**

EC Decision: Approved if the study is from registered Deaddiction Centre.

There should be one primary objective, and the rest can be covered in secondary objectives. Actual, other objectives would be side products of main objective. • The sample size calculation is missing. • How the items were generated for the questionnaire. Do they come from previous scales/ clinical observations/expert opinion/research findings/theory? • How the scale will be evaluated for internal consistency (reliability)? • Does the scale have face validity/ content validity/ construct validity? ***The reply of the PI to the above Comments was forwarded to the PR:-*** ***Recommendation of PR:*** Provisionally approved **EC Decision:** Approved ***Ref. code: 117th ECM IIA/P9***
14-	Clarification of research proposal entitled ***"Randomized multi-center study to evaluate the efficacy of single versus double drains in breast cancer patients undergoing surgery"*** submitted by Dr. Pooja Ramakant, Professor Junior Grade, Department of Endocrine Surgery, King George's Medical University, U.P., Lucknow vide letter no. ENDOSURG/299/22 dated 9th September, 2022.

Previous EC Comment	Previous EC Decision
Title and primary objectives do not match. Title says: Randomized Multi-center study to evaluate the efficacy…..Primary objective says: To document the rate of seroma formation in both the groups.	Title: **'Randomized Multi-center study to evaluate the efficacy of single versus double drains in Breast Cancer Patients undergoing surgery'** Primary objectives have been modified to: **'To evaluate the efficacy of single versus double drains in Breast Cancer Patients undergoing surgery'** Secondary objectives - 1.To document the rate of seroma

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		formation in both the groups. 2.To note down the number of days post surgery drain removal done in both the groups. 3.To document any surgical site infections in both groups. 4.To document hospital stays in both groups. 5.To compare the quality of life in both groups.	
	If it is really randomized multi-center study, all the pre-requisite should be mentioned properly. There are protocols for RCT. All those be properly defined	**RCT protocol has been attached along with this file** Once ethical approval is obtained, the project will also be registered in CTRI.	
	There are protocol/guidelines for Multi-center studies. All those should be mentioned.	An application for ethical approval has also been sent to the Institutional Ethics Committee of Dr Ram Manohar Lohia Institute of Medical Sciences, Lucknow.	
	Sample size calculation is arbitrary. It is ambiguous in the absence of proper research hypothesis.	Sample Size=79 Considering Prevalence of 36.4% as per study: *Ebrahimifard F. Effect of One versus Two Drain Insertion on Postoperative Seroma Formation after Modified Radical Mastectomy. Novel Biomed. 2016;4(2):45-50*, confidence level of 95% and margin of error of 5%. Formula used is- $n = \frac{z^2 \times \hat{p}(1-\hat{p})}{\varepsilon^2}$ $n' = \frac{n}{1+\frac{z^2 \times \hat{p}(1-\hat{p})}{\varepsilon^2 N}}$	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	where z is the z score ε is the margin of error N is the population size p̂ is the population proportion In this: z=1.96 (for confidence of 95%) ε=0.05 N=100 p=0.364 n= $(1.96^2 \times 0.364(1-0.364))/0.05^2$ = (3.8416 x 0.364 x 0.636)/0.0025 = 0.8893 /0.0025 =355.7383 n'= 355.7383/ (1+$(1.96^2$ x 0.364(1-0.364))/$(0.005^2$ x 100)) = 355.7383/ (1+(3.8416 x 0.364 x 0.636)/(0.0025 x 100) = 355.7383/ (1+ 0.8893/0.25) = 355.7383/ (1+ 3.5572) =355.7383/4.5572 =78.0607 So, sample size = 79
Statistical Analysis section is also very general, not specific to the study.	Data collected will be analyzed using SPSSv23 software. Student t-test will be used to compare two groups' weight, tumor weight, and number of lymph nodes involved, and Mann-Whitney test will be used to compare their cancer types. Comparison of volume of aspirated liquid during follow-up will be performed using Repeat Measure ANOVA. The significant level will be considered as less than 0.05.

15- Clarification of research proposal entitled ***"Evaluation of efficacy of a paste of refined wheat flour and zinc oxide versus coloplast 2650 in skin care for pediatric patients who have undergone ileostomy or colostomy- A non-randomized controlled trial"*** submitted by Dr. Anand Pandey, Professor Junior Grade, Department of Pediatric Surgery, King George's Medical University, U.P., Lucknow vide letter no. 641/PedSy/22 dated 29th August 2022.

Previous EC Comment	Previous EC Decision
The research is worth trying, because we need cost effective treatment modalities for our setups.	• Zinc oxide is a known agent which finds wide application in the cosmetic industry, which prevents and heals burns, is a non-irritant and is a skin healer and soother. Maida is another agent which is quite frequently used in cosmetic products, and is soft and inert. • Oral zinc supplementation may be beneficial in treating zinc-deficient leg ulcer patients. Topical administration of zinc appears to be superior to oral therapy due to its action in reducing superinfections and necrotic material via enhanced local defense systems and collagenolytic activity, and the sustained release of zinc ions that stimulates epithelialization of wounds in normozincemic individuals. Zinc oxide in paste bandages (Unna boot) protects and soothes inflamed peri-ulcer skin. (Ref: Lansdown, A.B.G., Mirastschijski, U., Stubbs, N., Scanlon, E. and Ågren, M.S. (2007), Zinc in wound healing: Theoretical, experimental, and clinical aspects. Wound Repair and Regeneration, 15: 2-16. https://doi.org/10.1111/j.1524-475X.2006.00179.x) • Zinc deficiency has been linked to delayed wound healing and low serum zinc levels have been reported in critically ill patients within Intensive Care Units. The benefits of supplemental zinc have been documented in critically ill patients, severe burn injury, subcutaneous abscess, minor surgery and pressure ulcers. The role zinc plays in wound healing can be viewed from two perspectives: first, the impact of zinc deficiency and second, the effect of zinc supplementation (topical/local or systemic) on wound repair. Treating zinc deficiency results in improved wound healing compared to those with zinc deficiency. For example, in patients considered to be at risk of refeeding syndrome, it may be appropriate to give a leading dose of 10-30 mg of Zn, followed by the daily maintenance dose of 2.5-5 mg. However, the impact of zinc supplementation on wound healing in patients without zine deficiency is less well known. There are very few well-done clinical studies on the topic and what little information currently available is inconsistent. For example, the Cochrane database reports 6 small studies on patients with arterial or Venous ulcers and found that oral zinc supplementation did not improve wound

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

			healing. Contrarily, another meta-analysis of topical zine therapy with zinc oxide paste-medicated dressing containing zinc concentration between 6-19% for chronic venous leg ulcers showed improved healing, though the authors point out that the studies were small and of sub-optimal quality Cereda and co-authors performed a randomized, prospective trial in malnourished patients with chronic pressure ulcers. They found a significant reduction in the size of the ulcers after 12 weeks of supplementation with a high calorie, high protein oral formula that was also supplemented with arginine, anti-oxidants and zinc (either orally or tube fed with 18-20 mg zinc daily). It is unknown how significant of a role the zinc supplementation played in this study. Attia and colleagues reported on 90 non-diabetic patients with uncomplicated wounds who were topically treated with one of two zine-containing fluids (regular crystalline insulin or aqueous zinc chloride solutions at 0.2 mg/100 ml. per 10 cm^3 wound) versus a control of 0.9% normal saline. The groups treated with the zinc-containing fluids had significantly improved healing. On the other hand, a study of 42 patients with pressure ulcers treated with oral L-camosine versus zinc containing polaprezine (at 34 mg per day) showed no difference in healing. It is clear that more studies utilizing more stringent controls will be necessary to fully understand the clinical potential of zinc supplementation. Due to the loss of zinc during injury, zine therapy has been used in wound care to enhance healing in zinc-deficient patients. Topical zinc sulphate (ZnSO4) application, usually at an optimal 3% concentration, has been widely used in wound healing for its antioxidant effect. Other forms of application include 1% ZnCl2 or the largely insoluble zinc oxide (ZnO) ZnO provides prolonged supply of zinc to wounds and enhance its healing ability. Additionally, ZnO increases collagen degradation in necrotic wounds. It has been shown that topical zinc application induces mRNA expression of metallothionein, which could account for its anti-UV photoprotective effect. A standard regimen for severe burn care includes regular daily dietary zinc supplementation equivalent or exceeding 22 mg. Moreover, recent advances in drug delivery with zinc oxide nanoparticle (ZnO-NPs) technology has received considerable attention for the treatment of wounds due to their effective cell penetration, immunomodulation and antimicrobial capacity. However, in-depth pharmacodynamics and toxicology studies are still needed prior to widespread applications. (Ref: Lin P-H, Sermersheim M, Li H, Lee PHU, Steinberg SM, Ma J. Zinc in Wound Healing Modulation. Nutrients. 2018; 10(1):16. https://doi.org/10.3390/nu10010016) • A combination of chitosan, polyvinyl alcohol (PVA) and Zinc oxide (ZnO) could be an effective option for faster healing of diabetic wounds due to the wound healing activities of chitosan-

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		PVA nanofibers and antibacterial properties of ZnO. The results revealed that chitosan/PVA/ZnO nanofibrous membranes possessed higher antibacterial potential against E. coli, P. aeruginosa, B. subtilis and S. aureus compared to chitosan/PVA nanofibrous membranes. Moreover, chitosan/PVA/ZnO nanofibrous membranes exhibited higher antioxidant potential compared to chitosan/PVA nanofibrous mats. The in vivo wound healing studies showed that chitosan/PVA/ZnO nanofibrous membranes resulted in accelerated wound healing as compared to chitosan/PVA nanofibers. The current study, revealed that chitosan/PVA/ZnO electrospun scaffolds could be effectively helpful in dressings for diabetic wounds. (Ref: Rashid Ahmed, Muhammad Tariq, Imran Ali, Rehana Asghar, P. Noorunnisa Khanam, Robin Augustine, Anwarul Hasan. Novel electrospun chitosan/polyvinyl alcohol/zinc oxide nanofibrous mats with antibacterial and antioxidant properties for diabetic wound healing. International Journal of Biological Macromolecules. 120(A);2018:385-393. https://doi.org/10.1016/j.ijbiomac.2018.08.057) There is significant biomedical potential of the effect of whole wheat flour solution as antioxidant wound coating for enhanced wound healing. The results show that the low concentration of whole wheat flour solutions have good biocompatibility and can scavenge radical and intracellular ROS in vitro, accelerating tissue remodeling in vivo to promote wound healing. This kind of whole wheat flour solution has great potential application for cutaneous wound repair. (Ref: Caihong Xian, Zhipeng Gu, Guiting Liu, Jun Wu. Whole wheat flour coating with antioxidant property accelerates tissue remodeling for enhanced wound healing. Chinese Chemical Letters. 31(6);2020:1612-1615.https://doi.org/10.1016/j.cclet.2019.09.011)
	Please provide adequate evidence to support success of application of Maida and ZnO combination, may be at any other area.	If the combination doesn't work, the patients will be then prescribed the expensive but proven treatment option Coloplast 2650. Although, no adverse effects are expected to happen due to the use of Maida and ZnO.
	If the combination does not work as expected, what would be the consequences?	We will do it as a pilot study, with 30 patients in each group.
	Sample size calculation must be given according to the known prevalence of cases of ILEOSTOMY or colostomy. Can be done as pilot study (30 in each group)	We will do it as a pilot study, with 30 patients in each group.
	Define outcome measures and include	**Wound Evaluation and Outcome Measurement:** Wound evaluation will

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	microbiological out comes.	include an examination and recording of wound characteristics, including wound size, as well as the results from microbiological wound culturing and standard wound imaging. We will apply transparent film dressing to the wound bed and outline the wound margin. The photographs of the films will be used to estimate the wound size d. At1 week, 1 month, 3 months and 6 months follow-up, percentage of wound size reduction will be calculated by the following formula: (baseline wound size- follow-up wound size)/baseline wound size × 100 (%). Wound healing is defined as complete epithelization of the wound by inspection. Wound evaluation and wound-healing outcomes will be examined and recorded at each visit. The skin complications will be graded as follows (to assess skin lesions, devised by Xavier ACM et al : Component / Score Active Excoriation / 0 to 10 Crust/ Bleeding / 0 to 10 Exulceration / 0 to 10 Linear Lesions / 0 to 10 Total Score / 0 to 40 Microbiological outcome measurement will not be a part of this study; rather it can be planned as a separate study. We also believe that not analyzing the microbiological outcome will make any difference to our study, as our goal is to study the excoriation due to the alkaline content of the gut, and not due to the microbiological flora of the gut, leading to the infection, which is actually secondary to the topic under discussion. Moreover, budget constraints are also binding to further expansion of the study.

Section 3: Conflicting statements: If drug is approval for marketing worldwide, how come it's a IND/ND?	Ref. to annexure point 3 (ii)
DCGI approval not Attached	DCGI approval letter attached
Why use direct identifiers?	Ref. to annexure point 6
Section 7: Conflicting statements on biological material. Clearance letter to transport sample out of India not attached.	The approval for conduct of Clinical Trial released by CDSCO is sufficient for transportation of biological samples outside India. Please find enclosed Gazette notification No. 19 /2015-2020 S.O. 2612 (E) released by Directorate General of Foreign Trade dated 04.08.2016 for your perusal. We would like to quote the related regulation for your ready reference, "The import of human biological samples by the Indian diagnostic laboratories / Indian Clinical Research Centres for lab analysis / R & D testing or export of these materials to foreign laboratories should be permitted by Customs authorities at the port of entry / exit without prior approvals (import license / export permit) from any other Government agency." The study in reference is approved by CDSCO and will be conducted in compliance with laws and regulations applicable in

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		India. As a process followed for all ongoing Clinical Trial an undertaking has to be submitted stating that we will follow all applicable procedures for safe transportation and disposal of biological samples. The Customs allow the transport of biological samples with the undertaking and CDSCO study approval is enclosed along with the undertaking. In addition to Gazette notification we are enclosing Annexure-A which is submitted to DCGI during online Regulatory application, it includes the justification for sample number & volume that will be exported to central laboratory. We would like to assure that the study will be conducted in compliance with laws and regulations applicable in India. Export NOC that was submitted to DCGI along with initial application for LIB006 study is attached herewith. The same was approved by DCGI on 11Nov2021 providing CT – NOC approval for study.
	Section 10: (ii) Is wrong.	Ref. to annexure point 10 (ii) No Risk.

The reply of the PI to the above Comments was forwarded to the PR:-
Recommendation of PR:

- Reply to queries must be addressed directly, at least briefly, rather than redirecting to Annexure.
- Now that it is accepted that biological material is being transported, Section 7 (ii) is incorrectly filled.
- The Gazette Notification explicitly mentions "COMMERCIAL USE'. Is this a commercial activity or a research activity?
- There is no intervention which carries no discomfort.
- Again, IEC should make a clear policy statement on sending tissues out of the Country.

EC Comment:

- Transport of biological material out of the country will be after taking approval of competent National authorities.

EC Decision: Approval is subject to modification and fulfillment of administrative formalities.

33- Research proposal entitled ***"Assessment of treatment outcomes for sebaceous cell carcinoma eyelid"*** submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/1456/22 dated 30th August, 2022.

Previous EC Comment	PI response
1. Proper Research hypothesis should be defined after identifying the study variables and population parameters involved	This is an observational study on patients who have been already operated. We will study the treatment outcomes of our patients. Therefore, this study is not testing any hypothesis. The study variable and population parameters are described in the Case report form.
2.Study design is not clear. It says: single center, observation, retrospective case series study	We have used observational study design. There is no comparison group so it will be a descriptive study. It has retrospective time frame. Only patients from Surgical Oncology, KGMU will be studied.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	3: Sample size calculation is missing	This is a retrospective observational study, therefore formal sample size calculation was not done. The 30 patients which will be included in the study (from January 2017 to January 2022) are those which were treated in our department already.
	4: Statistical method section is very general, not specific to the study.	The descriptive statistic will be used to describe the data. Chi-square test will be used to see the association of categorical variables and t-test will be used for quantitative variables wherever necessary. Kaplan Meir statistics will be used to plot the survival curves.

The reply of the PI to the above Comments was forwarded to the PR:-
Recommendation of PR: Provisionally Approved

34- Research proposal entitled ***"Assessment of treatment outcomes for carcinoma vulva"*** submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/1455/22 dated 30th August, 2022.

Previous EC Comment	PI response
1.The status of vulnerable subjects need to be clarified	We apologize for the information which was missed previously submitted annexure 1. This has been clarified in the revised annexure 1 (point 5.VI)
2: What is the rationale of sample size of 65?	Proposed sample size of 65 is based upon the number of patients treated in the study period which is from January 2017 to January 2022.
3: This is labeled as a retrospective data analysis of 65 patients treated between 2017-2022 and requires estimation of survival (disease free and overall). Hence a Prospective arm of follow-up for 3-5 year need to be undertaken and patient examined for disease free status. Hence ethical approval may need a consent process to be incorporated as well.	The 65 patients which will be included in the study (from January 2017 to January 2022) are in the retrospective time frame. The analysis will be performed based upon the last follow up status as available in the departmental medical record till July 2022. This will make follow up ranging from 6 months to 65 months. And this will be sufficient for analyzing survival outcome of cancer patients. Our study has only retrospective arm (whatever follow up data available till July 2022) and there is no prospective collection of data. Therefore, we

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)

2-	ADE **(Hospitalization)** research protocol no. EGC002 entitled ***"A phase III, Randomized, multicenter, double-blind study to compare efficacy and safety of EG12014 (EirGenix-Trastuzumab) with Herceptin® as Neoadjuvant treatment in combination with anthracycline/Paclitaxel-based systemic therapy in patients with HER2-positive early breast cancer"*** sponsored by M/s Sun Pharma Laboratories Ltd. submitted by Prof. Anand Kumar Mishra, Department of Endocrine Surgery, K.G's Medical University, U.P., Lucknow vide letter no. ES/057/22 dated 7th September, 2022. **Patient ID: 910406** **Previous EC Comment:** • Please provide a follow-up report ***The reply of the PI to the above Comments was forwarded to the PR:-*** The SAE (Hospitalization) is possibly related to Investigational Product (EG 12014, Transuzumab or Herceptin as I.V. bolus every 3 weeks) or other Drug used in Cycle (Cyclophosphamide) for treating early breast cancer as told by PI in his initial and final reports. Subject developed severe abdominal pain for which she was hospitalized (SAE) on 25-10-2019 and given appropriate treatment and was discharged in stable condition on 27-10-2019 .Whether this SAE occurred due to intervention or not, has not been confirmed by doing any causality assessment test (e.g. Challenge and De-challenge test) and secondly almost one month has elapsed after getting Cycle 1 of interventional drugs (given on 25-09-2019) and occurrence of SAE. Causal relationship of SAE and drugs given (interventional and other drugs administered through Cycles as chemotherapy) cannot be established and moreover, patient at the time of event was given proper treatment and was discharged in stable condition, **therefore compensation may not be required in this SAE.** **(As this is an old SAE reported on 25th October, 2019 and details of ongoing Cycles to be given and follow-up reports are not available, therefore it is difficult to correlate the further events.)** **EC Decision**: Compensation may not be required in this SAE. ***Ref. code: 92nd ECM IIC/P3***

IC	Brought forward from 117th ECM held on 30th July, 2022
	Action taken
1-	Clarification of research proposal entitled "***Randomized controlled trial to assess the feasibility of delivering psycho-social interventions and effectiveness in improving the common psychological problems of the non-clinical population: a multi-centric and multi-setting study from central India***" submitted by Dr. Amit Singh, Assistant Professor, Department of Psychiatry, King George's Medical University, U.P., Lucknow vide letter no. 817/Psy/22 dated 16th June, 2022.

Previous EC Comment:	**PI response**
Calculation of sample size is not clear. It is mentioned that in total 173 cases will be recruited and in each group there will be 43 subjects. Why?	The estimated minimum sample size for the study is 170. Thus, in each of the 4 study settings (two general hospital settings and two community setting) around 43 participants will be required. Considering them to be divided equally into intervention arm and control arm we have proposed to recruit 22 participants in each arm.
In the setting of the study section it is mentioned that subjects will be recruited from Bhopal too. Which institution and who will be the Co-PI from there is not mentioned.	The details of the institution and Co-PI from Bhopal site are as follows:- **Name of the Institution:** All India Institute of Medical Sciences, Bhopal, Madhya Pradesh. **PI (Bhopal Site):** Dr. Snehil Gupta Assistant Professor, Department of Psychiatry, all India Institute of Medical Sciences, Bhopal (CV of the PI was submitted along with the study proposal)

The reply of the PI to the above Comments was forwarded to the PR:-
Second recommendation of PR:

- Kindly provide the consent of Dr. Snehil Gupta.
- Kindly provide the ethical clearance of AIIMS, Bhopal.

The reply of the PI to the above Comments was forwarded to the PR:-
Recommendation of PR: Pending

Previous EC Decision:

- Defer for the next Meeting because Primary reviewer was absent.

EC Decision: Approved

Ref. code: 116th ECM IIA/P28

2-	Expedited review of research proposal entitled ***"Evaluation of the urinary and serum biomarkers for acute kidney injury in patients admitted to the intensive care unit at the tertiary care centre"*** submitted by Dr. M.L. Patel, Professor,(Jr. Grade), Department of Medicine, K.G's Medical University, U.P., Lucknow vide letter no.1389/MED/2022

	EC Comment: • As above **EC Decision:** Approval subject to modification with a tabular format. ***Ref. code: 118th ECM IIA/P19***
20.	Research proposal entitled ***"Delineate molecular mechanism in development of chemo-resistance in non-Hodgkin's lymphoma"*** sponsored by Regional Centre for Biotechnology submitted by Prof. Seema Gupta, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 899/RT/2022 dated 24th August, 2022. ***Recommendation of Primary reviewer:*** Many facts need to be justified • The duration of study is three years in annexure 1 while in methodology section it is five years extendable for two more years. According to CDRI approval it is for one year- why this confusion? • In annexure 1 a. While "collection for banking future research' clause states "NO", the investigator further states that consent for future use of material biological will be obtained- Why this confusion? b. Information sheet needs to be attached both for patients and controls (which is missing) c. While data monitoring states that there is no plan for reporting adverse events, the IEC approval of CDRI states that the investigator should report serious adverse events within 24 hours- kindly clarify period. • Regarding the names of investigators: a. Kindly clarify/ rectify if they are collaborators or guides/ co-guides? b. Dr Sanjeev Kumar and Dr Sunil Kumar will perform surgery: Kindly clarify if Biopsy alone will be done or some other surgical procedure. c. Since immuno-histochemistry needs to be done it will be more appropriate to add a pathologist as a part of team. • The title pertains to non-Hodgkin's lymphoma while introduction, review and study. • Population focuses on mantle cell lymphoma (MCL). Kindly clarify if only MCL is the focus of study or non-Hodgkin's lymphoma as whole as reflected in inclusion criteria. In latter case the relevant review needs to be incorporated as well. • The aim states that pathways will be targeted. Is the word target reflects just identification or something more period. • Kindly justify sample size calculation. • Add consent form for Controls.

(Shally Awasthi)
Member-Secretary, IEC

4- Clarification of research proposal entitled ***"Comparative evaluation of the nasal cavity and pharyngeal airways in cleft LIP and palate individuals with normal subjects- A cone beam computed tomography study"*** submitted by Dr. Mehak Dobhal, JRII, Department of Orthodontics and Dentofacial Orthopaedics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 890/22 dated 16th August, 2022.

Previous PGTSC Comment	PI response
Aims and objectives are stated in two different statements. These statements should be combined to make it "comparative study".	To evaluate Nasal cavity and Pharyngeal airway spaces in patients affected by Cleft lip and palate and compare them with normal subjects.
Research hypothesis is missing.	**RESEARCH HYPOTHESIS:** The purpose of this study is to evaluate Nasal cavity and Pharyngeal airway spaces in patients with cleft lip and Palate and compare them with

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		Normal subjects. To study if there exists a difference in Nasal cavity and Pharyngeal airway spaces between unilateral ,bilateral Cleft patients and Normal subjects Since cleft Lip and Palate patients have a compromised Airway and Nasal Cavity and most commonly require Maxillary expansion and orthognathic Surgeries which might affect the airways and thus causing changes in breathing so a prior assessment of Nasal Cavity and Pharyngeal Airways might eventually be helpful in selection of best treatment option for patient .
	The variables and parameters should be explicitly identified for the study.	Depicted in Flow chart.
	Research hypothesis should be stated in terms of the parameters of the study.	3Vertical,6 linear, 3 volumetric and 3 cross-sectional parameters will be used for pharyngeal airway analysis. 1. **Hn [Nasopharyx height]** 2. **Hp [Palatopharyx height]** 3. **Hg [Glossopharynx height]** 4. **Ln [Length along PNS plane]** 5. **Wn [Width along PNS plane]** 6. **CSAn [Cross-sectional area along PNS plane]** 7. **Lp [Length along U plane]** 8. **Wp [Width along U plane]** 9. **CSAp [Cross-sectional area along U plane]** 10. **Lg [Length alone Ep plane]** 11. **Wg [Width along Ep plane]** 12. **CSAg [Cross-sectioal area along Ep plane]** 13. **Vn [Volume of Nasopharynx]- (Wang 2014)**

(Shally Awasthi)

		14. Vp [Volume of Palatopharynx]- (Wang 2014) 15. Vg [Volume of Glossopharyx]-(Wang 2014)
	The statistical analysis section is missing.	The final sample size calculated to be , n = 75 The mean, standard deviation and P value of each parameter will be calculated for different groups. The data will be collected, tabulated, and statistically analyzed using different test used in statistic science. The obtained data will be subjected to statistical evaluation. Any deviation, if required from the above mentioned method will be done in the best interest of the study.

Recommendation of Primary reviewer: Approved
PGTSC Decision: Approval ratified

Ref. code: X-PGTSC-IIA/P6

5- Clarification of research proposal entitled ***"Evaluation of hypo-fractionated radiotherapy versus conventionally fractionated radiotherapy for the adjuvant management of resected Head and Neck squamous cell cancers"*** submitted by Dr. Aman Verma, JRI, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 828/RT/22 dated 5th August, 2022.

Previous PGTSC Comment	PI response
Aims & objectives section is not clear. It has the definition of primary and secondary end points, which should be in methodology section.	1. To analyze the safety of the hypo-fractionated adjuvant radiotherapy regimen (50 Gy in 20 fractions 5 fractions per week, total time 4 weeks)compared with conventional adjuvant radiotherapy regimen (60 Gy in 30 fractions 5 fractions per week, total time 6 weeks). 2. Patients from low- and middle-income countries (LMIC) have limited resources for Radiotherapy and face long waiting times to be treated . Consequently, in addition to the radiobiological and clinical benefits of accelerated Radiotherapy, hypofractionation regimes can also be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		an important strategy to shorten treatment times and thus improve access to Radiotherapy. 3. Additionally, a short Radiotherapy schedule (4 weeks vs 6 weeks) is associated with better patient compliance.
	The variables and parameters should be explicitly identified for the study. Research hypothesis should be stated in terms of the parameters of the study.	Primary end point-Acute toxicity Secondary end point – progression free survival, overall survival and quality of life
	In the absence of proper research hypothesis, the sample size calculation has no meaning.	As the research hypothesis properly conveyed this time so sample size calculation attached separately (methods section)
	The statistical analysis section is missing	Statistical Analysis will be done using SPSS software 22nd version, with considering the P- value to be significant below 0.05.

Previous PGTSC Comment	PI response
Study design not	mentioned in protocol
No. of Co-Pis are 4	(including HOD) from
Please give details of Clinical parameters to be seen- 1. Gingival pigmentation index – how will you assess 2. How pts. satisfaction analysis will be assessed- If any structured questionnaire are there then attach the	□ Gingival Pigmentation Index by Kumar et al., 2012,It will be recorded by the principal investigator at baseline, 1 month follow up and 6 months follow up. It is based on the visual appearance of the patient's gingiva. Only routine dental diagnostic instruments, that is mouth mirrors will be used to retract the lips of the patient to visualize the gingiva. The distribution of hyperpigmentation, will be assessed in the regions of labial gingiva corresponding to maxillary and mandibular incisors and canines (aesthetic zone). Based on the observations, an individual index score will be assigned to the

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	same	patient by the principal investigator as follows: Score 0: Absence of pigmentation Score 1: Spots of brown to black colour or pigments. Score 2: Brown to black patches but not diffuse pigmentation Score 3: Diffuse brown to black pigmentation, marginal, and attached Reference: Kumar S, Bhat SG, Bhat MK. Development in techniques for gingival depigmentation-An update. Indian J Dent.2012;3:213–21 □ Patient Satisfaction Analysis (by Visual Analogue Scale) It will be done by providing the patients a printed 10 cm long line Visual Analogue scale (VAS), with the words "Not satisfied" (0% satisfaction) anchored to the extreme left and the word "Satisfied" (100% satisfaction) anchored to the extreme right. Each patient will be asked to make a handwritten mark on the line, in order to reflect how satisfied he/she is by the treatment provided. Each centimetre measured on the line

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

		starting from the extreme left and up to the extreme right will denote 10% satisfaction. For example, a mark made by the patient which lies 2cm away from the extreme left of the line will denote 20% satisfaction. A prototype of VAS to be used: Reference: Voutilainen A, Pitkäaho T, Kvist T, Vehviläinen-Julkunen K. How to ask about patient satisfaction? The visual analogue scale is less vulnerable to confounding factors and ceiling effect than a symmetric Likert scale. J Adv Nurs. 2016 Apr;72(4):946-57.

2-	Research proposal entitled ***"An explorative study of cognitive deficits, sleep disturbance, quality of life and activity of daily living in patients with mild cognitive impairment"*** submitted by Ms. Hansita Yadav, MBBS under the guidance of Dr. Pooja Mahour, Additional Professor, Department of Psychiatry, King George's Medical University, U.P., Lucknow vide letter no. 1122/Psy dated 8th August, 2022. ***The above proposal was forwarded to two reviewers.*** ***Recommendation of both reviewers:*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: XII-PGTSC-I B /P2***
IIA	**New Thesis-Resident**
1.	Research proposal entitled ***"Efficacy of nasolabial flap in post mucor infrastructure maxillectomy defects"*** submitted by Dr. Ravi Katrolia, SR, Department of Oral & Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 577/OMSD/22 dated 6th July, 2022. ***Recommendation of Primary reviewer:*** • This is a before and after treatment study. • Study variables and parameters should be properly defined for the study. • Research hypothesis should be formulated in terms of the parameters. • Sample size calculation is required. • Statistical analysis section is required. **PGTSC Comment:** As above **PGTSC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P1***
2.	Research proposal entitled ***"Clinical & biochemical evaluation of herbal preparation in early stages of sub mucous fibrosis- A randomized control trial"*** submitted by Dr. Richa, JRII, Department of Oral & Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 584/OMSD/22 dated 7th July, 2022. ***Recommendation of Primary reviewer:*** • There is no proposal attached. • Only "Undertaking by investigator" and "consent forms" are attached. • There is an external member" Vaidya Abhaiy Narayan Tiwari". • What is his role? Is any kind of permission required for his inclusion. • Is this for approval of "Thesis topic" only? **PGTSC Comment:**

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	As above **PGTSC Decision:** Re-submit with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P2***
3.	Research proposal entitled ***"Modified baumann's angle: A comparative study between dominant and non-dominant upper limb in paediatric age group attending KGMU"*** submitted by Dr. Mohammad Zohaib Abbas, JRI, Department of Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no. 202/Ortho/22 dated 10th June, 2022. ***Recommendation of Primary reviewer:*** • This is a prospective cohort study, not "cross sectional study". • This is a comparative study. The two groups, under comparison" should be exclusively identified. • Research hypothesis should be formulated after properly identifying study variables and parameters. • Sample size calculation is arbitrary. It should be appropriate to the research hypothesis. • Statistical analysis section is also very general. It should be in accordance with the research hypothesis. **PGTSC Comment:** As above **PGTSC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P3***
4.	Research proposal entitled ***"Epidemiological assessment of acetabular fracture in trauma center, King Georges Medical University, Lucknow"*** submitted by Dr. Faisal Ahmad, JRI, Department of Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no. 204/Ortho/22 dated 10th June, 2022. ***Recommendation of Primary reviewer:*** • Study design mentioned is "retrospective and prospective". • It should be one of these. Here, it seems to be prospective study. • There are too many objectives. • One primary objective should be identified. Research hypothesis should be formulated for this objective in terms of properly identified parameters of the study. • Other objectives could be the side products of main hypothesis. • Sample size calculation is inadequate. It should be specific to the research hypothesis. • Statistical analysis section is very general. It should be specific to the research hypothesis. **PGTSC Comment:**

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

	As above **PGTSC Decision:** Modify and re-submit with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P4***
5.	Research proposal entitled ***"Development and validation of age estimation formula based on OLZE's methodin North Indian population using orthopantograms and CBCTs"*** submitted by Dr. Ayushi Jain, JRI, Department of Oral Pathology & Microbiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 813/OP/22 dated 20th July, 2022. ***Recommendation of Primary reviewer:*** Approved **PGTSC Decision:** As above ***Ref. code: XII-PGTSC-IIA/P5***
6.	Research proposal entitled ***"Immunohistochemical expression of minichromosome maintenance complex 3 (MCM3) and transport and GOLGI organization protein 1 (TANGO1) in different grades of oral squamous cell carcinoma"*** submitted by Dr. Saloni Verma, JRI, Department of Oral Pathology & Microbiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 815/OP/22 dated 21st July, 2022. ***Recommendation of Primary reviewer:*** Approved **PGTSC Decision:** As above ***Ref. code: XII-PGTSC-IIA/P6***
7.	Research proposal entitled ***"Myofibroblast expression in oral squamous cell carcinoma and oral potentially malignant disorders using H1 calponin and integrin α II; A comparative study"*** submitted by Dr. Roshna Sankar N S, JRI, Department of Oral Pathology & Microbiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 812/OP/22 dated 20th July, 2022. ***Recommendation of Primary reviewer:*** Approved **PGTSC Decision:** As above ***Ref. code: XII-PGTSC-IIA/P7***
8.	Research proposal entitled ***"Exploration of three proteins panel to predict prognosis in oral squamous cell carcinoma"*** submitted by Dr. Priya Devi, JRI, Department of Oral Pathology & Microbiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 811/OP/22 dated 20th July, 2022. ***Recommendation of Primary reviewer:*** Approved **PGTSC Decision:** As above ***Ref. code: XII-PGTSC-IIA/P8***

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman

9.	Research proposal entitled ***"Anatomical variation of posterior tibial slope in North Indian population: A Hospital based study"*** submitted by Dr. Anmol Chaurasia, JRI, Department of Orthopaedics, King George's Medical University, U.P., Lucknow vide letter no. 210/Orth/22 dated 10th June, 2022. ***Recommendation of Primary reviewer:*** • Sample size is mentioned 200 in the IEC form and 100 in the synopsis. • Drs Devarshi and Ravindra Mohan are Co-PIs as well as part of Scientific Review Committee. This is conflict of interest. • No Co-PI from department of Radiology has been taken when the study is mainly on radiographs. **PGTSC Comment:** As above **PGTSC Decision:** Approval after modification with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P9***
10.	Research proposal entitled ***"Comparative analysis of TNF-α and THF-β in serum and saliva of oral lichen planus patients"*** submitted by Dr. Rajlaxmi Mitra, JRI, Department of Oral Medicine & Radiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 394/OM&R/22 dated 26th July, 2022. ***Recommendation of Primary reviewer:*** • There are 6 Co-PIs of which 5 are from the same department. Please justify those rules. • Sample size in mentioned as 25 at one place and 39 at another. • Two aims of the study are given which are identical • Control group consists of healthy individuals but no mention has been made of using volunteers for the study • Who will bear the cost of blood biochemistry examination for TGF? **PGTSC Comment:** As above **PGTSC Decision:** Approval after modification with tabular format in word file. ***Ref. code: XII-PGTSC-IIA/P10***
11.	Research proposal entitled ***"Evaluating the efficacy of intralesional autologous platelet rich plasma (PRP) therapy in patients with oral lichen planus"*** submitted by Dr. Praveen. S, JRI, Department of Oral Medicine & Radiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 395/OM&R/22 dated 26th July, 2022. ***Recommendation of Primary reviewer:*** • There are six Co-PIs in the study of which 5 are from the same department. Please justify those rules. • The calculated sample size is 39 for statistical significance. However, the PI is splitting this into two groups which decreases the sample size in each group. I will suggest that the sample size of 39 be maintained in each group for the study to be

(Shally Awasthi)

Minutes of 119th ECM held on 22nd October, 2022

(Registration No.: ECR/262/Inst/UP/2013/RR-19)

Minutes of 119th Institutional Ethics Committee Meeting virtually held on **22nd October, 2022** from 10.30 A.M.

The following Members were present in the Meeting:-

1. Dr. Alok Dhawan -Chairman
2. Dr. G.G. Agarwal -Member
3. Mrs. Akansha Dubey -Member
4. Mrs. Vasundhara Kumari -Member
5. Mr. Ujjawal Krishna -Member
6. Dr. Akash Agarwal -Member
7. Dr. K.K. Yadav -Member
8. Dr. Rajendra Nath -Member
9. Dr. A.A. Mahdi -Member
10. Dr. Anupam Mishra -Member
11. Dr. D.N. Upadhyaya -Member
12. Dr. Shally Awasthi -Member-Secretary, IEC

The following Members were not present in the Meeting:-

1. Dr. Shubha R. Phadke -She has given her written comment
2. Dr. Anita Rani -She has given her written comment

IA	Action Taken
1-	Clarification of research proposal entitled "***Missed injury associated with maxillofacial trauma: An observational study***" submitted by Dr. Arunesh Kumar Tiwari, Associate Professor, Department of Oral and Maxillofacial Surgery, FODS, King George's Medical University, U.P., Lucknow vide letter no.762/OMSD/2021 dated 9th September, 2022. **Previous EC Comment:** • The protocol appears to be a part of the manuscript prepared for publication. Kindly

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

resend the proposal in a proper format.

- Apply as the fresh proposal for a waiver

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR: Approved
EC Decision: As above

Ref. code: 111th ECM IIA/P14

2- Clarification of research proposal entitled "***Identification and characterization of novel molecular biomarkers with prospects of targeted drug therapy development in pediatric B-Cell acute lymphoblastic leukemia (ALL) with diverse genetic subgroups***" submitted by Dr. Nishant Verma, Additional Professor, Department of Pediatrics, King George's Medical University, U.P., Lucknow vide letter no.2551/Ped/22 dated 13th October, 2022.

Previous EC Comment	PI response
1.Summary mentions : No funding. However patient information sheet mentions: funding will be applied from Govt organizations or NGOs.	The funding will be applied to Govt organizations, NGOs and intramural fund from IIT Hyderabad. The application for the same is in process. There will be no financial implications for the patient or for KGMU, Lucknow.
2.Study setting: Other participating institutions.... which are these?	The samples would be obtained from KGMU Lucknow and processed at IIT Hyderabad.
3.Study design: multicentric: which all	The samples would be obtained from KGMU Lucknow and processed at IIT Hyderabad
4.Sample size: last sentence: to achieve statistical significance.... What and how, which test?	As there are no data available on genomic and transcriptomic profile of Indian Pediatric B lymphoblastic leukemia patients, we will be conducting this study as a 'Pilot' project. We will follow the convenience sampling (non-probability sampling) method, wherein 100 consecutive children satisfying the inclusion and exclusion criteria will be enrolled. In the paediatric B cell ALL, 70 to 75% of the cases can be classified as per the WHO. classification of tumors of hematopoietic and lymphoid tissue, while 25 to 30% remain unclassified and constitute the novel subgroup. The subgroups are heterogeneous, with most common subgroup accounting for not more than 15% of B cell ALL cases as per the available literature. With our initial study with 100 cases, we expect to pick up the common subgroups. We should also be able to pick up novel subgroups as well, though it is 5 Outcome measures: Do you think this sample size is good enough to identity subgroups with in this mixed bag and also find actionable solutions, despite the fact that WHO has been unable to do so, with possibly much
5.Outcome measures: Do you think this sample size is good enough to identity subgroups with in this mixed bag and also find actionable solutions, despite the fact that WHO has been unable to do so, with possibly much larger sample size and genetic data etc?	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		larger sample size and genetic data etc? possible that the novel subgroups with low incidence might be missed. However, we envision to be able to generate RNA and DNA profiling data for Indian B-ALL patients.
	6. Statistical analysis Statistical analysis 7.categorical data in 2 groups: which two groups 8. continuous data in 2 groups: which two groups 9. Means between more than 2 sub groups: specify groups.	For statistical analysis, SPSS software Version 22 will be used. Case related data will be entered in the Microsoft Excel Sheet. Incidence of various sub groups thus identified would be calculated as a percentage. Normally distributed data would be summarised by using mean and standard deviation and data which are not normally distributed would be summarised by median and interquartile range. Analysis of RNA-seq data obtained from patients to identify various differentially expressed genes between the B ALL patients and normal population will be performed. RNA-seq analysis methods have been classified into four categories based on the type of statistical methods used for differential analysis: (i) t-test analogical methods (Cuffdiff and Cuffdiff2), (ii) Poisson or negative binomial model-based methods (edgeR, DESeq, DESeq2, baySeq, EBSeq), (iii) non- parametric methods (SAMseq and NOIseq), and (iv) linear models (voom and sleuth). All the above methods will be applied on the obtained datasets to obtain statistically relevant results. Categorical variables like gender or age predilections of subgroups would be compared using the Chi-square test.
	Ethical consideration: delinked?? Really?	Samples would be collected from patients voluntarily enrolling for the study, post approval of the proposal by the ethical committee of KGMU. Informed written consent would be obtained from the patient and patients confidentiality would be maintained. As the study is purely observational in nature, there is no risk to the patient due to this study.
	Transcriptomic and genomic data analysis needs specialized tests.	Transcriptome and genome will be analyzed using simple PCR and FISH based approach as well as by using high throughput technologies NGS.
	Flowchart: what is yellow painted testing?	The information presented in the flowchart has now been incorporated in the proposal text. The yellow colored part of the flowchart submitted earlier represented the tests that are routinely done as a part of workup in a case of B cell ALL, indicating that the the cost would be borne by the patient.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Dr. Anurag Gupta: He appears to be a student. Can he be co- investigator? He can be student investigator.	Dr. Anurag is MD in Pathology with more than a decade of experience in cytogenetics and molecular hematopathology. As his interest lies in molecular genetics of haematolymphoid neoplasm, he was an integral part of this study since its conceptualization as a part of his PhD. However, as suggested by the ethical committee, his name has been designated as student investigator.
	Who will fund the study?	The study requires analysis of RNA and DNA for achieving the aim, for which the funding will be applied by us to Govt organizations, NGOs and IIT Hyderabad. The application for the same is in process. There will not be any financial implications for the patient nor for KGMU, Lucknow.
	Sponsor information needed.	The study requires analysis of RNA and DNA for achieving the aim, for which the funding will be applied by us to Govt organizations, NGOs and IITH as well. The application for the same is in process. There will not be any financial implications for the patient nor for KGMU, Lucknow.
	Bio banking will be done: who holds	Dept of Biotechnology, Indian Institute of technology, Hyderabad
	Reason for reframing the & #39;Title' of the study	To make the aim more clearer. All cases of B ALL irrespective of the subgroups will being collected for 4 the study. The data thus generated will provide us the details of the differentially expressed genes in B ALL. The data will be interpreted for the presence of any potential marker of significance in B ALL.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR:

- Bio-banking will be done. This has not been mentioned in the Consent form.

EC Comment:

- Where the consent form is also that bio-banking will be kindly follow Institutional I.P.R. policy for out cases of bio banking, if any.

EC Decision: Approval subject to modification

Centaur House, Opp. Grand Hyatt, Vakola, Santacruz-East, Mumbai submitted by Dr. Kushagra Gaurav, Assistant Professor, Department of General Surgery, King George's Medical University, U.P., Lucknow vide letter no. 3259/2022 dated 28th September, 2022.

Previous EC Comment	PI response
No reasoning for Sample size of at least 200 participants given.	This is an Active PMS Study of CDSCO-approved drug i.e. Diperoxochloric Acid [DPOCL] topical solution. In compliance with NDCT Rules, 2019 and the conditions stated in the form 46, active PMS study should be carried out in diabetic foot ulcer patients, hence this trial is planned. Since the purpose of the study is to generate data as part of post- marketing surveillance and such studies are non-comparative, usually sample size estimations are not required. For your record, this trial is planned to be carried out in at least 20 centers in India, with number of DFU patients not less than 200 and not more than 500.
A payment clause is there in point number 19. How much amount and why the payment would be charged is not provided.	There is no payment clause is mentioned in point number 19 in any of the document submitted in dossier of EC submission.
Insurance policy has expired.	We had already submitted the renewed insurance policy on 01/04/2022 vide Insurance Policy No. OG-22-1919-3306-00000039 having period of insurance 15-Mar-2022 To 14-Mar-2023. We are herewith resubmitting the insurance policy (Policy No. OG-22- 1919-3306-00000039) with acknowledgement copy dated 01.04.2022 for your reference [Enclosure 1 is Enclosed].
Duration of the Study is incorrect, Subject participation is not mentioned.	This is an Active PMS Study of CDSCO approved drug i.e. Diperoxochloric Acid [DPOCL] topical solution, therefore DSMB is not applicable. Section 11 of Ethical Clearance Form is modified. Resubmitting Ethical Clearance Form as Annexure 1-RV- 01/2019.

5- Clarification of research proposal entitled ***"Mucormycosis: A comparative study between endoscopic and radiological features"*** submitted by Dr. Manish Chandra, Associate Professor, Department of Otorhinolaryngology & Head & Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no. 607/ENT/MC/22 dated 13th September, 2022.

Previous EC Comment	PI response
Proper research hypothesis should be defined after identifying the study variables and population parameters involved.	Records of all patients diagnosed with mucormycosis between May 2021 and September 2021 will be retrieved and analysed. Details such as age, history of chronic illness, associated co-morbidities will be collected. Radiological findings only on Magnetic Resonance Imaging (MRI) and nasal endoscopic findings will be recorded. A comparison will be made between the above to find out a better and more effective diagnostic tool.
Study design seems to be case-control study	Our study is not a case-control study since all the patients diagnosed with mucormycosis and fulfilling the inclusion and exclusion criteria will be included in the study. All such patients should have undergone radiological and endoscopic investigations. Hence this is a retrospective

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	cohort observational study.
All the fundamentals for case-control study should be clearly outlined.	The study design is not a case-control study. Rather it is a retrospective cohort study.
Sample size calculation and statistical analysis are missing.	The study design of our research proposal is a retrospective observational study and hence all patients fulfilling the inclusion and exclusion criteria will be included in the study. The statistical analysis will be done using SPSS software 22.

6- Clarification of research proposal entitled ***"Evaluation of blood group in patients of congenital malformation"*** submitted by Dr. Piyush Kumar, Assistant Professor, Department of Pediatric Surgery, King George's Medical University, U.P., Lucknow vide letter no. 722/Ped Sy/22 dated 1st October, 2022.

Previous EC Comment	PI response
To include sample size(and its calculation)	Sample Size Estimation: The required sample size for the Study is calculated based on the standard formula for one-point sample estimation: Z 2 1-∞/2 P (1-P) Sample Size= d 2 To ensure coverage of minimum required sample size for estimating various outcome indicators of the study the value of 'P' (congenital anomaly) is taken as 1.7%. With the above assumption the required sample size at 95 percent level of confidence with 2 percent of permissible error in the estimates, is worked out as: n =1.96 2 * 0.017 * 0.983 / 0.02 2 = 160.49 Hence minimum sample size will be161.
ICF to be detailed in a simple way to make the patient understand the contents	Information added- File attached**
Give a brief account of the anticipated statistical analysis	Statistical analysis: The data will be entered in MSExcel, critically analyze and tabulate using SPSS- 28.0 version software. Statistical tests of significance Chi square test will be applied to test and validate the findings of the study. Adjusted and unadjusted odds ratios (OR) and their 95% confidence intervals (Cis) will be used as indicators of the strength of the association. A p-value of 0.05 or less will be used as cut off level for statistical significance.

Previous EC Comment	PI response
Need to have a clear policy statement on sending tissues out of the Country. The rest proposal is acceptable	This is to clarify that The Director General of Foreign Trade (DGFT) has notified that the human biological samples imported into India for commercial purposes should be permitted by the customs authorities without prior approvals from any government agency, therefore it would no longer require import or export licenses for human biological samples. The importer of the human biological samples has to comply with the norms set for the save transfer and disposal of the biological samples. Earlier, the importer had to submit an application to the Indian Council of Medical Research (ICMR) for the import of human biological samples and the ICMR has been advised to set up a committee consisting of experts from relevant fields for deciding each proposal on a case-by-case basis and to furnish their views to the Government for consideration. For this purpose, the DGFT has inserted import and export policy for the transfer of human biological samples for commercial purposes under general notes 17 to schedule 1 import policy of Indian Trade Classification (Harmonised System) [ITC (HS)] 2012 and general notes 4 to schedule - 2 Export policy of ITC (HS) 2012. In the notification the DGFT said that the import of human biological samples by the Indian diagnostic laboratories or Indian clinical research centres for lab analysis or R&D testing or export of these material to foreign laboratories should be permitted by customs authorities at the port of entry or exit without prior approvals from any government agency, provided the concerned Indian company or agency submits an undertaking that they are following and will follow all the applicable rules, regulations and procedures for safe transfer and disposal of the biological samples being imported or exported as per the

15- Clarification of research proposal entitled ***"ICMR MYCONET inpatient clinical registry: establishment of an analytics platform"*** sponsored by ICMR, New Delhi submitted by Prof. Prashant Gupta, Department of Microbiology, King George's Medical University, U.P., Lucknow vide letter no. 958/2022 dated 13th October, 2022.

Previous EC Comment	PI response
The patient information sheet not related to the present research proposal should be revised.	Revised and eCRF attached.
PI ticked the written consent column in the IEC SOP form (HSR WF attached, as it is a data study) – Clarify or resubmit the IEC SOP form.	Written consent is not required as waiver has been asked for. No direct patient contact will be there in the study. ICMR has also provided approval from Central Ethics Committee on Human Research (CECHR) (Copy attached)
ICMR - acceptance letter and Budget not attached.	Add on project under AMDRC ICMR project attached letter and ICMR acceptance letter attached. Therefore, no extra budget is required.

The reply from PI to the above Comments was forwarded to PR:-

EC comment: Approved

EC Decision: As above

Ref. code: 118th ECM IIA/P7

16- Clarification of research proposal entitled ***"Delineate molecular mechanism in development of chemo-resistance in non-Hodgkin's lymphoma"*** sponsored by Regional Centre for Biotechnology submitted by Prof. Seema Gupta, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 1126/RT/2022 dated 15th October, 2022.

Previous EC Comment	PI response
The duration study is three years in annexure 1 while in methodology section it is 5 years Extendable for two more years. According to CDRI approval it is for one year- why this confusion?	Duration of this project according to department of Biotechnology and CSIR- CDRI document is total 5 years (7th August 2019 to 6th August 2024).
In annexure 1 a. While collection for banking future research' clause States NO, the investigator further states that consent for future	a. Collection for banking and future research will be done. b. Attached

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	use of material biological will be obtained- why this confusion? b. Information sheet needs to be attached both for patients and controls (which is missing) c. While data monitoring states that there is no plan for reporting adverse events, the IEC approval of CDRI states that the investigator should report serious adverse events within 24 hours- kindly clarify period.	c. Adverse events have to be reported within 24 hrs in KGMU only. This is not required at CDRI.
	Regarding the names of investigators: a. Kindly clarify/ rectify if the collaborators or guides/ co-guides? b. Dr Sanjeev Kumar and Dr Sunil Kumar will perform surgery: kindly clarify if biopsy alone will be done or some other surgical procedure. c. Since immuno- histochemistry needs to be done more appropriate to add a pathologist as a part of team.	a. Collaborators b. Biopsy alone will be done by Dr Sanjeev Kumar and Dr. Sunil Kumar c. Pathologist has been added (Prof. Rashmi Kushwaha, Pathology Department)
	The title pertains to non-Hodgkin's lymphoma while introduction, review and study population focuses on mantle cell lymphoma (MCL). Kindly clarify if only MCL is the focuses of study or non- Hodgkin's lymphoma as whole as reflected in inclusion criteria. In latter case the relevant review needs to be incorporated as well.	This study will enroll and include only mantle cell lymphoma (MCL).
	The aim states that pathways will be targeted. Is the word target reflects just identification or something more period.	New therapeutic avenues can be added to target these initiating cells specific gene and that would help to overcome development of chemo resistance in MCL Patients. We have mentioned in AIM "I will identify and target the de-regulated pathways associated to cancer stem cells and causing chemo- resistance development Mantle cell lymphoma that the chemoresistance pathway". This means using clinical MCL samples, we will isolate the cancer stem population by FACS sorting and followed by RNA sequencing. Once we will have the knowledge of differentially regulated genes in primary samples, we will use this knowledge to modify our MCL cell lines such as Z138, MINO, MAVER, and G519 to further investigate the mechanism of chemoresistance. Once we know which pathway are involved using MCL lymphoma cell lines, we will use specific inhibitor to test the efficacy to eliminate the chemoresistance again using MCL cell lines only described above. Please note, no such inhibitor will be used either on patient's samples or patients itself.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Kindly justify sample size calculation.	This is the pilot study (first time we are performing) therefore we are using n=50 at least to define the cancer stem cells signatures.
Add consent form for controls.	Consent form for control group is attached.
Regarding sample transportation where does SGPGI come and picture: kindly explain?	Samples will be collected by Dr. Neeraj Jain and his lab staff whenever the samples at KGMU will be available.
If clinical pathological features are to be recorded then enclose clinical observation protocol. In addition, what is meant by rest of data please Clarify?	Included in material document. Rest of the data means all the data obtained using mantle cell lymphoma cell lines (in vitro assays) will be statistically test using Student's-test or ANOVA.
Mention potential risks and benefits.	Included in material document.
Outcome measures should also be briefed.	Included in material document.
Anticipated statistical analysis can also be briefed.	Included in material document.
Also state if this is of any national significance.	This project has both national and global impact by providing a potential knowledge about chemo-resistant mantle cell lymphoma associated to cancer stem cells. The deregulated pathway in cancer stem cells can be further characterized by other researchers in this field and may possibly be helpful to utilized as therapeutic molecule for targeted therapy, and will be beneficial for those Mantle cell lymphoma patients who are relapsed/refractory to chemotherapy.
The contact details of investigator are missing on first page of informed consent form.	has been added
How will the budget of 40 lakhs be utilized? Kindly clarify.	Budget of 40 lakh will be utilized for consumables and sequencing services only (attached project sanction report).

The reply from PI to the above Comments was forwarded to PR:-

Recommendation of PR: Approved

EC Decision: As above

Ref. code: 118th ECM IIA/P20

17- Clarification of research proposal entitled ***"Identification of molecular therapeutic target leading to development of chemo-resistance in non-GC DLBCL patients in India"*** sponsored by American Society of Hematology submitted by Prof. Seema Gupta, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 1125/RT/2022 dated 15th October, 2022.

Previous EC Comment	PI response
The duration of study is three years in the annexure while further extendable for one year in the methodology section but only one-year approval in CDRI IEC - kindly make it clear.	IEC has provided approval to investigator Dr. Neeraj Jain for one year but this extendable as mentioned in the approval letter. The IEC ethical is still active at CDRI (till 12/12/2022) and Dr. Jain has already submitted the extension request to CDRI.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	The CDRI IEC approval letter will be submitted to KGMU once this will be available. Please also note; this project is ending on 31st March 2024 and also this is extendable at no cost (mentioned in the terms and condition of this grant attached)
In annexure 1 a. While collection for banking future research clause States NO, the investigator further states that consent for future use of material biological will be obtained- why this confusion? b. Information sheet needs to be attached both for patients and controls (which is missing) c. While data monitoring states that there is no plan for reporting adverse events, the IEC approval of CDRI states that the investigator should report serious adverse events within 24 hours- kindly clarify period.	a. Collection for banking and future research will be done. b. Attached c. Adverse events have to be reported within 24hrs.This isnot required at CDRI.
Regarding the names of investigators: a. Kindly clarify/ rectify if the collaborators or guides/ co-guides? b. Dr Sanjeev Kumar and Dr Sunil Kumar will perform surgery: kindly clarify if biopsy alone will be done or some other surgical procedure. c. Since immuno- histochemistry needs to be done more appropriate to add a pathologist as a part of team.	a. Collaborators b. Biopsy alone will be done by Dr Sanjeev Kumar and Dr Sunil Kumar c. Pathologist has been added (Prof. Rashmi Kushwaha, Pathology Department)
Kindly clarify if only DLBCL will be included or all B-NHL patient in inclusion criteria.	This study will enroll and include only DLBCL.
Kindly mention: a. What are the anticipated molecular features associated with clinical outcomes? b. What will be the source of healthy B-cells? Will it be from controls? Mention briefly about bioinformatics analysis/ approach if possible. c. Kindly quote full form of CRISPR approach.	a. Chemo resistance cells have expression of differential cell surface receptors or unique cell surface proteins. Identification of these unique cell surface proteins in relapse and refractory Non-GC DLBCL tumors and targeting these unique receptors would help to overcome treatment resistance in Non-GC DLBCL. b. Healthy person of similar age group as of majority of DLBCL patients will be considered as control group. 5 ml blood in EDTA tube will be collected to isolate B cells from them. These samples will be utilized for next generation sequencing including RNA or proteomics. c. Clustered regularly interspaced short palindromic repeats
Kindly justify sample size calculation.	This is the pilot study (first time we are performing) therefore we are using n=50 total DLBCL patients samples.
Add consent form for controls (if applicable)	Attached

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Regarding sample transportation where does SGPGI come in picture: kindly explain	Samples will be collected by Dr. Neeraj Jain and his lab staff whenever the samples at KGMU will be available.
	If clinical pathological features are to be recorded then enclose clinical observation protocol. In addition, what is meant by ' rest of data': please clarify?	Included in material document. Rest of the data means all the data obtained using mantle cell lymphoma cell lines (in vitro assays) will be statistically test using Student's-test or ANOVA.
	Mention potential risks and benefits.	Included in material document.
	Outcome measures should also be briefed.	Included in material document.
	Anticipated statistical analysis can also be briefed.	Included in material document.
	Also state if this is of any national significance.	This project has both national and global impact by providing a potential knowledge about chemo-resistant diffuse large B cells lymphoma associated to changes in cell surface proteins. These cell surface proteins can be further characterized by other researchers in this field and may possibly be helpful to utilized as therapeutic molecule for targeted therapy and will be beneficial for those DLBCL patients who are relapsed/refractory to chemotherapy.
	The contact details of investigator are missing on first page of informed consent form.	has been added
	It is mentioned that US$150,000 will be the budget: so will some part of this budget be diverted for KGMU? Kindly clarify	Budget of US$150,000 will be utilized for consumables, one manpower, computer purchase and conference attend, and publication charges payment and sequencing services only (attached project sanction report). No fund will be transferred to KGMU, any consumable required for sample collection can be provided from this fund through CDRI.

Previous EC Comment	PI response
Two Co-PIs are SRs Not acceptable according to University Guidelines.	As per the instruction, both SR's have been removed and the updated Investigator Undertaking form is attached for your kind

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		review and reference
	PI has mentioned in Point 10 that risks of doing this study are not reasonable compared to anticipated benefits. Thus, conducting such a study will be completely unethical.	In this study, the study drug is developed as a bio similar to the approved medication, 'EYLEA'. Due to this fact that this study involves with no placebo or sham arm treatment, the risk of the study drug are expected to be similar to the risks of the market available, approved EYLEA. Hence, the risk category was not selected. However, as 2 mentioned in the protocol and in the subject informed consent form, the most common side effect / risk in subjects receiving EYLEA are conjunctive hemorrhage, eye pain, clouding of the lens, moving spots in vision etc., During the consenting process, prior to the signatures, the Investigators will explain the side effects to the participants as mentioned in detail in page no 8 of the informed consent form. According to the above mentioned details, we have also updated the Annexure and attaching the document as an enclosure for your kind review and reference.
	Remove SR as Co-PI	As per the instruction, both SR's have been removed and the updated Investigator Undertaking form is attached for your kind review and reference
	In point 10, you have mentioned that risk of the study.	Described in 2nd point of this table.

The above comment forwarded to PI was reviewed by PR:-

Recommendation of PR:

- The sponsor information in form and DCGI documents is different.
- What investigations will be done locally?
- What tests and imaging will be done for this study and how will data be transferred securely for central imaging review?
- PI needs to know the difference between study duration and duration of subject participation.
- Confidentiality and privacy section: not filled.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	A letter was received in the office of the Ethics Committee on 30/05/2022. The patient has visited the site for wk 24 visit on 26th August, 2019 and informed that she has mild pain in her abdomen since 19th August, 2019. Pentofer 40 was advised for pain in abdomen. She has completed the visit procedure. On 28th August, 2019, PI has received an alert for the subject with high S Amylase and S Lipase level G4 toxicity. PI has called the patient to visit the site immediately. Patient visited the site on 29th August, 2019. A retest sample was sent for S Amylase and S Lipase and the patient was hospitalized for close monitoring, further evaluation and management of the event. USG abdomen was performed on 30th August, 2019. Patient was discharged on 31/08/2019 as serum Amylase and S Lipase levels reduced and the patient was clinically stable and asymptomatic. Patient was advised to visit the site after one week for a repeat test. A repeat blood sample was sent to the central lab for Amylase and Lipase tests on 09th September, 2019. Reports were received on 16th September, 2019 and were within normal range. Patient was informed to restart IP on 21st September, 2019. ***Recommendation of PR:-*** The SAE (Hospitalization) is likely due to disease outcome (Rheumatoid arthritis) and not due to the Interventional product (Filgotinib) as Subject was taking IP from 13th March, 2019 (Starting date) and event reported to PI on 26th August-2019 i.e. more than 5 months has elapsed after starting the interventional drug. A causality relationship cannot be established. Moreover, as the subject was immediately hospitalized and given proper management which resolved the SAE (hospitalization due to pancreatitis); thus, no compensation is required. **ADR sub Committee Comment:** ▪ The Committee is of the opinion that this information should have been given immediately as per protocol. **ADR sub-Committee Decision:** Noted ***Ref. code: 86th ECM II E/P1***
2.	ADR of research protocol entitled ***"A multicenter, open label, long-term extension study to assess the safety and efficacy of filotinib in subjects with Rheumatoid Arthritis"*** sponsored by M/s KlinEra Corporation India, Mumbai, by Dr. Puneet Kumar, Department of Rheumatology, King George's Medical University, U.P., Lucknow vide letter no. Rh/CT/40/2022, dated 24th September, 2022. **Subject ID no. K/15876-44017** **Subject Initial:** R-K **Gender:** F **Age:** 41 yrs, 08 months, **Weight:** 50 KG

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Height: 145 CM **Hospitalized:** 29/08/2019 **Discharge Date:** 09/09/2019 **Patient History:** A letter was received in the office of the Ethics Committee on 24/09/2022. The patient had visited for wk 24 visit and informed that she had a gland in Neck with fever since 14th August 2019. Ultrasound was performed and findings were suggestive of left supraclavicular Lymphadenopathy (infective/inflammatory). Patient was hospitalized for further evaluation and management. Patient also had C/o decreased appetite, Nausea, Vomiting, mild Dysphagia, Fever with Chills. FNAC was done on 30th August, 2019. Cytomorphology was consistent with Reactive Lymph Node Hyperplasia. No Granuloma or atypical cells were seen. Patient was treated with Inj. Emset 8mg IV TDS, Tab Calcium 500mg 1BD, Cap. Sompraz-D 1OD BBF, Tab Dolo 650mg SOS, Inj Pantocid 40mg IV OD, Inj Ceftriaxone iG IV BD, Tab Cloze 0.5 mg 1OD HS. Treatment advice on 9.9.2019: Tab Dolo 650 mg SOS, Tab Cefixime 200mg 1BD X 5 days, Tab Cloze 0.5mg 1 OD HS, Tab Adirab DSR 1 OD BBF. ***Recommendation of PR:-*** The SAE (Hospitalization) is likely due to disease outcome (Rheumatoid arthritis) and not due to the Interventional product (Filgotinib) as the subject was taking IP from 13th March, 2019 (Starting date) and event reported to PI on 14th August-2019 i.e. 5 months has elapsed after starting the interventional drug. Therefore, causality relationship of SAE with the IP drug is difficult to assess and cannot be established as the subject was managed and treated properly in the hospital and was discharged safely after recovery; thus, no compensation is needed. (Follow-up after discharge of the subjects after the occurrence of SAE may be submitted by PI for further monitoring and for signaling of post marketing cases in this clinical trial for both of the above SAEs). **ADR sub Committee Comment:** ▪ The Committee is of the opinion that this information should have been given immediately as per protocol. **ADR sub Committee Decision:** Noted ***Ref. code: 86 ECM-IIE/P1***
3-	ADR of research protocol entitled ***"Evaluate the effectiveness, safety and tolerability of various doses of Linezolid in combination with Bedaquillne and pretomanid in Adults with Pre-Extensively Drug-Resistant (Pre-XDR) or Treatment Intolerant /Non-responsive Multidrug-Resistant ($MDR_{TI/NR}$) Pulmonary Tuberculosis in India"*** sponsored by ICMR-NIRT, New Delhi submitted by Prof. Surya Kant, Head,

	• SAE doesn't appear to be related to the study international product and appears to be related to disease outcome. **ADR sub Committee Comment:** • As above **ADR sub Committee Decision:** Noted ***Ref. code: 102 /ECMIIA/P24***
II-A	**New Proposal**
1.	Research proposal entitled "***Self-directed learning readiness among medical, dental, and nursing students: a cross-sectional study***" submitted by Prof. Apjit Kaur, Department of Ophthalmology, King George's Medical University, U.P., Lucknow vide letter no. 785/2022 dated 23rd August, 2022. ***Recommendation of Primary reviewer:-*** • Approved **EC Decision:** As above ***Ref. code: 119th ECM IIA/P1***
2.	Research proposal entitled "***Determinants of readmission to the intensive care unit: A Hospital data based approach***" submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 227/CCU/2022 dated 5th September, 2022. ***Recommendation of Primary reviewer:-*** • There are different annexures including patient consent form, but the proposal details are missing. **EC Comment:** • As above **EC Decision:** Approval after modification ***Ref. code: 119th ECM IIA/P2***
3.	Research proposal entitled "***Effect of dopamine as VEGF antagonist on progression of sepsis to septic shock, ALI (acute lung injury) and AKI (acute kidney injury)***" submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 225/CCU/2022 dated 5th September, 2022. ***Recommendation of Primary reviewer:-*** • To mention the incidence of septic shock ALI/ AKI in severe sepsis and how much reduction is anticipated? Sample size to be mentioned accordingly. • Proper patient information sheet needs to be attached both in English and Hindi. • The aim indicates estimation of VEGF levels, while no biological samples will

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	be collected as per the submission- How will assess of VEGF levels be made. As there is no co-investigator other than Department of anaesthesiology where will this VEGF be estimated and how? Also all relevant lab work on such patients may be mentioned in methodology section. • How will the third aim be assessed i.e. survival benefit? Whether it would be a short-term survival benefit or long-term survival outcomes? What data will be collected in this regard? • Apart from describing the methodology in detail also attach the data collecting sheet/ protocol to support the aims and objectives. • If no biological specimen is to be obtained then what is the role of cytogenetic lab? • What will be the dosing schedule of dopamine? Will it be over and above of routine clinical requirement- if yes, then what will be the anticipated adverse effects that further needs to be mentioned in informed consent form? • The project needs to be re-written with the literature, review, methodology, anticipated data, outcomes and statistical analysis according to all the three aims and objectives. **EC Comment:** • As above **EC Decision:** Revise and Resubmit, Give a table of revisions done. ***Ref. code: 119th ECM IIA/P3***
4.	Research proposal entitled ***"The diagnostic and prognostic role of vascular endothelial growth factor- A in patients with early sepsis"*** submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 228/CCU/2022 dated 5th September, 2022. ***Recommendation of Primary reviewer:-*** • Proper patient information sheet needs to be enclosed both in English and Hindi. • Sample size justification is to be included. • Methodology is grossly incomplete. • There is No indication of VEGF estimation as has been mentioned in the title. • How will the diagnostic role of VEGF be established? • How will the prognostic role of VEGF be established? • Anticipated outcome variables need to be mentioned. • Anticipated statistical analysis need to be mentioned. • A co-investigator other than Anesthesiologist need to be included who can do VEGF estimation assessment. • The review of literature should also mention the diagnostic and prognostic status of VEGF in sepsis. • Overall the project needs to be rewritten and all the above points to be clarified. **EC Comment:**

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• As above **EC Decision:** Revise and Resubmit, Give a table of revisions done. ***Ref. code: 119th ECM IIA/P4***
5.	Research proposal entitled ***"Analyzing tympanic membrane central perforation using AI protocol: a pilot study"*** sponsored by Joint Collaboration by KGMU, AKTU submitted by Prof. Anupam Mishra, Department of Otorhinolaryngology & Head & Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no. 602/ENT/AM/2022 dated 8th September, 2022. ***Recommendation of Primary reviewer:-*** Pending • Approved. A consent waiver is applied for and may be granted. **EC Decision:** As above ***Dr. Anupam Mishra did not take part in the discussion & making decision.*** ***Ref. code: 119th ECM IIA/P5***
6.	Research proposal entitled ***"Randomized controlled trial of herbal product (HF-Gel) for treating vulvovaginal candidiasis with clotrimazole gel as control"*** sponsored by CSIR-National Botanical Research Institute Lucknow submitted by Dr. Manju Lata Verma, Associate Professor Department of Obst. & Gynaecology, King George's Medical University, U.P., Lucknow vide letter no. OG/1924/2022 dated 8th September, 2022. ***Recommendation of Primary reviewer:-*** Pending • Sample size justification has not been given. • The IEC form mentions the study as a 'Clinical Trial' but denies that it is a Investigational New Drug (section 3 iv of IEC form) • Response to the question 'Is the risk reasonable' has been ticked a 'No'. • The proforma mentions that DCGI clearance is not application. • No mention of a trial registry in the proforma. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 119th ECM IIA/P6***
7.	Research proposal entitled ***"A study on assessing the role of circulating tumor DNA/circulating free DNA (ctDNA/CfDNA) ratio in oral squamous cell carcinoma progression through RNA sequencing meta-analysis and subsequent real-time PCR"*** submitted by Prof. Shaleen Chandra, Head, Department of Oral Pathology & Microbiology FODS, King George's Medical University, U.P., Lucknow vide letter no. 865/OP/2022 dated 31st August, 2022. ***Recommendation of Primary reviewer:-*** • Principal-Investigator has stated that the project is an ICMR multi-centric project; however no communication regarding the same from ICMR has been attached to the proforma.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Budget approximation is presented but the approval from ICMR is not attached. • Answer to the question 'is the risk reasonable' has been mentioned as 'No'. **EC Comment:** • As above **EC Decision:** Approval subject to modification ***Ref. code: 119th ECM IIA/P7***
8.	Research proposal entitled "***Role of peer assessment in modifying professional behavior and self-assessment among phase I medical undergraduates: A prospective interventional study***" submitted by Prof. Jyoti Chopra, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 295/Anat/2022 dated 13th September, 2022. **EC Decision:** Approved ***Ref. code: 119th ECM IIA/P8***
9.	Research proposal entitled "***Clinical profile of young rectal cancers in India, A retrospective audit***" submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/1457/2022 dated 30th August, 2022. **EC Decision:** Approved ***Ref. code: 119th ECM IIA/P9***
10.	Research proposal entitled "***FOXTROT 2 India: pilot randomised trial evaluating neoadjuvant chemotherapy in older and/or frail patients with locally advanced but operable colon cancer***" submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/1453/2022 dated 30th August, 2022. ***Recommendation of Primary reviewer:-*** • Multicentric drug trial. • IEC approval of other centers should be provided. At least the main coordinating centre. • The drug trial is on old and frail patients but under subject selection – the Vulnerable subject Is ticked as 'NO' . They will be enrolling old and frail patients. • Need to address this issue. • See pages 28 and 29 for frailty score. It also includes cognitive domain. Of course the inclusion criteria mentions. Patient able and willing to provide written informed consent for the study'. • PLEASE TAKE OPINION FROM SOME EXPERT ABOUT THE DRUGS IN TRIAL. • The safety and efficacy of NAC in the fit colon cancer population has been established in the FoXTROT 1 study. However, benefits have not been proven

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	in frail or older patients, not significantly represented in that trial. Two important findings suggest that this group should be studied. Firstly, major postoperative complications were reduced in patients who had received NAC, and secondly that subgroup analysis shows evidence of a comparable benefit in older and frail patients. We hypothesise that this population may gain most from a NAC approach. These benefits may be enhanced in the Indian subcontinent, where more patients present with locally advanced disease. • Patient information brochure is comprehensive but too big. Need to be reduced, otherwise no-one will read. **EC Comment:** • Optional video/audio may be needed. • Kindly provide Patient information sheet. **EC Decision:** Approval subject to modification & fulfillment administrative formalities. ***Ref. code: 119th ECM IIA/P10***
11.	Research proposal entitled "***Anorectal melanoma: clinicopathological features and correlation with survival-prognostic model***" submitted by Dr. Shiv Rajan, Associate Professor, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONC/1458/2022 dated 30th August, 2022. ***Recommendation of Primary reviewer:-*** • Retrospective study and waver of consent has been asked. It is a multicentric study. There is no information about the other centers and what is the approval of their IECs. • To explore the molecular and biomarker profile of the anorectal melanomas especially for BRAF, cKit, RAS and PDLL – This is one of the aims and the researcher says that if previously this testing had not been done then the testing for the same will be performed using the formalin fixed paraffin embedded tissue by sequencing for BRAF, cKit and RAS and by IHC for PDL1 as per the established protocols in the pathology department. • The committee should see if this is eligible for the waver of consent. • The follow up data will be included as available in the records. Please confirm whether the patients will be recon acted for the follow up. **EC Comment:** • When initial samples were collected was approval taken for future use? • Waiver of informed consent approved it patients are not re-contacted. **EC Decision:** Approval subject to modification ***Ref. code: 119th ECM IIA/P11***
12.	Research proposal entitled "***Intra ocular pressure changes with reading on a smart phone (Digital Print) compared to conventional printed text among healthy***

	Minutes of **XIII-PG Thesis sub Committee"** Meeting of "Institutional Ethics Committee" ***virtually*** held on 18th October, 2022 from 3.00 P.M. ***The following members were present in the Meeting:-*** 1. Dr. G.G. Agarwal -Member 2. Dr. A.A. Mahdi -Member 3. Dr. Rajendra Nath -Member 4. Dr. Shally Awasthi -Convener ***The following member was present in the Meeting:-*** 1. Dr. Anita Rani -She has given her written comment.
IA	**Action Taken**
1-	Clarification of research proposal entitled ***"Molecular mechanisms of the preventable causes of Oral cancer and precancer in through polymorphism in DNA base excision repair genes in patients with tobacco products habits"*** submitted by Dr. S. Ezhilarasi, JRI, Department of Oral & Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. OMSD/789/22 dated 21st September, 2022.

Previous PGTSC Comment	PI response
The study design is not mentioned	Study design has been mentioned A hospital based case-control study.
The sample size calculation uses formula for two groups. What are the two groups? What are the different quantities (parameters) used in the formula	Sample size calculation and two different groups has been mentioned
There is no statistical analysis section	Statistical analysis section has been included
The statistical analysis section should be more specific	Statistical analysis section made more specific

	The above Comment forwarded to PI was reviewed by PR:- ***Recommendation of PR:*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: IX-PGTSC-IIA/P3***
2-	Clarification of research proposal entitled ***"An evaluation of lingual split vs buccal guttering technique in extraction of lingually placed impacted mandibular third***

(Shally Awasthi)
Member-Secretary, IEC

(Alpk Dhawan)
Chairman, IEC

molars- A randomized control trial" submitted by Dr. Reading Well Kharmawlong, JRII, Department of Oral and Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no.801/OMSD/22 dated 30th September, 2022.

Previous PGTSC Comment	PI response
Suggesting changing randomized controlled trial to a comparative study	After approval from my thesis guide I hereby changing my study design to a comparative study.

The above Comment forwarded to PI was reviewed by PR:-
Recommendation of PR: Approved
PGTSC Decision: Approval ratified

Previous PGTSC Comment	PI response
Aim and objectives are not clear. The aim states & quot; evaluate the efficacy & quote;, whereas objectives states to find & quote; incidence & quote;.	Now the objectives have been changed as per our aim of the study.
If it is really, RCT, all the fundamentals are missing. For example, (i) proper formulation of research hypotheses, (ii) study variables, (iii) primary and secondary outcome measures, (iv) method used to generate the random allocation sequences, including details of any restrictions (blocking, stratification etc.) (v) How double blinding is done, (vi) how the success of masking assessed.	i) Formulation of the research hypothesis has been done. ii) Study variables have now been mentioned in the revised protocol. iii) Outcome variables have been mentioned. iv) Now randomization has been mentioned in detail. v) As per suggestion, the success of the masking assessing method has been mentioned in the revised protocol.
The sample size calculation is arbitrary in the absence of proper research hypothesis.	Now the research hypothesis is mentioned in the revised protocol, and the sample size calculation is based on the study hypothesis.
The statistical methods used to compare groups for primary outcomes, methods for additional analyses, such as subgroup analyses and adjusted analyses.	As per suggestion, now the statistical analysis has been re-written and incorporated in to the revised protocol.
How the results will be presented: (i) Participants flow, (ii) baseline data, (iii) outcomes and estimation, (iv) adverse events, etc.	Now as per suggestion, way of result presentation will be mentioned in the revised protocol.

Study design not mentioned in protocol	Study design is already mentioned in the protocol and a copy of study design is attached herewith
No of Co-PIs are 4 (including HOD) from partment with almost similar roles- Please Justify.	A copy of detailed roles of each Co-PI is attached herewith.
Please give details of.Clinical parameters to.be seen- 1. Gingival.pigmentation..will you assess 2. How pts. satisfaction analysis will be assessed- If any structured questionnaire are there then attach the same.	Gingival pigmentation index is not a part of my thesis topic. 2. □ Patient Satisfaction Analysis (by Visual Analogue Scale) It will be done by providing the patients a printed 10 cm long line Visual Analogue scale (VAS), with the words "Not satisfied" (0% satisfaction) anchored to the extreme left and the word "Satisfied" (100% satisfaction) anchored to the extreme right. Each patient will be asked to make a handwritten mark on the line, in order to reflect how satisfied he/she is by the treatment provided. Each centimetre measured on the line starting from the extreme left and up to the extreme right will denote 10% satisfaction. For example, a mark made by the patient which lies 2cm away from the extreme left of the line will denote 20% satisfaction. A prototype of VAS to be used: Reference: Voutilainen A, Pitkäaho T, Kvist T, Vehviläinen-Julkunen K. How to ask about patient satisfaction?

Previous EC Comment	PI response
The rights to the participation are wrong and needs to be rectified.	The rights to the participation have been modified as per the suggestions.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR: Provisionally Approved
EC Decision: Approved

Ref. code: 104thECMIIA/P31

2- Clarification of research proposal entitled "***Effect of vocational rehabilitation in myocardial infaraction patients and returning back to their work after myocardial infarction***" submitted by Ms. Meenakshi Mishra, Ph.D. Scholar 2019 under the guidance of Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no.434/Cardio/Res/2022 dated 24th November, 2022.

Previous EC Comment	PI response
Spelling and syntax errors in covering letter.	It was perhaps the typo error which got overlooked for which I tender my humblest of apologies.
Can PHD Student be PI?	Yes , PI is PhD student
If this is revised review, details of comments of first review.	This is the first review.
Sec. 5 Which employees (special group) will be included and why?	Employed group refers to salaried persons involved in any kind of job to earn their livelihood. We wish to evaluate the role of Vocational Rehabilitation of MI patients who resume their work (Specified in Sec. 5)
Risk is not reasonable …. Why do the study?	Yes, there is a reasonable amount of risk component involved and hence the harvested data will be compared to the anticipated benefits to subjects as updated in Sec. 10.
How will the patient benefit?	This is an attempt to demonstrate that Vocational Training during post-MI phase improves the proportion of patients returning to their work similar to what has been reported earlier too.
Details of DSMB	No DSMB is there as has been updated in Sec. 11
PhD student should write much better review of literature.	The review of literature has been thoroughly redone per attachment.
Hypothesis	The extensively revised review may kindly be looked into.
When there is consensus that vocational rehabilitation should be done, not providing	It is proposed that structured Vocational Rehabilitation by dedicated Para- medical

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

VR to control is. It is proposed that structured Vocational Rehabilitation by dedicated Para- medical person will be compared versus routine, minimal Vocational Rehabilitation suggested by unethical	person will be compared versus routine, minimal Vocational Rehabilitation suggested by treating physician during a follow up visit in OPD.
App tracking activities is violation of patient privacy.	There is absolutely no compromising of patient privacy. More, there is no App tracking activity involvement whatsoever under any circumstances. We will simply collect, collate and analyze patients vital such as: daily step count and calorie count through this App. We will further transmit the data through Whatsapp or messages over the phone - a common practice. Currently, these applications are employed on a daily basis since the people's awareness; knowledge has tremendously improved for health issues. It basically is an Indian App. which harvests minimal data.
Exclusion Criteria: define high risk patients.	High risk patients refers to those with LVEF & lt; 30% or NYHA class III/IV or uncontrolled arrhythmia.
What type of randomization takes place? Please specify elements of RCT.	Computer- generated Random Table method will be employed.
Sample size calculation is not for RCT	Calculation is corrected by using G*Power3.1.9
What is appropriate statistical test?	F-test, ANOVA (t- tests) would be used to compare variance of two different sets of values.
Are the questionnaire is self designed or old?	The questionnaire has not been self-designed but derived from WHO-QOLBREF questionnaire format. It's Hard-copy will be provided to the patient in both Hindi/ English language as per need.
Keep activity data as hard copy.	Yes, we will mandatorily retain activity data in Hard-copy format.
Use of a private app is not permitted.	The App that we will employ is an Indian product. It is simply to facilitate collection of vitals, Daily Step Count and Calorie Count only.

The reply from PI to the Comments was forwarded and reviewed by PR:-
Recommendation of PR:

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• This appears to be a PhD Thesis of 2019 enrollment. It's at least 3 years from enrollment time and research work has not yet been approved. Institute to decide if this is alright. • Can a PhD candidate be called PI? • The PI mentions in section 10 that the risks are unreasonable, when compared to benefits, to conduct this study. Thus, the research is unethical and cannot be approved. **EC Comment:** As above **EC Decision:** Revise and Resubmit, Give a table of revisions done. ***Ref. code: 113th ECM II B- Ph.D /P3***
3-	Clarification of research proposal entitled "***Development of Indian TNBC patients-derived organoid (PDO) and xenograft (PDX) models to understand its therapeutic vulnerabilities***" sponsored by ICMR submitted by Prof. Dipak Datta, Co-PI & Head, Cancer Biology Division Central Drug Research Institute through Prof. Anand Kumar Mishra, Head, Department of Endocrine Surgery, King George's Medical University, U.P., Lucknow vide letter no. ENDOSURG/377/2022 dated 3rd November, 2022. **Previous EC Comment:** • ICF: study procedure has to be explained to the patient properly. ***The reply from PI to the above Comments was forwarded to PR:-*** ***Recommendation of PR:*** Provisionally Approved **EC Decision:** Provisionally approved. Please submit approval of CDRI. ***Ref. code: 116th ECM IIA/P16***
4-	Clarification of research protocol no. EX6018-4758 Study Phase: 3 a entitled "**ZEUS** - ***Effects of ziltivekimab versus placebo on cardiovascular outcomes in participants with established atherosclerotic cardiovascular disease, chronic kidney disease and systemic inflammation***" sponsored by Novo Nordisk India Private Ltd. submitted by Prof. Rishi Sethi, Department of Cardiology King George's Medical University, U.P., Lucknow, vide letter no. 421/Cardio/Res/2022 dated 17th November, 2022.

Previous EC Comment	PI response
Approval attached. approval, for export of biological samples: not there is a process and certificate for as attached with proposal 720.	As per Gazette of India part 2 section 3 subsection 2 dated 4 Aug 2016; notification number 19/2015-2020, the import of human biological samples by the Indian diagnostic laboratories/Indian Clinical Research Centers for lab analysis D testing or export of these materials to foreign laboratories is permitted by Customs authorities at the port

Ref. code: 117th ECM II B-Ph.D/P5

8- Clarification of proposal entitled ***"A randomized, multicentre, double blind, placebo controlled, parallel-group, study to evaluate the efficacy and safety of linaclotide once daily of Dr. Reddy's laboratories limited in patients with chronic constipation"*** sponsored by Dr. Reddy;s laboratories limited submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. MED/CT/28/2022 dated 9th November, 2022.

Previous EC Comment	PI response
Section 3(ii) ad 3(iv) is contradictory if Drug has not been approved else were. It is a IND/ND.	Section 3(ii) was inadvertently mentioned "None", I would like to clarify that Study drug (Linaclotide) has been approved in US, Canada, Japan, China and EMA region, however Linaclotide have not been marketed in India yet. Sponsor (Dr. Reddy's Laboratories Limited) is planning to market the product in India. As per Regulatory requirement, sponsor has decided to conduct phase III clinical trial in India. Section 3(iv) The investigational drug has been already approved in other countries however study drug (Linaclotide) has not been approved in India yet. Investigator Brochure copy and DCGI Approval letter had been submitted along with EC dossier. After the Correction Annexure 7 copy attached for the reference.
The total study duration needs to be mentioned.	Total study duration around 16 weeks (4 weeks screening including pre-treatment period, 12 weeks treatment period). We had captured this information in Annexure 07.
Why use direct identifiers?	We would like to clarify that patient confidentiality would be maintained strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note. We will not share any subject related confidential information except for Regulatory Authority requirements.

The reply to above Comments was forwarded and reviewed by PR:-
Second opinion of PR:
- Using direct identifiers is not acceptable.

The reply from PR to the above Comments was forwarded to PI:- Response received from PI which was forwarded to the PR vide this office letter no. 1627/Ethics/2022 dated 19th December, 2022.
Recommendation of PR:- Pending

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)

EC Decision: Defer to the next Meeting because quorum was incomplete.

Ref. code: 117th ECM IIC/P2

9- Clarification of research protocol no. BRADPL/CT/FDC/AZM/03/30 entitled ***"A multi-center, double-blind, randomized, active-controlled, comparative, parallel-group, phase III clinical study to evaluate the efficacy and safety of fixed dose combination of azelnidipine plus metoprolol succinate tablets in the treatment of subjects with stage 2 Hypertension"*** sponsored by M/s Akums Drugs & Pharmaceuticals Ltd. submitted by Dr. D. Himanshu, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. MED/CT/31/2022 dated 21st November, 2022.

Previous EC Comment	PI response
Section 3(iii) not filled.	Annexure 07 Copy attached with updated Section 3(iii).
Duration of the study not mentioned.	As per the sponsor study completion is expected March 2023. The study duration for our KGMU site will start once EC issues the approval letter for the study.
Direct Identifiers: Why?	Direct Identifiers marked as NO in updated Annexure 07. As per your valuable comment we would like to clarify that patient confidentiality would be maintain strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note and subject file. We will not share any subject related confidential information except for Regulatory Authority requirement. As per your valuable comment we would like to clarify that patient confidentiality would be maintain strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note and subject file. We will not share any subject related confidential information except for Regulatory Authority requirement.
Eating a tablet is physical discomfort. Why ticked no?	After the correction updated form submitted for your reference. There is minimal or no risk for eating a tablet.
Statement expert to comment in sample size.	Sample size supporting document attached for your reference.
Give study duration.	The study duration is started after the EC approval for KGMU site and Study completion date is March 2023 for all over sites including KGMU.

The above Comment forwarded to PI was reviewed by PR:-

Second opinion of PR:

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

- Duration of subject participation has not been mentioned.
- Prof. G.G. Agarwal to comment on Sample size estimation. It seems to be extremely small with too many arms to reach a reasonable conclusion.

The above Comment forwarded to PI:-

- The PI has informed this office that **this protocol is over.**

EC Decision: Trial has closed.

Ref. code: 117th ECM IIC/P6

10- Clarification of research Protocol no. GLK-2101 entitled ***"A randomized, assessor-blind, placebo controlled, multi center, clinical endpoint bioequivalence study to compare the efficacy and safety of generic fluticasone propionate inhalation aerosol USP 44mcg (Glenmark Pharmaceuticals Ltd) to flovent HFA (Fluticasone propionate inhalation aerosol) 44mcg (GSK Group of Companies) in treatment of patients with bronchial asthma"*** sponsored by M/s Glenmark Pharmaceuticals Ltd. B/2 Mahalaxmi Chamber submitted by Prof. R.A.S Kushwaha, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. RM/CT/07/2022 dated 21st November, 2022.

Previous EC Comment	PI response
PI needs to know the difference between study duration and duration of subject participation.	As per the sponsor study completion date is expected Dec 2023 the study duration is started after the EC approval for KGMU site. Total Study Duration is 04 week per enrolled subject, as per the study design total 07 days is screening period and 14 days is a Run in period and 04 weeks is a treatment period for each enrolled subject in the study.
PI to kindly furnish document by DCGI that states that Direct Identifiers should be used.	As per your valuable comment we would like to clarify that patient confidentiality would be maintain strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note and subject file. We will not share any subject related confidential information except for Regulatory Authority requirement.
Does the PI doesn't consider that blood and urine as body fluids.	As per the section 07 HbA1c, Hematology, Blood Chemistry and urine pregnancy test (for Female subject only) will be tested for safety parameters.
Correct and updated form not submitted.	After the correction updated form submitted for your reference.

The reply to above Comments was forwarded and was reviewed by PR:-

11- proposal entitled ***"Evaluation of changes in oral health profile, sensory acuity, emotional well-being and nutritional status of post-menopausal women: A pilot study"*** submitted by Dr. Vikram Khanna, Additional Professor, Department of Oral Medicine & Radiology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 587/OMSR/2022 dated 19th November, 2022.

Previous EC Comment	PI response
This is prospective cohort Comparative study.	Changes made in the proposal according to the Suggestion.
Since this is pilot study, sample size calculation is not required.	Changes made in the proposal according to the Suggestion.
How the reliability and validity of the questionnaire shall be checked?	The questionnaire used for the evaluation is a group of many standardized questionnaires used for different parameters. We want to assess four parameters (oral health status, sensory activity, emotional well-being and nutritional status) collectively and assess their relationship intra- and Inter group.
Statistical analysis section is very general. It should be specific to the study under consideration.	Demographic and treatment details from patients would be recorded the data would be entered into an Excel worksheet. The analysis would be performed using the commercially available Statistical Package for Social Sciences–20 statistical software (SPSS -20). Assessment of reliability and validity of the data would be performed Reliability: Internal consistency would be measured using Cronbach's alpha coefficient. Validity: Construct validity would be assessed for The structured questionnaire by correlating the constructs with existing tools. Content or face validity would be evaluated for the original content by common consensus process in a multidisciplinary team setting, which consisted of Experts and patients. In order to validate the structure of the questionnaire confirmatory factor Analysis shall be performed. Significance level shall be computed at p & lt; 0.05 (2-tailed).
Consider using standardized questionnaire.	We have used standardized questionnaire used for different parameters and made a collection of standardized questionnaires for intra-and intergroup evaluation.

12. Clarification of proposal entitled ***"Effect of natural protein powder on lean muscle mass and body fat with resistance training: A randomized controlled trial"*** sponsored by DHR, New Delhi submitted by Prof. Dileep Kumar Verma, Department of Physiology, King George's Medical University, U.P., Lucknow vide letter no. 2758/PHY/2022 dated 7th November, 2022.

Previous EC Comment	PI response
Study design-RCT-CONSORT guidelines not followed – Method of randomization, blinding, sample size calculation not mentioned.	▪ **Study Design-** Simple random sampling will be followed in the study. ▪ **Method of randomization-**Random number table method ▪ **Blinding-** There is no blinding in the study. Therefore, it is mentioned in the project proposal that the study is unblinded or open label (Both researcher and the enrolled patients will be aware of the treatment(s). **Sample Size-**It is mentioned below.
Sample size calculation not done.	**Sample Size:** Sample size is calculated by using following Daniel's formula (1999) with the help of online sample size calculator (https://www.calculator.net/sample-size-calculator.html?type=1&cl=95&ci=5&pp=79.5&ps=10000&x=89&y=16) $Sample\ Size\ (n) = \frac{z^2 \times \hat{p}(1-\hat{p})}{s^2}$ Where, n is the sample size z is the z score s is the margin of error $\hat{p}$ is the population proportion Now, $z = 1.96$ $\hat{p} = 14\% = 0.14$

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		$(1-p) = 1-0.14$ s= 5% = 0.05 Thus the value of *n* comes out to be 182 for each group i.e., in case and control group. Assuming dropouts we make this figure 182 to be 190 for each group. Thus, Total number of subjects for both the groups i.e. case and control = **190+ 190 = 380** Therefore, 380 will be the total sample size of the study.
	From where PI will recruit the subjects (which OPD/IPD etc.)	▪ Resistance training is a strength training involving the performance of physical exercises that are designed to improve strength and endurance. ▪ The subjects not taking any supplement and already on resistance training (doing same type of resistance for the same period of time) will be enrolled in the study from gym in various localities of Lucknow city. ▪ The subjects will be enrolled as per the study's inclusion criterion.
	Where and how resistance training will be done and monitored assessed)	▪ With the collaboration of the gym, the Field Staff of the project will monitor the subjects performing resistance training in gym. ▪ The PI &Field Staff will recruit only those subjects who perform the same type of resistance training for the same period of time and not taking any supplement. Only the dietary intervention (plant based protein powder) will be given from our side.
	Scientific literature of plant based powder should be attached. If it is nutritional supplement, whether its FSSAI and GMP approved product?	**Attached** Yes it is FSSAI and GMP approved plant based protein powder manufactured by Herbalveda Pharmacy.
	Who will assess the	Herbal Valley plant based protein powder manufactured by Herbalveda

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

nutritional value of the powder by HPLC.	Pharmacy which is already HPLC tested for the assessment of the nutritional value. Details of Nutritional Information- **Attached**
In Inclusion/Exclusion criteria pregnant and lactating mothers not mentioned (as PI will recruit the subjects of either sex), Control group details about Inclusion/Exclusion criteria not given. Food frequency questionnaire – not attached.	**Inclusion and Exclusion Criteria** *Note: The inclusion and exclusion criteria will remain same for the case and control group, only the change is in the intervention i.e., intervention will be given to the case group and not to the control group.* **Inclusion Criteria** ▪ Resistance exercise doing individuals aged between 18-35 years. ▪ Subjects of either sex i.e., both male and female ▪ Subjects willing to consent in writing ▪ Subjects not taking any Protein supplement powder. **Exclusion Criteria:** ▪ Subjects not willing to participate in the study ▪ Aged <18 and >35 years ▪ Subject taking Whey and Casein Protein supplement powder. ▪ **Pregnant, nursing, or planning for pregnancy** ▪ Active medical condition- a known allergy or intolerance. ▪ History of head injury, seizures, or stroke ▪ Subjects having any medical or surgical illness requiring priority management ▪ Subjects having any medical condition like chronic illness, metabolic diseases, endocrinal diseases, congenital disorder, neurological and psychiatric disorder. ➢ Food frequency questionnaire – **Attached**

15- Clarification of research proposal entitled ***"Laryngotracheal and upper airway symptoms due to mechanical ventilation after orotracheal intubation in critically ill patients- A prospective multi-centre cohort study"*** submitted by Dr. Saumitra Misra, Assistant Professor, Department of Critical Care Medicine, King George's Medical University, U.P., Lucknow vide letter no. DCCM/1001/2022 dated 17th November, 2022.

Previous EC Comment	PI response
Kindly mention the name of other centers if this is a multi-centric study.	This study is proposed to be done across the following 10 centres in India – 1. Critical care medicine, St John's Medical College Hospital, Bengaluru, Karnataka 2. Surgical intensive care unit, Christian Medical College, Vellore, Tamil Nadu 3. Sanjay Gandhi Postgraduate Institute (SGPGI), Lucknow, Uttar Pradesh 4. Rajendra institute of medical sciences (RIMS), Ranchi, Jharkhand 5. All India Institute of Medical Sciences (AIIMS), Jodhpur, Rajasthan 6. Institute of Medical Sciences, Banaras

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Hindu University, Varanasi, Uttar Pradesh 7. King George Medical University, Lucknow, Uttar Pradesh 8. Manipal Hospital, Yeswanthpur, Bengaluru, Karnataka 9. PSG medical college hospital, Coimbatore, Tamil Nadu 10. Bharati Hospital and Research Centre, Vidyapeeth, Pune, Maharashtra.
	Regarding the secondary objective of assessment of quality of life kindly justify the assessment of quality of life without issuing any quality of life tool.	We are assessing quality of life (QOL) with respect to voice and swallowing in patients post-extubation in ICU. We are not studying the general QOL. EAT-10 and VHI-10 are validated, easy-to-use and reproducible questionnaires to assess the quality of life due to swallowing and voice problems.
	Kindly include sample size calculation formula.	The prevalence of stridor is the least among all other upper airway symptoms so anticipating the prevalence of combined laryngotracheal and upper airway symptoms will be close to the prevalence of stridor. Taking 7% prevalence from literature (6.7% combined prevalence from existing data) a sample size of 278 was calculated considering 3% absolute precision, 95% confidence limits. Software used : https://statulator.com/SampleSize/ss1P.htm l Reference: Dhand, N. K., & Khatkar, M. S. (2014). Statulator: An online statistical calculator. Sample Size Calculator for Estimating a Single Proportion. Considering the average extubation rate in our unit is around 20 per month, amounting to some exclusions, loss to follow up, consent denial, covid pandemic, and inclusion of other centers (which may have variable extubation rates) anticipating 6-12 months to achieve the necessary sample size. As factors associated with this complication are common and predictive modelling with factors

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		may help prevent these, a higher sample is desirable. So, patients will be screened and all potentially eligible patients we come across during the study period will be enrolled with a minimum of 280 patients. i.e., all patients (as many as eligible) during the study period will be enrolled in the study. Since the study is being done at 10 centres, each study centre will contribute 30 patients for the proposed study.
	In Annexure-I it is stated that 'collection of banking or future research' will not be applicable but in consent section it is clear that the 'consent for future use of biological material' will be obtained: Kindly resolve the discrepancy period.	Correction done.
	Kindly add a brief account on anticipated outcomes and statistical analysis process.	Anticipated outcomes: The anticipated prevalence of LTUAS will be around 6-10%. The individual prevalence of each will vary. The factors that may affect these symptoms will be the type of intubation, duration of mechanical ventilation, trauma to airways, sedation practices, agitation during ICU stay, etc will be analysed using multiple logistic regression. Statistical analysis plan: Demographic, clinical and disease-related variables will be presented as frequency (Percentage) and mean (S.D), median as appropriate. Categorical variables will be analysed using Chi-square test or Fisher's exact test (for binary variable). Multiple logistic regression will be performed to find factors associated with the laryngotracheal and upper airway symptoms. p value < 0.05 will be considered statistically significant.

16- Clarification of research proposal entitled ***"Randomized comparison of I-gel, baska mask, ambu aurgain and laryngeal mask airway protector for airway management of patients with anticipated difficult airway"*** submitted by Dr. Rati Prabha, Assistant Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. Anaes/1380/2022 dated 14th November, 2022.

Previous EC Comment	PI response
SADs comparison.	I-gel: It is anatomically preshaped, with the cuff made of gel-like soft thermoplastic elastomer. [1,2] The cuff is non-inflating type and anatomically fits the laryngeal, peri-laryngeal,and pharyngeal structures. It is available in 7 sizes. [2] It has an integrated gastric channel through which a gastric tube can be inserted. It has integrated a bite-block. A wide-diameter airway tube allows the insertion of an endotracheal tube through it. Major advantages are high oropharyngeal seal pressure(OLP) and fast device insertion. [1-4] 2. Baska mask: Unique feature is self- expanding membranous cuff- that inflates and deflates with inspiration and expiration. [1,5] The airway tube is oval-shaped and has an integrated bite block. [1,5,6] There are two gastric drains through which gastric drain can be inserted and active suction applied. [1] It is available in four sizes. An inbuilt hand-tab is used to increase the angulation and ease the device insertion. [1,5,6] 3. Ambu Auragain: It is an anatomically curved single-use SAD with an inflatable cuff. [7,8] It has an integrated gastric port. [7] For aiding endotracheal intubation through its airway lumen, it has a wide airway lumen and has no aperture bars. [7-9] 4. Laryngeal mask airway protector: It is a supraglottic airway device with cuff made of silicone. [10-12] It has two gastric access channels. [10] It has an integrated cuff pressure indicator. [10] It has integrated bite block. [10-12]
Are these devices routinely used? Are there any situations about the specific use of each type?	Yes, these devices are routinely used. There are no specific differences in indications/situations for use of each of these devices. These are used for patients with normal or difficult airways.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Another common indication is when endotracheal intubation is expected/anticipated to be difficult or endotracheal intubation has failed.
	What are standard guidelines? What are the protocols in KGMU ICU?	The '2022 American Society of Anesthesiologists Practice Guidelines for Management of the Difficult Airway' recommend the use of second-generation guidelines for management of difficult airway. [13] All the SADs used in the trial suitable this as all the four SADs are second generation devices. Currently, there no written protocol for use of SAD in KGMU ICU. The trial is to be conducted in operation theaters. There is no written KGMU protocol for management of airway and use of SAD/other devices in KGMU operation theater.
	Separate PID is not there. The information is in the consent form only. Is it ok?	Yes.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR:

- There is no PATIETN INFORMATION BROCHURE
- The information is consent mentions that THE ALTERATIVE TOPARTICIPATION IS THAT THEY WILL BE PROVIDED USUALCARE AS PER STANDARD GUIDELINES AND PROTOCOLS but what is the standard protocol is not mentioned.
- Routinely, do the anesthetists use any one of these?
- Which one of them? If any of these are used what are the reasons of choosing one of them. The methodology is not clear.
- To the questions asked, what is the current protocol, the answer provided is that there is no protocol at present.
- This needs clarification in the methodology so that the patient information brochure should include correct information about alternative to refusal to participate.
- Also standard care provided currently should be clearly mentioned.

Previous EC Comment	PI response
The PI has said that the risks involved are not reasonable. Thus, doing this study will be unethical.	The risks involved in this study are reasonable. No new drug trail is being conducted and the lignocaine HCl is considered a safe drug in humans. Corrections have been done accordingly in the proforma and copy attached.

The reply from PI to the above Comments was forwarded to PR:-

- What is the need for direct identifiers?
- Efficacy measures are not mentioned.
- Sample size calculation is not correct.
- Case record format is not attached.
- As this is an intervention study, and adverse effects can happen, needs to be reported, compensation should be accounted for.

EC Comment:

- As above

EC Decision: Revise and Resubmit, Give a table of revisions done.

23.	Research proposal entitled "***Distribution of nutrient foramina in scaphoid: A bone study***" submitted by Dr. Arvind Kumar Pankaj, Additional Professor, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 401/ANAT/22 dated 16th November, 2022. ***Recommendation of Primary reviewer:*** • Approved for waiver **EC Comment:** As above ***Ref. code: 120th ECM II A/P23***
24.	Research proposal entitled "***Study of biochemical parameters and socio-economic determinants of hepatitis-B infection in North Indian population: A public Health issue***" submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 2167/Med/22 dated 17th November, 2022. ***Recommendation of Primary reviewer:*** • Approved **EC Decision:** As above ***Ref. code: 120th ECM II A/P24***
25.	Research proposal entitled "***Obesity and its impact on public Health: An epidemiological study on Uttar Pradesh population***" submitted by Dr. Suchit Swaroop, Associate Professor, Department of Zoology, Co-PI Prof. Satyendra Kumar Sonkar, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 2166/Med/22 dated 17th November, 2022. ***Recommendation of Primary reviewer:*** • The decision of scientific review committee has not been made but it can be taken as approved. • The PI is a zoologist from Lucknow University. Kindly mention his role in this project dealing with obesity and public health or noncommunicable diseases? What will be the biochemical tests that will be carried out? Would it not be appropriate to add a pathologist / microbiologist and public health faculty as a co-investigator? • What are the other Hospitals that have been enrolled for this study and have given ethical clearance? Kindly attach the relevant documents. • Since this requires clinical data and investigation-details of the patient prospectively, the ICF needs to be included. • While at one point it is mentioned that duration the study is one year (from November 22 to November 23); at another place it is three years. Why is this confusion? kindly clarify. • Will privacy and confidentiality be not maintained? While it is indicated as NA in annexure 1, it is indicated otherwise in informed consent form. kindly clarify.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• What are the plans of reporting adverse effects? • As stated this is a "randomized- study". Kindly clarify as how randomization will be carried out? • The anticipated statistical analysis of outcome parameters is to be included. • The patient information sheet is not attached. Kindly attach both English and Hindi versions. **EC Comment:** As above **EC Decision:** Approval subject to modification, Give a table of revisions done. ***Ref. code: 120th ECM II A/P25***
26.	Research proposal entitled ***"Evaluation of Hyperbric oxygen therapy in OSMF"*** submitted by Prof. U.S. Pal, Department of Oral & Maxillofacial Surgery Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 914/OMSD/22 dated 18th November, 2022. ***Recommendation of Primary reviewer:*** • Annexure needs to be filled up completely such as the section of clinical trials, vulnerable subject types, data monitoring and list of attached documents. • The patient. Information sheet is not attached as per the standard operating procedure (Both English and Hindi version) contrary to data indicated in annexure 1. • Brief description under required headings (eg. point 4) is missing. • The review of literature in terms of rationale of using hyperbaric oxygen is not supported by references. The side-effects of hyperbaric oxygen also need to be mentioned. • Recent histories of ear surgery, along with evidence of chronic lung disease also need to be added in exclusion criteria. • If cases with dysplasia/ malignant changes in OSMF are to be excluded, then biopsy need to be considered in material method section. If biopsy is to be undertaken in every case of OSMF, then this needs to be mentioned before hand. • The study procedure in consent form need to be elaborated in terms of ruling out lung disease, apart from dysplasia/ malignant changes etc. There are well-known other complications of hyperbaric oxygen such as changes and vision and so close monitoring mission to be done for vision and lung condition or changing middle ear fluid/ function. Hence these remote complications need to be explained to the patient. • The methodology needs to be elaborated: a-What are the inclusion criteria specially age. b-What Pre -therapy investigations will be carried out? c- How will the improvement in mouth opening be judged? d-What will be the criteria of declaring significant subjective improvement in spicy food tolerance? e-What would be the duration of follow-up period?

3- Clarification of research proposal entitled ***"A comparative study on lung function of post tuberculosis obstructive pulmonary disease (TOPD) versus chronic obstructive pulmonary disease patient"*** submitted by Dr. Bishal Debbarma, JR, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 1316/22 dated 8th December, 2022.

Previous PGTSC Comment	PI response
The objectives should be very specific. The first objective is to find out prevalence, whereas the	I have changed my first objective to :

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	other objectives are pointing toward "Comparative study"	• To compare lung function in TOPD patient versus COPD patient using impulse oscillometry. • Comparative spirometric assessment of TOPD patient versus COPD patients. • Lung volume assessment with diffusion capacity of lung for carbon monoxide (DLCO) of TOPD patients versus COPD patients Finding out prevalence won't be included in the study.	
	Research hypothesis should be properly defined after identifying the parameters of the study.	My research hypothesis – Although extensive parenchymal destruction due to TB and following airflow limitation is clinically common, the degree of airflow obstruction and bronchodilator esponsiveness have not been evaluated objectively; moreover, treatment guidelines for those with secondary airflow obstruction due to post tubercular sequelae may be confused with those of COPD. Thus, we compared pulmonary function and bronchodilator responsiveness in Post TB OAD and COPD patients, and also examined whether	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	differences exist in lung functions.
The sample size calculation is inadequate. It Should be for "Comparative study" not for prevalence.	My sample size will be for comparative study between COPD and TOPD Patients Sample size. On the basis of previous study, the changes in the Baseline Post-bronchodilator FVC% in TOPD (47.29) and COPD (60.81) was 13.52 and the population variance (σ2) was 21.42 (Swain et al., 2021). The sample size (n) = 2 (Zα/ 2 + Z [1- β]) 2 × σ 2 /(μ1−μ2) 2 , assuming 0.05 level significance (Z α/2 =1.96), and 80% power (Z [1-β])=0.84) was 39.36 in each group. In this study we will enroll 40 patients in each group. 2 (Zα/ 2 + Z [1- β]) 2 × σ 2 n= (μ1−μ2) 2 2 (1.96 + 0.84) 2 × 21.42 2 n= (60.81-47.29) 2 n=39.36 Swain S, Pothal S, Behera A, Manjhi R, Dutta P, Pradhan G. Treatment outcome among Post TB obstructive airways diseases and COPD: A prospective cohort study. J Family Med Prim Care. 2021; 10(9):3411-3416.
Statistical analysis section is missing	All data are expressed means and standard deviations or

12- Clarification of research proposal entitled ***"Efficacy of laser and ultrasonic activated root canal irrigants in biofilm eradication"*** submitted by Dr. Vineet Gupta, JRI, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 399/Coms7Endo/22 dated 6th December, 2022.

Previous PGTSC Comment	PI response
This is a comparative study	Yes,this is a comparative study
The Control Group should be exclusively defined.	2. The Control group(Group 1) is a No Treatment group. No intervention was given after the culture of biofilm in this group. Biofilm was cultured in Extracted tooth Roots. Group 2: Treated wih Hypochlorite & EDTA Group 3: Treated with Hypochlorite, EDTA and Ultrasonic Activation Group 4: Treated with Hypochlorite, EDTA and LASER Activated . Group 5: Treated with Hypochlorite, EDTA Alexidine dihydrochloride & Ultrasonic activated. Group 6: Treated with Hypochlorite, EDTA Alexidine dihydrochloride & LASER Activated. Group 7: Treated with Hypochlorite, EDTA Octenidine dihydrochloride &

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Ultrasonic Activated. Group 8: Treated with Hypochlorite, EDTA Octenidine dihydrochloride & LASER Activated.
There seems to be more than one treatment group	Yes there are more than one (seven) treatment groups.
The research hypothesis should be stated for comparing more than two groups.	The study is to compare the efficacy of LASER and Ultasonic Activated Root Canal Irrigants in Eradication of Biofilm. The control group(n=20) in which No Treatment was given and Ultrasonic and LASER activated irrigants were used in other 7 treatment groups(n=140) by evaluate the reduction in mean microbial viability by Colony Forming Units(CFU) per ml.
Study design is not mentioned.	The design of the study is Concurent Randomized-Controlled Trials(RCT)
Sample size calculation should be modified according to the appropriate research hypothesis. At present, it is comparing two groups only.	Sample size calculation method: Sample size will be calculated on the basis of bacterial viability of the control group and seven other experimental groups with minimum variation using the formula $n = \frac{(z_\alpha + z_\beta)^2(\sigma_1^2 + \sigma_2^2)}{d^2}$ Where σ_1 = 9893.85, bacterial viability of the control group σ_2 = 106.39 bacterial viability of the experimental group with minimum variation (according to the reference paper "J. Race et al.") d =15% of mean viability (=48892.85), the difference considered to be clinically significant type I error α = 5% corresponding to 95% confidence level type II error β = 20% for

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	detecting results with 80% power of study. So the required sample size is calculated to be $n = 20$ each group
Statistical analysis section is missing.	**Statistical Analysis:** Statistical Analysis is done by calculating the Mean Cell Viat by determining the Colony Forming nits(CFU/ml) amongst all the Groups and the difference was stated using comparison tests. One way ANOVA was applied on quantitative variable to test the hypothesis. Post Hoc Tukeys was applied to note the difference between the respective group at confidence interval of 95% and level of significance at $p<0.05$.

14- Clarification of research proposal entitled ***"A study of lung function parameters by impulse oscillometry and spirometry in COVID-19 survivor patients attending a tertiary care centre"*** submitted by Dr. Ankit Kumar, JRIII, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 1306/22 dated 5th December, 2022.

Previous PGTSC Comment	PI response
Research hypothesis, sample size calculation and statistical analysis section are missing.	This study hypothesizes that patients affected by the COVID-19 infection develop lung function impairment in the post covid period. Sample size was taken as of convenience as it's a Pilot study.
Sample size is by convenience	Due to the scarcity of patients due to the ongoing governmental restrictions for public safety during the data collection period, sampling by convenience seemed a better option. Also it's a pilot study so we incorporated the maximum available subjects during that period.
It seems to be a fit case for PILOT study	It indeed is a pilot study to evaluate the lung parameters of COVID survivor patients in this novel disease entity.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR: Approved
PGTSC Decision: As above

1- Expedited review of the research proposal entitled ***"A study of interoception, self-regulation, self-awareness, mind-body connection & trauma in dissociative disorder"*** submitted by Mr. Amandeep Singh Garaya, M.Phil student under the guidance of Dr. Pooja Mahour, Additional Professor (Clinical Psychology), Department of Psychiatry, K.G's Medical University, U.P., Lucknow vide letter no. 1675/Psy dated 10th November, 2022 & 1832/Psy dated 10th December, 2022.

The above proposal forwarded to reviwers, reply has given both reviewers with following comments:-

First Primary reviewer-

Previous PGTSC Comment	PI response
There should be one primary objective and the rest should be designated as secondary objectives.	The Aim and Objectives of the study have been re-defined. Primary and Secondary Objectives have been included. Please refer Page No. 5
The study variable and parameters should be defined.	Study Variables and Clinical Variables have been identified. Please refer Page No. 5
The primary objective should be converted into a research hypothesis in terms of the study variables and parameters.	Research Hypotheses have been mentioned in terms of Study Variables. Please refer Page No. 6
Sample size calculation is arbitrary. It can only be done after properly defining the research hypothesis.	Sample Size based upon the re-defined Primary Objective and hypothesis has been calculated and mentioned. Please refer Page No. 12
Are the instruments used in the study "Gold	Yes, most instruments are gold standards and widely

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Standards"	used in research. The rationale for selecting the Instruments has been mentioned alongside each instrument. Please refer Pages 7 – 10
Were their validity and reliability checked?	Yes, the reliability and validity of all the instruments were checked, and they were found to have good reliability and validity. Please find the details mentioned on pages 7 – 10
How these tools would be scored to convert into an "aggregate score.	The scoring procedure, including the calculation of Aggregate Score has been mentioned for each instrument. Please refer Page No. 7 – 10.
Statistical section should include the method of scoring these instruments.	The statistical section has been edited and the method of scoring has been added to the description of the tests.

Secondary reviewer-

Previous PGTSC Comment	PI response
In inclusion criteria all adult patients above 18 years with dissociative disorder will be taken	The Inclusion & Exclusion Criteria have been edited accordingly.

(Alok Dhawan)
Chairman, IEC

Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. MED/CT/28/2022 dated 9th November, 2022.

Previous EC Comment	PI response
Section 3(ii) ad 3(iv) is contradictory if Drug has not been approved else were. It is a IND/ND.	Section 3(ii) was inadvertently mentioned "None", I would like to clarify that Study drug (Linaclotide) has been approved in US, Canada, Japan, China and EMA region, however Linaclotide have not been marketed in India yet. Sponsor (Dr. Reddy's Laboratories Limited) is planning to market the product in India. As per Regulatory requirement, sponsor has decided to conduct phase III clinical trial in India. Section 3(iv) The investigational drug has been already approved in other countries however study drug (Linaclotide) has not been approved in India yet. Investigator Brochure copy and DCGI Approval letter had been submitted along with EC dossier. After the Correction Annexure 7 copy attached for the reference.
The total study duration needs to be mentioned.	Total study duration around 16 weeks (4 weeks screening including pre-treatment period, 12 weeks treatment period). We had captured this information in Annexure 07.
Why use direct identifiers?	We would like to clarify that patient confidentiality would be maintained strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note. We will not share any subject related confidential information except for Regulatory Authority requirements.

The reply to above Comments was forwarded and reviewed by PR:-
Second opinion of PR:

- Using direct identifiers is not acceptable.

The reply from PR to the above Comments was forwarded to PI:- Response received from PI which was forwarded to the PR vide this office letter no. 1627/Ethics/2022 dated 19th December, 2022.
Recommendation of PR:-

- Explanation and description of indirect identifiers not acceptable.

3- Clarification of research Protocol no. GLK-2101 entitled ***"A randomized, assessor-blind, placebo controlled, multi center, clinical endpoint bioequivalence study to compare the efficacy and safety of generic fluticasone propionate inhalation aerosol USP 44mcg (Glenmark Pharmaceuticals Ltd) to flovent HFA (Fluticasone propionate inhalation aerosol) 44mcg (GSK Group of Companies) in treatment of patients with bronchial asthma"*** sponsored by M/s Glenmark Pharmaceuticals Ltd. B/2 Mahalaxmi Chamber submitted by Prof. R.A.S Kushwaha, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. RM/CT/07/2022 dated 21st November, 2022.

Previous EC Comment	PI response
PI needs to know the difference between study duration and duration of subject participation.	As per the sponsor study completion date is expected Dec 2023 the study duration is started after the EC approval for KGMU site. Total Study Duration is 04 week per enrolled subject, as per the study design total 07 days is screening period and 14 days is a Run in period and 04 weeks is a treatment period for each enrolled subject in the study.
PI to kindly furnish document by DCGI that states that Direct Identifiers should be used.	As per your valuable comment we would like to clarify that patient confidentiality would be maintain strictly as per guideline through-out the study and we are capturing only subject initials and subject number in the source note and

(Shally Awasthi)

4- Clarification of research proposal entitled AVT06-GL-C01 Version: Version 2.0,21 December 2021 entitled "*A randomized, double-masked, parallel-group, multicenter clinical study to evaluate the efficacy and safety of AVT06 compared with EU-Eylea® in subjects with neovascular (Wet) age-related macular degeneration (ALCOEYE)*" sponsored by M/s Alvotech Swiss AG Thurgauerstrasse submitted by Prof. Sandeep Saxena, Department of Ophthalmology, King George's Medical University, U.P., Lucknow, vide letter no. 1567/OPh/2022 dated 18th November, 2022.

Previous EC Comment	PI response
The Sponsor information in form and DCGI documents is different.	As mentioned in the DCGI Submission letter dated 17 May 2022 ,duly submitted to the Ethics Committee dated .....Kindly note that IQVIA is the CRO applicant and submitted the study details to the DCGI on behalf of the sponsor(ALVOTECH). A Letter of Authorization has been submitted to DCGI. Hence in the DCGI. Approval letter it was addressed to IQVIA. the sponsor name is not mentioned in DCGI letter as CRO IQVIA has submitted the application to DCGI to conduct the CT in India. The sponsor 2 name mentioned in form is correct and same is mentioned in Protocol and DCGI Submission Letter. The Sponsor name and Address is Alvotech Swiss AG Thurgauerstrasse 54 8050 Zurich Switzerland.
What investigations will be done locally?	Below investigations will be done locally- 1. Informed Consent 2. Demographics 3. Medical History 4. Complete physical examination including height and weight 5. Vital Signs 6. 12 Lead ECG 7. Examinations of Eyes (BCVA, IOP, Slit lamp, Indirect Ophthalmoscopy, SD-OCT, Fundus Angiography, Fundus Photography) 8. Urine Pregnancy test 9.Blood Sampling (Hematology, Clinical Chemistry and Urinalyses) Blood will be

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	withdrawn at site i.e locally and processed and will be sent to central laboratory for the results. Local laboratory results are only required in the event that the central laboratory results are not available in time for either study treatment administration and/or response evaluation. If a local sample is required, it is important that the sample for central analysis is obtained at the same time. Additionally, if the local laboratory results are used to make either a study treatment decision or response evaluation, the results must be entered into the eCRF.
What tests and imaging will be done for this study and how will data be transferred securely for central imaging review?	SD-OCT, Fundus Fluoresceine Angiography and Fundus Photography will be performed by using subject ID given by sponsor maintaining confidentiality and securely from certified device the images will be transferred to pendrive and then will be uploaded in imaging portal of central imaging center.
PI Needs to know difference between study duration and duration of subject Participation.	As mentioned in the protocol the total study Duration is 56 weeks for each subject participation. The duration of study depends on the (competitive) enrollment period and the number of subjects enrolled at the site level.
Confidentiality and privacy section not filled.	Confidentiality and privacy section updated in enclosed form.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR:

- Despite pointing out, PI is unable to address the difference between study duration and duration of subject participation needs to be clarified. Subject recruitment cannot go on or ever.

The reply from PR to the above Comments was forwarded to PI:- Response received from PI which was forwarded to PR:-
Recommendation of PR:

- The proposal was discussed in the meeting held at KGMU and comments given.

EC Comment:

- Study Design, Please clarify:

Minutes of 121st IEC Meeting virtually held on 10-02-2023 from 2.00 PM.

A — **Action taken**

1- Clarification of research proposal entitled ***"Effect of vocational rehabilitation in myocardial infarcation patients and returning back to their work after myocardial infarction"*** submitted by Ms. Meenakshi Mishra, Ph.D. Scholar 2019 under the guidance of Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 564/Cardio/Res/2023 dated 19th January, 2023.

Previous EC Comments	PI response
This appears to be a PhD Thesis of 2019 enrollment. It's at least 3 years from enrollment time and research work has not yet been approved.	It is true that my enrollment for the PhD program happened in 2019, dated 30-Oct.,'19.The delay in submission is gratefully acknowledged & is explained as underneath. Please bear in mind that it was around the same time the initial reports of Covid-19 pandemic also started trickling in and we had, by Dec..'19 started masking ourselves etc. which continued as late as March/April 2022. These were extraordinary times when normal lives at the workplace, homes, society, country & at the International level were thrown completely out of gear. What was badly affected was our daily professional lives

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		in the department such as meeting deadlines, patients needs, staggered presence of the personnel etc, tasks which could not be compromised at any costs! Needless to mention, we lost a large number of colleagues & struggled to ensure our living with safety. Despite all the existing dangers & calamities, I continued devoting time to my departmental assignments including my efforts to identify a research proposal with my mentor, Prof. Dwivedi. He was kind enough to provide me time to draw a thumbnail sketch of what we wished to pursue for my PhD program, in spite of the ongoing, unprecedented COVID crisis adversely affecting departmental affairs. Our efforts succeeded when we got the approval for the constitution of the Doctoral Committee on 23 May,'20 before I could begin my mandatory PhD Foundation Course. Subsequent to the approval of Doctoral Committee on 8 Oct.,'21, I submitted my proposal for Ethical Committee (EC) clearance on 13 Oct.,'21 whose meeting was held on 4 Dec.,'21 which suggested some recommendations for modifications/clarifications delivered to me on 22 Dec.,'21. Only after the final result of my PhD Foundation Course, I was technically eligible for reviewing and rewriting my proposal as per EC comments and resubmitted to EC on 24

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	appreciate your help and consideration.
Can a PhD candidate be called PI?	Yes, a PhD candidate can be called PI for their research proposal. Since a PhD candidate will be responsible for their review of literature, gathering of data & its collation under the guidance of their mentor, results, conclusions drawn from the study etc., this seems to be logical.
The PI mentions in section 10 that the risks are unreasonable, when compared to benefits, to conduct this study. Thus, the research is unethical and cannot be approved.	I tender my humble apologies for the error that has crept into my inadequate expression of the risks & benefits issues. There would be minimal risk(s) involved with the patient's visits to the department since they have to commute plus they would be exposed to other patients in the department when they visit for follow ups. However, these risks are 'minimal' considering the benefits that would be derived from conducting the study. We are simply collecting the data, organizing it properly, deriving our results & concluding the study etc. which should be of immense help to the scientific community in general as well as to the patients in particular.

The above Comment forwarded to PI was reviewed by PR vide this office letter no. 1931/Ethics/2023 dated 20th January, 2023.

Recommendation of PR:

- No statistical plan is mentioned.
- The revisions mentioned in the table have not been incorporated into the proposal.
- I don't think that 15 patients will be good enough to tease out the difference in the 2 groups.
- Computer based randomization is not a type of randomization.
- The fact that Heathify. Me is an Indian app doesn't justify the privacy issues, Multiple other issues.
- Would suggest that another Committee member reviews it.

EC Comment:

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Kindly correct the title of the proposal. **EC Decision:** Approval subject to modification, give responses in a tabular format. ***Ref: code: 113th ECM IIB-Ph.D/P3***
2-	Clarification of research proposal entitled "***Identification and characterization of novel molecular biomarkers with prospects of targeted drug therapy development in pediatric B-Cell acute lymphoblastic leukemia (ALL) with diverse genetic subgroups***" submitted by Dr. Nishant Verma, Additional Professor, Department of Pediatrics, King George's Medical University, U.P., Lucknow vide letter no.146/Ped/2023 dated 11th January, 2023.

Previous EC Comments	PI response
Bio-Banking will be done. This has not been mentioned in the consent form.	The consent and assent forms have been revised to include this point.
Where the consent form is also that bio-banking will follow the Institutional IPR policy for out cases of bio-banking.	The consent and assent forms have been revised to include this point.

The above Comment forwarded to PI was reviewed by PR vide this office letter no. 1930/Ethics/2023 dated 20th January, 2023.
Recommendation of PR:

- The IEC number and title of the submitted proposal and one given in checklist don't match.

EC Decision: Approved

	Subjects data shared by each site.
While undertaking by principal investigator indicates that it is a multicentric international study, the name and address of other medical institutes/Hospital is missing.	Physicians- Dr Mahesh PA (Mysore), Dr B V Murali Mohan (Bangalore), Dr Deepak Talwar (Noida), Dr Surya Kant Tripathi (Lucknow), Dr Parthasarathi Bhattacharyya (Kolkata), Dr Nandagopal Velayuthaswamy(Coimbatore),Dr Jaymohan Unnithan (Coimbatore), Dr Srikanth Krishnamurthy(Coimbatore), Dr Nagarajan Srinivisan (Coimbatore), Dr Saibal Moitra (Kolkata), Prof. (Dr) Sajal De, (Chattisgarh), Dr Lancelot Pinto (Mumbai), Dr Suhas Bardapurkar (Aurangabad), Dr Harshavardhan Vhora (Baramati), Dr Syed Tousheed (Bangalore), Dr Suma P Kumar, (Bangalore), Dr Atri Gangopadhyay, (Jharkhand) Dr V. Nagarjuna Maturu (Hyderabad), Dr Saili Bendre (Mumbai), Dr Vivek Vardhan Veerapaneni (Hyderabad), Dr Rahul Sharma (Noida), Dr Ragini Diwan (Kolhapur), Dr P Arjun (Trivandrum), Dr Swati Behera Sharan (Jharkhand), Dr N.K. Kalappanavar (Karnataka), Dr Nirupam Sharan (Jharkhand) Paediatricians- Dr Indu Khosla (Mumbai), Dr Ilin Kinimi (Bangalore), Dr Sagar Warankar (Mumbai), Dr Sainath Powar (Kolhapur), Dr. Rashmi Kapoor (Kanpur).
In executive summary the methodology indicates following locations in India as well as from international countries but neither any Indian nor foreign Centre is Mentioned.	The protocol shared by ARISE to team KGMU does include details of the other investigators. However kindly refer to the link for all members who are registered as this will keep changing as and when Investigators register.
The methodology selection further states that data will be captured at clinics and hospitals while study Centre (in material and methods) indicates only KGMU. Kindly resolve the discrepancy.	Physicians- Dr Mahesh PA (Mysore), Dr B V Murali Mohan (Bangalore), Dr Deepak Talwar (Noida), Dr Surya Kant Tripathi (Lucknow), Dr Parthasarathi Bhattacharyya (Kolkata), Dr Nandagopal Velayuthaswamy(Coimbatore), Dr Jaymohan Unnithan (Coimbatore),

10- Clarification of research proposal entitled *"Effect of dopamine as VEGF antagonist on progression of sepsis to septic shock, ALI (acute lung injury) and AKI (acute kidney injury)"* submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 349/CCU/2022 dated 30th December, 2022.

Previous EC Comment	PI response
To mention the incidence of septic shock ALI/ AKI in severe sepsis and how much reduction is anticipated? Sample size to be mentioned accordingly.	Six million cases annually in world. One third reduction is expected.
Proper patient information sheet needs to be attached both in English and Hindi.	Attached
The aim indicates estimation of VEGF levels, while no biological samples will be collected as per the submission- How will	Methodology is revised and being submitted. Blood sample is collected for this study.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

assess of VEGF levels be made. As there is no co-investigator other than Department of anaesthesiology where will this VEGF be estimated and how? Also all relevant lab work on such patients may be mentioned in methodology section.	
How will the third aim be assessed i.e. survival benefit? Whether it would be a short-term survival benefit or long-term survival outcomes? What data will be collected in this regard?	Short term Survival benefits will be assessed by three month morality.
A part from describing the methodology in detail also attached the data collecting sheet/ protocol to support the aims and objectives.	Attached
If no biological specimen is to be obtained then what is the role of cytogenetic lab?	Blood sample will be collected.
What will be the dosing schedule of dopamine? Will it be over and above of routine clinical requirement- if yes, then what will be the anticipated adverse effects that further needs to be mentioned in informed consent form?	Dopamine 2-4 mcg/kg/minute. it will be above clinical requirement of the patient and mild tachycardia is anticipated advert event.
The project needs to be re-written with the literature, review, methodology, anticipated data, outcomes and statistical analysis according to all the three aims and objectives.	Done.

The reply from PI to the above Comments was forwarded to PR:-
Recommendation of PR:

- Although sample size calculation is submitted, it still needs to be elaborated in terms of specific objective & a proper reference of earlier study needs to be mentioned.
- Not complied. Patient information sheet need to be submitted both in English & Hindi as per SOP.
- Methodology grossly incomplete in relevance to objectives, The CO PI for cytogenetic lab needs to be mentioned. It has to be made clear if the work has to be done in CFAR KGMU or outsourced, in letter case mention the place/opening.
- Needs to be detailed in methodology. Methodology needs to be mentioned in PICO format to make it better. The population aspect is satisfactory but intervention, comparison & outcome categories need to be elaborated.
- Apart from describing the methodology in detail also attach the data collecting

(Alok Dhawan)
Chairman, IEC

vide letter no. OMSD/182/23 dated 2nd February, 2023.

Previous EC Comment	PI response
What is the need for direct identifiers?	Study involves indirect identifiers. Sample population will be coded in alphabetical order for data recording. Changes have been made in the ethical form.
Efficacy measures are not mentioned.	Efficacy measures are added in the study proforma.
Sample size calculation is not correct.	Corrections have been mad and revised in the proforma.
Case record format is not attached	Case record format has been attached.
As this is an intervention study, and adverse effects can happen, needs to be reported, compensation should be accounted for.	Patch test will be done for every individual before injecting lignocaine to prevent allergic reactions. Nerve palsy after injecting lignocaine will be rare, if oocurs will be transient and resolves on its own. Injection site infection, if occurs will be maganged with appropriate antibiotics. As lignocaine injection is already being used for diagnostic purpose in Temporomandibular disorders, no serious events has been reported in literature till date.

The comments forwarded to PI was reviewed by PR :-

Recommendation of PR:-

- There are 4 groups of patients: Patients who will not have effect of Lignocaine, MPDS, ID, ID+MPDS.
- Measurements are made at 4 time points.
- A difference to detect a difference of 1.3% (of what?) will be detected in 20 patients.
- I don't think this is feasible.
- Outcome measure will be what type of measurements: N/O/I/R?
- Why will direct identifiers be used?

EC Comment:

- As above

EC Decision: Approval subject to modification, give responses in a tabular format.

Aims & Objectives	Seroprevalence of HBsAg in women at reproductive age. To study virological profile of reproductive age group of females. To study the spectrum of liver disease severity in reproductive age group of females.
Study Design	In this project we will examine the seroprevalence of hepatitis B surface antigen (HBsAg) prospectively and retrospectively, in the women at reproductive age living in different district of Uttar Pradesh, India.
Methodology	This is a retrospective and prospective study, in which we will examine the seroprevalence of hepatitis B surface antigen (HBsAg), hepatitis Be antigen (HBeAg), antibody to hepatitis B e antigen (anti-HBe) and Serum HBv-DNA will be calculated using a sensitive, commercially available, quantitative PCR assay in the women at reproductive age who are living in different districts of Uttar Pradesh, India. We also access the spectrum/stages of liver disease with the investigation by USG Abd, Fibroscan, and other non-invasive Investigations. This study was carried out in the department of Medical Gastroenterology KGMU, in collaboration with the Dept of Gastroenterology, SGPGIMS Lucknow, India.

16- Clarification of research proposal entitled "***24 hour glucose profile and beta cell function in women with early gestational diabetes mellitus***" submitted by Prof. Amita Pandey, Department of Obstetrics & Gynecology, King George's Medical University,

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

U.P., Lucknow vide letter no. OG/3701/2022 dated 19th January, 2023.

Previous EC Comment	PI response
There are too many primary objectives. There should be one primary objective. The rest should be included into secondary objectives.	Primary objective 1- To study 24 hour glucose profile in women diagnosed with GDM in early pregnancy using the WHO 2013 criteria and compare with women of similar gestational age with normal glucose tolerance. Secondary Objectives 2- To assess beta cell function in women with early GDM 3- To assess maternal and fetal outcomes in women diagnosed with GDM in early pregnancy
After identifying the study variables and study parameters, the objective should be converted into research hypothesis in terms of the study parameters.	Hypothesis: Gestational Diabetes Mellitus (GDM) in early pregnancy is associated with high glycemic variability in comparison to pregnant women with similar gestational age with normal glucose tolerance.
Study design is mentioned as prospective case control study. Case control study is retrospective.	For the primary objective it is a cross-sectional case control study.
Sample size calculations are missing.	Sample size was mentioned in the protocol. It was calculated as 201 with the assumptions of prevalence of early GDM as 38% (data from AIIMS, New Delhi) and 7% margin of error of prevalence at minimum 95% CI. Considering 10% loss to follow up, the size was calculated as 221. We will screen 221 pregnant women <20 weeks to get adequate number of GDM and controls
Statistical analysis section is very general. It should be specific to the research hypothesis.	SPSS version 25.0 will be used for data analysis. All variables will be tested for normality using the Shapiro–Will test, Continuous

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			variables with normal distribution will be presented as mean ± SD. while not normally distributed data will be expressed as median values with their interquartile ranges (IQRs) (25th–75th quartiles) Categorical data will be expressed as counts and percentages. The baseline maternal demographic, clinical and biochemical characteristics of the study group will be compared using ANOVA followed by Tukey (normally distributed parameters) or Kruskal–Wallis followed by Dunn's (for not normally distributed parameters) as appropriate. All outcome measures of glycemic metrics derived from the data from CGMS (AUC, IQR, SD. and amplitude), hourly median values and percentages of time spent in range (blood glucose value 70-180 mg/dl), time in hyperglycemic range (blood glucose vale >180 mg/dl) or time in hypoglycemic range (<70 mg/dl) within the glucose ranges will be compared using Kruskal–Wallis, followed by Dunn's correction. P value < .05 will be considered significant.

(Alok Dhawan)
Chairman, IEC

	to be mentioned before hand	section.
	EC comment 7 The study procedure in consent form need to be elaborated in terms of ruling of lung diseases apart from dysplasia /malignant changes.theree area well known remote complications of HBOT .these need to be explained to the patient.	Remote complications added in patient consent form
	EC comment 8 Methodology need to be elaborated a) what is the inclusion criteria specially age b)what pre-therapy investigations need to be carried out c)How will the improvement in mouth opening be judged d)what will be the criteria of declaring significant subjective improvement in spicy food tolerance e)what will be the duration of follow up period	1. Inclusion criteria • Age less than 65 year • Oral sub mucous fibrosis with mouth opening less than 25 mm 2. Pre therapy investigations • In pre-treatment investigations, ophthalmology, ENT and pulmonary clearance will be done to exclude any related pathology 3. Change in mouth opening will be assessed by a surgical scale from upper incisor edges to lower incisor edges during pre-treatment and after treatment. 4. Symptomatic improvement will be assessed by improvement in quality of life. 5. Patient will follow up in duration of after 1 week of every cycle of HBO therapy to monitor results of therapy and any side effects, up to 1 year.

I-	ADR of research proposal entitled ***"Indian trial of Tranexamic acid in Spontaneous intracerebral haemorrhage (INTRINSIC TRIAL)*** submitted by Dr. Praveen Kumar Sharma, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter no.445/Neuro/22 dated 14th December, 2022 &

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

607/Neuro/22 dated 15th December, 2022.

Patient ID & age and gender: S-45-3-307/59 years/Male
Patient Diagnosis: Right Ganglio-capsular intracranial bleed with mass effect with IVE Hypertension.

Patient enrollment date: 18.11.2022
Patient follow up under study-Expired on 21-11-2022 during hospital stay.
Follow up visit completed-Expired
Planning on visit- 6th Month
SAE detected on date: 21-11-2022
Follow up visit remaining: Expired
24 hours, notified to EC, Sponsor-Yes
14 days analysis report submitted to EC-NA
Subject History:

Subject S.P.M.59 years/Male, known case of CAD post PTCA and Hypertension, admitted on 18th November, 2022 in the Emergency medical ward with c/o left hemiparesis and altered sensorium with GCS score of 7 and diagnosed to have right intracerebral (Gangliocapsular) bleed, volume approximately 50.9 ml. Since, he was fulfilling inclusion criteria so he was recruited after written informed consent from family and randomized to experimental arm and received tranexamic acid (2 gm I/V bolus). He was kept in emergency medical ward ICU had received treatment with parenteral antihypertensive to lower blood pressure, decongestive therapy (Inj Mannitol) and intravenous fluids but his GCS score dropped to 4 at about 2 pm so he underwent elective intubation and repeat NCCT head which showed haematoma expansion(volume approx, 64.4 ml). Subsequently, he was on ventilator support and neurosurgery opinion was taken who advised for surgery, but family members gave negative consent. So, he was continued on medical treatment. His deteriorating condition was related with haematoma expansion and treatment options and prognosis were discussed with the family members. He continued same state and by next day his GCS score dropped further to 3. The NCCT head at 24 hours after admission showed further expansion of haematoma volume (67.5 ml). Further, His blood pressure started falling so mannitol was stopped and he was put on initially single and later double ionotropic support due to falling blood pressure. He suffered a cardiac arrest, was given CPR but could not be revived and declared dead at 2.01 pm on 21.11.2022. The immediate cause of death was supposed to be large intracerebral bleed and its complications only.

Recommendation of Primary reviewer:

- The subject was enrolled on 18th November, 2022 when the subject was brought to the hospital with intra-cerebral bleed.
- SAE occurred on 21st November, 2022 during the same admission as recruitment due to expansion of intra-cerebral hematoma and non-consent of LAR to allow surgery.
- SAE doesn't appear to be related to the study but due to the expanding intra-cerebral hematoma perse.

	ADR sub Committee Comment: • No casual association & no compensation required. **ADR sub Committee Decision:** Noted ***Ref. code: 115 ECM IIA/P5***
2-	ADR of research proposal entitled ***"Indian trial of Tranexamic acid in Spontaneous intracerebral haemorrhage (INTRINSIC TRIAL)*** submitted by Dr. Praveen Kumar Shukla, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter nos. 535/Neuro/22 dated 22nd October, 2022 & 550/Neuro/22 dated 2nd November, 2022. **Patient ID & age and gender:** S-45-3-121/40 years/Male **Patient Diagnosis:** Left Ganglio-capsular intracranial bleed with mass effect with IVE Hypertension. **Patient enrollment date:** 07.10.2022 **Patient enrollment date-**Intervention **Patient follow up under study-**Yes **Follow up visit completed-**No **Planning on visit-** Yes **SAE detected on date:** 20-10-2022 **Follow up visit remaining:** Yes (90) **24 hours, notified to EC, Sponsor-**Yes **14 days analysis report submitted to EC-**No**Subject History:** Subject A.G.40 yrs/Male, know case of Diabetes Mellitus Type-2, Hypertension, admitted on 07.10.2022 in the Emergency medical ward with c/o right hemiparesis and altered sensorium diagnosed to have right intracerebral (Gangliocapsular) bleed, volume approximately 50 ml. He was randomized to experimentalarm and received tranexamic acid (2 gm I/V bolus). He was transferred to Neurology stroke ward on 08.10.2022 and received treatment with Inj. Mannitol, Intravenous Fluids, Inj Piperacillin+tazobactam (due to raised counts on CBC) and Insulin for blood sugar management. He gradually improved and started accepting orally continued to have motor aphasia. The nasoganstric tube and indwelling catheter were removed on eighth day of admission and he was discharged on 10th day (17.10.2022). As per the family members he remained fine for one day at home subsequently from 19.10.2022 his oral intake started decreasing and he became drowsy, his urine output also decreased, and he became developed anuria next day, so we were contacted by the family members so, Patienwas called for readmission. Now, he has been diagnosed as sepsis with shock with acute renal injury. He is currently under treatment. ***Recommendation of Primary reviewer:*** • SAE (Hospitalization due to drowsiness and anuria and sepsis) is likely due to disease outcome (Left Ganglio-capsular intracranial bleed with hypertension and

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	T2DM) and not due to intervention (inj. Tranexamic acid ,IV ,bolus) as patient was randomized in treatment arm on 07-10-2022 and SAE occurred on 19-10-2022,almost 10 days have elapsed after taking intervention, therefore SAE seems not to be related to intervention. • Causal relationship can not be established and no compensation is required as patient was properly treated in hospital and discharged on 01-11-2022 in improved state with the instructions to come to OPD after 2 weeks for review. • (Document /Email regarding, notification to EC within 24 hrs. is not attached). **ADR sub Committee Comment:** • Causal relationship can not be established and no compensation is required as patient was properly treated in hospital and discharged on 01-11-2022 in improved state with the instructions to come to OPD after 2 weeks for review. **ADR sub Committee Decision:** Noted ***Ref. code: 115 ECM IIA/P5***
3.	ADR of research proposal entitled ***"Comparision of the efficacy of a 7 day versus a 14 day course of Intravenous antibiotics in the treatment of uncomplicated neonatal bacterial sepsis: a randomized controlled non inferiority trial"*** submitted by Prof. Mala Kumar, Department of Paediatrics, K.G`s Medical University, U.P., Lucknow vide letter no. 2787/Ped/22 dated 10th November, 2022 preliminary email dated 11th Oct, 2022 at 2:14 PM.. **Patient ID & age and gender:** 0621/1 month and 1 day/male **Patient Diagnosis:** 28-30 week premature very low birth weight (VLBW0 baby with respiratory distress syndrome (RDS) and early onset sepsis (EOS) **Patient enrollment date:** 08-10-2022 **Patient enrollment in arm**-14 day trial arm **Patient follow up under study**-35 days **Follow up visit completed**-19-11-2022 **Planning on visit**- Still hospitalized **SAE detected on date:** 23-10-2022 **Follow up visit remaining:** 17 days **24 hours, notified to EC, Sponsor**-29-10-2022 **14 days analysis report submitted to** EC-09-11-2022 **Subject History:** The neonate was 28:30 weeks premature appropriate for gestational age with very low birth weight (1200gm). Baby was suspected of respiratory distress syndrome (RDS) with early onset sepsis (EDS), Baby was started on bubble CPAP and given surfactant. Antibiotics Ampicillin BD and Gentamysin OD were started from 8th October to 10 October and then from 10 October onwards on Amikacin OD (after blood culture sensitivety was available). After completion of 7 days of sensitive antibiotic

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	administration baby was well and then we randomized. Randomization came to be in 14 day trial arm. The last dose of Amikacin was given on 22nd October, 2022. The next day baby became lethargic and had gastric haemorrhage. Sepsis screen was sent on 23rd October, 2022 which turned out to be negative (CRP = 0.59), blood culture sample was misplaced and CSF examination was normal. Piptaz was started from 23rd October, 2022 but condition did not improve. Hemoglobin (Hb) also dipped to 8.8 g/dL so PRBC transfusion was done on 24 October after which Hb improved to 13.2g/d/L. Repeat CRP was sent on 26th October, 2022 which turned out positive with value of 13.32. Blood culture sample was sent on 27th October which came sterile on 30th October, 2022. One more transfusion of PRBC was done on 28th October. However due to clinical deteoration in the form of Respiratory distress from 27th October, 2022 antibiotics were upgraded to Meropenem and the next day Vancomycin was also added. Baby was put on NIV mode of ventilation on 28th October, 2022. On 2 November, 2022 repeat CSF examination was normal and CSF culture came sterile on 4 November, 2022. Baby gradually improved and at present is stable on room air and mother's breast feed (MBF) with ongoing antibiotics. ***Recommendation of Primary reviewer:*** • SAE (continued hospitalization due to lethargy and gastric hemorrhage) is likely due to disease outcome (LBW with Sepsis and Respiratory distress syndrome) and not due to intervention (parenteral antibiotics) as patient was enrolled on 08-10-2022 and randomized in 14 day trial arm and after 7 days of parenteral antibiotics baby was well. SAE was detected on 23-10-2022 after completion of parenteral antibiotic (Amikacin) course (i.e. on 22-10-2022).Patient has received transfusion of PRBC two times (on 24th and 28th October) due to low Hb levels .Patient is still in hospital and under treatment due to deterioration of his clinical condition ,which is now stable. • Causal relationship can not be established and as patient is still in hospital at the site and getting proper management and is gradually improving and presently is stable on room air and mother's breast feed, so no compensation is required. • (Document/Email regarding, notification to EC within 24 hrs. is not attached). **ADR sub Committee Comment:** • Causal relationship can not be established and as patient is still in hospital at the site and getting proper management and is gradually improving and presently is stable on room air and mother's breast feed, so no compensation is required. **ADR sub Committee Decision:** Noted ***Ref. code: 100 ECM IIA/P6***
4.	ADR of research proposal entitled ***"A multicenter, single arm, open label,phase 4 study to evaluate the safety and efficacy of Vedolizumab in Indian patients with Ulcerative Colitis and Crohn's disease"*** submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, K.G's Medical University, U.P., Lucknow vide letter no. 2214/Med/22 dated 26th November, 2022.

Follow up visit remaining: Yes (90 days)
24 hours, notified to EC, Sponsor-Yes
14 days analysis report submitted to EC-NA

Subject History:
A letter was received in the office of the Ethics Committee on 15th December, 2022 vide letter no.445/Neuro/22 dated 14th December, 2022 by PI, the subject RS, 50 years/Male, known case of hypertension, dyslipidemia not on medication presented with complaint of slurring of speech as well as right upper and lower limb weakness. System onset was at 11.00 AM on 5th December, 2022 and the patient was admitted at 12:41 PM in neurology emergency. At presentation, the heart rate was 65 BMP, BP was 191/122 and GCS was 15 and diagnosed to have left basal ganglia bleed with a volume of approximately 5.09 ml. Since he was fulfilling inclusion criteria so he was recruited after written informed consent from family and randomized to the intervention arm received tranexamic acid (2gm I/V bolus). He was kept in neurology and received treatment with antihypertensive to lower blood pressure. He was discharged on the 6th day (10/12/2022). As per family members. He remained fine for one day at home later the patient developed chest pain and pain radiating to left forearm since one hour. ECG suggestive of Inferior wall MI associated with Right ventricle infarction. Patient was admitted immediately to Cardiology ICU on 12th December, 2022. Conservative management was followed and patient is stabilized on 12th December, 2022. He is currently under treatment.
Also, A letter was was received in the office of the Ethics Committee on 15th December, 2022 vide letter no.607/Neuro/22 dated 15th December, 2022, which in mention by the PI the subject was recovered completely from the event which had been reported to you and he is being discharged on 14th December, 2022. His discharged summary and a copy of the resolution are attached with this letter.

After that, A letter was received in the office of the Ethics Committee on 3rd January, 2023 vide letter no.01/Neuro/23 dated 3rd January, 2023 by PI. The subject was discharged from the PI side on 10th December, 2022 and his further follow-up is due on 5th March, 2023 (90th day visit). As per his proxy on today (27-12-2022) his mRS& GCS is 3 and 15 respectively with distal weakness of right upper limb and able to walk without assistance. On 12th December, 2022, patient developed chest pain, ECG suggestive of inferior wall MI associated with right ventricle infarction for which the PI had reported to EC. On today's follow-up he has been advised to continue medication. The PI shall

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

update the EC further about his health after following him up on the above said date.

Recommendation of PR:-

SAE (Hospitalization due to chest pain) is likely due to disease outcome (CVA Hemorrhage with Rt. Sided hemiparesis with Inferior wall / Rt. Ventricular / Posterior wall MI) and not due to intervention (inj. Tranexamic acid ,IV ,bolus) as patient was randomized in treatment arm on 05-12-2022 and SAE occurred after one day i.e. on 12-12-2022.

Causal relationship can not be established. SAE is unlikely related to Intervention as Pt was discharged just one day back (10-12-2022) after getting treatment for Left basal ganglia bleed and was again admitted in hospital (12-12-2022). As he was given proper treatment after admission and was discharged on 14th December after complete recovery ,therefore no compensation is required .

(Document /Email regarding , notification to EC within 24 hrs. is not attached)

ADR sub Committee Comment:

- Causal association not established no compensation required.

ADR sub Committee Decision: Noted

Ref. code: 115 ECM IIA/P5

6. ADR of research proposal entitled ***"Comparision of the efficacy of a 7 day versus a 14 day course of Intravenous antibiotics in the treatment of uncomplicated neonatal bacterial sepsis: a randomized controlled non inferiority trial"*** submitted by Prof. Mala Kumar, Department of Paediatrics, K.G's Medical University, U.P., Lucknow vide letter no. 3190/Ped/2022 dated 23rd December, 2022.

Patient ID & age and gender: 0621-132/1 year and 2 month/Male

Patient Diagnosis: Prematurity with appropriate for gestational age with low birth weight with respiratory distress syndrome with perinatal asphyxia with neonatal hyperbilirubinemia with early onset sepsis.

Patient enrollment date: 25 September 2021

Patient enrollment in arm-7 Day trial Arm
Patient follow up under study-35 days
Follow up visit completed-11-11-2021
Planning on visit- Discharged
SAE detected on date: 17-10-2021
Follow up visit remaining: 0 days
24 hours, notified to EC, Sponsor-30-11-2022
14 days analysis report submitted to EC-30-11-2022

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

SAE term: Sepsis (Pneumonia)
Course of event: Randomization in NICU
Causality: No
Outcome: Discharged

Subject History:

A letter was received in the office of the Ethics Committee on 23rd December, 2022 vide letter no.3190/Ped/2022 dated 23rd December, 2022. The PI informed to the EC that the baby was admitted with above mentioned complaints. Patient was managed with ventilator support, warmer care, vital monitoring, iv antibiotics and ionotropes. Patients were intubated 1/v/o low GC, bradycardia and poor respiratory efforts. Relevant investigations were sent. First sepsis screen came out to be negative but 1/v/0 clinical deterioration repeat sepsis screen was done which came out to be positive. Blood culture was sterile; iv antibiotics were added and upgraded a/t culture sensitivity. Swab for respiratory viruses were sent which was positive for RSV. During the course of hospital stay patient condition improved and ventilator support was gradually weaned off. Currently baby is hemodynamically stable, maintaining saturation on room air, taking MBF well, passing stool and urine normally, antibiotic course has been completed, therefore being discharged with advise to follow up in pediatric OPD on Wednesday after taking prior appointment on ors.gov.in

Recommendation of PR:-

SAE (hospitalization) is likely due to disease outcome (LBW with Sepsis and Respiratory distress syndrome) and not due to intervention (parenteral antibiotics) as patient was enrolled on 08-10-2022 and randomized in 14 day trial arm and completed follow up visit ,after 14 days of parenteral antibiotics baby was well. SAE was detected on 23-10-2022 after completion of parenteral antibiotic course(i.e. on22-10-2022). Patient is now hemodynamically stable, maintaining saturation on room air and antibiotic course has been completed, therefore being discharged with advice to follow up in pediatric OPD.
Causal relationship can not be established and as patient was given proper management and was gradually recovered and was stable on room air and mother's breast feed and therefore being discharged, so no compensation is required. (Document /Email regarding , notification to EC within 24 hrs. is not attached)

ADR sub Committee Comment:

- Causal relationship can not be established and as patient was given proper management and was gradually recovered and was stable on room air and

	mother's breast feed and therefore being discharged, so no compensation is required. **ADR sub Committee Decision:** Noted ***Ref. code: 100 ECM IIA/P6***
7	ADR of research proposal entitled ***"Indian trial of Tranexamic acid in Spontaneous intracerebral haemorrhage (INTRINSIC TRIAL)*** submitted by Dr. Praveen Kumar Shukla, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter no 4414/ neuro/ 22 dated 14-12-2022 & 651/Neuro/22 dated 30th December, 2022. **Patient ID & age and gender:** S-45-3-376(VK)/45 years/Male **Patient Diagnosis:** Left basal ganglia bleed with intraventricular extension with hypertension. **Patient enrollment date:** 26-11-2022 **Patient enrollment arm**-Control arm **Patient follows up under study**-Yes. **Follow up visit completed**-No **Planning on visit**- Yes **SAE detected on date:** 09-12-2022 **Follow up visit remaining:** Yes **24 hours, notified to EC, Sponsor**-Yes **14 days analysis report submitted to EC**-NA **Subject History:** A letter from the PI of the project was received in the office of the Ethics Committee on 15th December, 2022 vide letter no. 444/Neuro/22 dated 14th December, 2022. It was revealed that the subject VK, 45 years/Male, a known case of hypertension, was on irregular medication and presented with a complaint of weakness of the right upper & right lower limb and sudden onset altered sensorium admitted on 26th November, 2022 in the Emergency medical ward with GCS score of 14. He was diagnosed to have a left basal ganglia bleed with an intraventricular extension volume of approximately 16.84 ml. Since he was fulfilling inclusion criteria so recruited after obtaining written informed consent from the family and randomized to the control arm. He was kept in the emergency medical ward ICU had received treatment with parenteral antihypertensive to lower blood pressure, later the patient was diagnosed with Hepatitis B via HbsAg surface antigen test on ELIZA. This infection is unrelated to treatment protocol and the patient wasn't previously aware of his status. On admission, routine labs reported hepatitis B rapid antigen test positive. Since the sensitivity and specificity of this test is low, hence ELIZA testing was done. The report arrived on 9th December, 2022. Gastroenterology and

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

medicine reference have been done. Antiviral therapy has been initiated.

After that, a letter was received in this office on 30th December, 2022 vide 651/Neuro/22 dated 30th December, 2022. It was informed by the PI that subject VK was discharged from his side on 10th December, 2022 and his further follow-up is due on 5th March, 2023 (90th day visit). As per his proxy on today (27th December, 2022), It is observed that his mRS & GCS is 4 and 15 (E4V5M6) respectively with residual right hemiparesis and unable to walk and attend to his own bodily needs without assistance. This patient was diagnosed with hepatitis B positive on 9th December, 2022 for which PI had reported to EC. On today's follow-up, he has been advised to continue follow-up and treatment for hepatitis B at medical gastroenterology. The PI shall update you further about his health after following up on the above-said date.

Recommendation of PR:-

SAE (Hospitalization) is likely due to disease outcome (Left basal ganglia bleed with IVE hypertension) and Hepatitis B infection and not due to intervention, as patient was enrolled in control arm on 26-11-2022.

Causal relationship can not be established and no compensation is required as patient was properly treated in hospital for complication and Hepatitis B infection which was detected on 09-12-2022 and was unrelated to protocol. He has been advised to continue follow up.

(Document /Email regarding , notification to EC within 24 hrs. is not attached)

ADR sub Committee Comment:

- Causal relationship can not be established and no compensation is required as patient was properly treated in hospital for complication and Hepatitis B infection which was detected on 09-12-2022 and was unrelated to protocol. He has been advised to continue follow up.

ADR sub Committee Decision: Noted

(Alok Dhawan)
Chairman, IEC

	been furnished by the PI. **ADR sub Committee Comment:** • No reason for the elevated INR has been furnished by the PI. **ADR sub Committee Decision:** Noted ***Ref. code: 102nd ECM IIA/P24***
2-	ADR of research proposal entitled ***"International study of comparative health effectiveness with Medical and Invasive approaches"*** submitted by Prof. S.K. Dwivedi, Department of Cardiology, K.G's Medical University, U.P., Lucknow vide letter nos.433/Cardio/Res/22 dated 23rd November, 2022 preliminary email dated 11th November, 2022 at 1:26 PM. **Death** **Subject Initial:** S N Y **Subject no.:** 091019-156 **Subject gender:** Male **Patient diagnosis:** Coronary Artery Disease/Chronic Stable Angina **Patient enrollment date**-27-01-2017 **Patient follow up under study**-Randomization visit, Month 1.5, Month 3, Month 6, Month 12, Month 18, every month telephonic Follow up till 5 year. **Follow up visit completed**- Randomization visit, Month 1.5, Month 3, Month, 6, Month 12, Month 18. **Planning on visit**- Telephonic Follow-up visit of month of November, 2022 **SAE detected on date:** 11-11-2022 **Follow up visit remaining:** Telephonic visits (Every Month) till 2025 **24 hours, notified to EC, Sponsor by Email**- 11-Nov-2022 **14 days analysis report submitted to EC**-23-11-2022 **Subject History:** A letter was received in the office of the Ethics Committee on 24/112022. The Principal-Investigator informed that subject was randomized in Conservative Arm of the study. The site person have made a scheduled monthly follow up call to subject on 11th November, 2022 at 11:00 hrs. Subject's LAR informed him that subject passed away on 25th October, 2022 at around 08:00 hrs. LAR informed that subject was feeling down from last few days and had no other major symptoms, on 24th October, 2022 at 21:00 hr. He had taken medicine, skipped his dinner and then slept. Subject did not awaken after that and in morning he found dead. As he was not admitted anywhere, no documents are available and No autopsy was done. *Recommendation of Primary reviewer:*

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• The subject was enrolled on 18th November, 2022 when the subject was brought to the hospital with intra-cerebral bleed. • SAE occurred on 21st November, 2022 during the same admission as recruitment due to expansion of intra-cerebral hematoma and non-consent of LAR to allow surgery. • SAE dose'nt appear to be related to the study but due to the expanding intra-cerebral hematoma parse. **ADR sub Committee Comment:** • SAE doesn't appear to be related to the study but due to the expanding intra-cerebral hematoma parse. **ADR sub Committee Decision:** Noted ***Ref. code: 60th ECM IIA/P13***
3-	ADR of research proposal entitled ***"Digoxin in patients with rheumatic heart disease-a randomized placebo controlled trial*** submitted by Dr. Prof. Rishi Sethi, Department of Cardiology, K.G's Medical University, U.P., Lucknow vide letter no. 556/Cardio/Res/2023 dated 12th January, 2023 & preliminary email dated 3rd January, 2023 at 1:47 PM. **Patient ID & age and gender:** 064/52 year/Female **Patient Diagnosis:** RHD/Mod-MS/MVA 1.3 cm. **Patient enrollment date:** 21-04-2022 **Patient enrollment arm**-Digoxin **Patient follow up under study**-6th Month ,12th Month, 18th Month, 24th Month, 30th Month, 36th Month. **Follow up visit completed**-Enrolment & Baseline Follow-up **Planning on visit**- 6th M **SAE detected on date:** 30-12-2022 **Follow up visit remaining:** 6th Month, 12th Month, 18th Month, 24th Month, 30th Month, 36th Month. **24 hours, notified to EC, Sponsor**-3rd January, 2023 **14 days analysis report submitted to EC**-12-01-2023 **Subject History:** A letter was received in the office of the Ethics Committee on 12th January, 2023 by PI, the subject LAR informed to PI that the subject passed away on 31st December 2022 at 3:00 PM. The subject had complaints of breathlessness and discomfort since the last few days she collapsed at home. Local practitioner was called and he confirmed subject's death. No hospital records are available and no autopsy was done as she expired at home. The PI does not have the exact records to ascertain the cause of death. ***Recommendation of PR:-*** Enrolment date 21-04-2022. 6th month follow up was due in October which was missed. SAE occurred on 31-12-2022 and was reported on 03-01-2023.(late) Clarification may be sought on why the 6 month follow up was skipped and why was the SAE reported late if it was detected on 31-12-2022.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	ADR sub Committee Comment: • Why was 6 month follow-up missed? • Why SAE reported late? **ADR sub Committee Decision:** Noted ***Ref. code: 102nd ECM IIA/P24***
4-	ADR of research proposal entitled ***"Digoxin in patients with rheumatic heart disease-a randomized placebo controlled trial*** submitted by Dr. Praveen Kumar Shukla, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter no. 555/Cardio/Res/2023 dated 12th January, 2023 & preliminary email dated 31st December, 2022 at 12:30 PM. **Patient ID & age and gender:** 003/42 year/Female **Patient Diagnosis:** RHD/Mod-MS/MVA 1.3 cm. **Patient enrollment date:** 21-04-2022 **Patient enrollment arm**-Digoxin **Patient follow up under study**-6th M,12th M, 18th M, 24th M, 30th M, 36th M. **Follow up visit completed**-Enrolment & Baseline Follow-up **Planning on visit**- 6th M **SAE detected on date:** 30-12-2022 **Follow up visit remaining:** 6th M,12th M, 18th M, 24th M, 30th M, 36th M **24 hours, notified to EC, Sponsor**-31st December, 2022 **14 days analysis report submitted to EC**-12-01-2023 **Subject History:** A letter was received in the office of the Ethics Committee on 12th January, 2023 by PI, The PI made many follow-up calls to the patient for a 6 months actual follow-up visit at the site, but the call was not answered as informed by the PI, the subject's LAR came with the patient on 30th December, 2022 with complaints of breathlessness and dyspnoea. The PI also informed to the patient was admitted in the emergency department for stabilization. The patient is currently under observation for the same and there is no definite diagnosis made yet. So, PI is not sure that patient comes under SAE or AE. The PI had informed to the EC that he will provide his detail for the same within 14 days of the window period. *Recommendation of PR:-* • Randomized date 21-04-2022. SAE date 29.12.2022. SAE detected on 30-12-2022. Reported on 31-12-2022. • Date on SAE Narrative (report) is 12-10-2023-it may be corrected. • Subject has skipped the 6 month follow up and reported with SAE on 30-12-2022. • Subject was admitted for treatment and later discharged in a stable condition as

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	per the PI. • SAE doesn't appear to be related to the drug. Clarification/corrections as noted above may be sought. **ADR sub Committee Comment:** • Why was 6 month follow-up missed? • There is a typing error on date, Kindly get it corrected. **ADR sub Committee Decision:** Noted ***Ref. code: 102nd ECM IIA/P24***
II-A	**New Proposal**
1.	Research proposal entitled "***Elucidating mechanisms underlying increased expression and activity of oncogenic kinases and their downstream targets regulating metastasis in breast cancer***" sponsored by CSIR, New Delhi submitted by Prof. M.L.B. Bhatt, Head, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 1372/RT/22 dated 10th December, 2022. ***Recommendation of Primary reviewer:*** • Identify the study variables and population parameters. • Specify one primary objective and club the rest into secondary objectives. • Convert the primary objective into proper research hypothesis using the study variables and population parameters. • What is the study design? • Sample size calculation is missing. • Data management and statistical analysis details are not given • Processing of samples and experimentation shall be done at CSIR-CDRI. (I suppose Dr. Arun Kumar Trivedi shall be assisting in it. He should be from CDRI. It is not mentioned in Role of different co-investigators.). **EC Comment:** • As above **EC Decision:** Revise & Re-submit, give responses in a tabular format. ***Ref. code: 121st ECM IIA/P1***
2.	Research proposal entitled "***Engineering conditionally replication competent SARS-CoV-2 viral molecular clones and evaluation of cross-variant neutralization***" sponsored by CSIR-CDRI submitted by Prof. Avinash Agrawal, Head, Department of Critical Care Medicine, King George's Medical University, U.P., Lucknow vide letter no. DCCM/1092/22 dated 5th December, 2022. ***Recommendation of Primary reviewer:*** • There are three sections: (i) Hypothesis and objectives, (ii) Aim, and (iii) Objective. • Specify one primary objective and club the rest into secondary objectives. • Identify the study variables and population parameters. • Convert the primary objective into proper research hypothesis using the study

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	variables and population parameters. • What is the study design used? • What is the sampling method? • Sample size calculation is missing. In data analysis para, it is mentioned that 100 patients shall be used. Where does this number come from? • Statistical analysis details are not provided. **EC Decision:** Organize a Meeting with PI, Co-PI with Prof. G.G. Agarwal alongwith Prof. Shally Awasthi, Member-Secretary, IEC. ***Ref. code: 121st ECM IIA/P2***
3.	Research proposal entitled "***Study of various parameters and nutrient foramina in talus: A dry bone study***" submitted by Dr. Arvind Kumar Pankaj, Additional Professor, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 461/ANAT/22 dated 16th December, 2022. **EC Decision:** Approved ***Ref. code: 121st ECM IIA/P3***
4.	Research proposal entitled "***Evaluation of the safety and efficacy of ganges water phage therapy in H. pylori related dyspepsia: A randomized controlled pilot-trial***" submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 1430/MED/22 dated 24th December, 2022. **EC Comment:** • People may be drinking Ganga water of their own but to ask them to drink under research settings has ethical issues as there are huge reservations about the quality about potability of Ganga water. • Will the quality of Ganga water for potability tested and how? Bacterial, e coli count and other standard methods. • What will be the source of water? • Patient information is very sketchy and not in Hindi. There is mention of 'Cancer'. Why? • No mention about standard care drugs. • What are the criteria for dyspepsia and relief from it? • Will the study document bacteriophage [quantity and types] in Ganga water. • As cases with only dyspepsia will be included, how the improvement or lack of it will be judged. • Though not major harm is expected, and it may be ethically approved, I have reservations about the study. • The participants should be clearly informed in the brochure that untreated Ganga water will be given and the risk of gastrointestinal and liver infections can not be ruled out. • And this should be monitored before and after [upto 3 months] by pre and post clinical and lab evaluation and data of gastroenteritis should be maintained.

I-A	**Action taken**
1-	Clarification of research proposal entitled ***"Laparoscopic renal surgery: outcome analysis at a tertiary care center"*** submitted by Dr. Nitish Dev, SR, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 794/Uro/22 dated 29th December, 2022.

Previous PGTSC Comment	PI response
Title should be: Assessment of outcomes of Laparoscopic renal surgery.	"Assessment of outcomes of Laparoscopic Renal surgery".
Aims and objective in proper format.	Retrospective review of records (June 2017 to June 2021) to determine the clinical outcome results of all cases who underwent laparoscopic renal surgery for various indications in department of Urology, King George's Medical

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		University, Lucknow and also the data of those patients who will be subjected to laparoscopic renal surgery prospectively from June 2021 to Jan 2023 will be included in analysis of outcome results and complications rate, rate of.conversion from laparoscopic to open surgery and feasibility of laparoscopic radical nephrectomy for>7cm renal tumors.
	Study variables, to defined properly with primary and secondary outcomes.	Primary outcome: To determine rate of conversion from laparoscopic to open surgery. Secondary outcomes: Analysis of outcome results and complications rate feasibility of laparoscopic radical nephrectomy for >7cm Renal tumors.
	Study design is not clear.	Retrospective and Prospective study.
	Sample size and Statistical Analysis is not clear.	The sample size was calculated based on the previous study that reported the prevalence of. Complications of laparoscopic surgery is 6.5%. globally (Elsamra et al 2010) 95% level of confidence and error rate , usually set at 0.05. Total.94 (minimum) patients will be included in this.study. n= Z 2 P(1-P)/d 2 Where • n= sample size • Z=Z statistic for level of confidence, for the level of.confidence of 95% which is conventional ,Z value is.1.96 • P= Expected prevalence of proportion (in proportion.of one ,if 6.5% ,P=0.065) • d= precision (in proportion of one: if 5% d =0.05).

3- Clarification of research proposal entitled ***"A prospective study of grading the complexity of PCNL procedures using " GUY'S STONE SCORE"*** submitted by Dr. Ankush Sadotra, SR, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 84/Uro dated 19th January, 2023.

Previous PGTSC Comment	PI response
The sample size calculation is not given.	The sample size was calculated based on the previous study that reported the prevalence of renal stones was 12% in India (Prakash et.al., 2019; Sofia et.al., 2016), 95% level of confidence and error rate , usually set at 0.05. Total 162 (minimum) patients will be included in this study. $n= Z^2 P(1-P)/d^2$ Where • n= sample size • Z=Z statistic for level of confidence , for the level of confidence of 95% which is conventional ,Z value is 1.96 • P= Expected prevalence of proportion (in proportion of one ,if 6.5% ,P=0.065) • d= precision (in proportion of one: if 5% d =0.05). $n=1.96 \times 1.96 \times 0.12 \times 0.88/0.05^2$ = 162.27 = 162
The detail for evaluating "reliability" and "validity" of "Guy's stone score" is missing.	Many studies has been done to show the reliability and validity of "Guy's stone score". I am quoting a few studies :- 1.Utility of the Guy's Stone Score in predicting different aspects of percutaneous nephrolithotomy (M.Khalil et.al.) 2. Validation of S.T.O.N.E nephrolithometry and Guy's stone score for predicting surgical outcome

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	after percutaneous nephrolithotomy (Nasir Khan et.al.) 3. STONE score versus Guy's Stone Score - prospective comparative evaluation for success rate and complications in percutaneous nephrolithotomy (Ujwal Kumar et.al.)
Has it been validated in Indian?	Yes
Include a Biostatistician as Co-guide	I have included Prof. Vijay Kumar Singh, Deptt. of Community Medicine & Public Health, KGMU, Lucknow as a co-guide in my study.

10- Clarification of research proposal entitled ***"Prospective analysis of pre-operative assessment of duodenal involvement in gallbladder cancer"*** submitted by Dr. Rohit Jain, SR, Department of Surgical Gastroenterology, King George's Medical University, U.P., Lucknow vide letter no. SGE/805/22 dated 18th October, 2022.

Previous PGTSC Comment	PI response
1. Sample size calculation and proper justification.	Sample Size: is calculated on the basis of Daniel sample size formula N= Z 2 P(1-P)/d 2 Were, Z: static for level of confidence =3.96 P: expected prevalence = 0.002 (www.ncbi.nlm.gov/pmc/articles/PMC5473118) d : precision = 5%

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Therefore, N= 3.96*0.002*99.998*10 4 /25 = 316.79 Approximately only 10 % of gallbladder cancer patients are operated (10% of 317=31.7) Therefore 30 subjects will be included in this study.	
	2. In inclusion criteria, it is not clear what the sentence "All patients suspected to have GBC will undergo an ultrasound examination of the abdomen" means.	USG abdomen will be performed in the suspected Gall bladder cancer cases to rule out metastatic disease with Liver nodules and ascites. So that we include only those patients, who do not have metastatic disease.	
	3. Exclusion criteria are not proper.	Revised Inclusion /exclusion criteria Inclusion Criteria- a) > 18 years of age b) Patient undergoing surgery for non- metastatic gallbladder cancer c) Patient who are willing to participate in the study Exclusion criteria-	

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	a) < 18 years of age b) Patient who are unfit for surgery c) Patient with metastatic disease d) Patient unwilling to participate in the study.
4. In the consent form, it is mentioned that.complications will be none, although in the.above line it is mentioned that it is major Surgery. Surgery related complications shall be given.	In the consent form (complication section) there was a typographical error, Surgical complications is added, that will be explained before the consent.

Statistical analysis section is missing.	SPSS latest available version and MS Excel will be use for statistical analysis of the data. The Kolmogorov-Smirnov test will be applied to check whether the data fits normal distribution, Continuous variables conforming to a normal distribution will be expressed as mean ± standard deviation, continuous variables not conforming to normal distribution will be expressed as median and inter-quartile range. Counting data will be expressed as number and percentages. The independent-samples t-test will be used for inter-group analysis of quantitative data such as age, height, weight etc. The $\chi 2$ test will used to compare the proportion data between the groups and the intubation accuracy of the two groups. In all of the statistical analyses, $P<0.05$ will be considered to be statistically significant.

27- Clarification of research proposal entitled ***"A study of cardiovascular hemodynamic assessment in normotensive vs pre-eclamptic pregnancies and its association with maternal outcomes"*** submitted by Dr. Sneha Agarwal, JRI, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no. OG/3706/23 dated 19th January, 2023

Previous PGTSC Comment	PI response
The study variables and study parameters should be identified.	Echo parameters– left ventricular end-diastolic volume (LV EDV), left ventricular end systolic volume (LV ESV),left ventricular systolic mass(LV MS),left ventricular diameter, stroke volume(SV), ejection fraction (EF) will be noted by TTE(Transthoracic echocardiography) using phased array transducer probe placed on patient's chest in left lateral position in 3 different views i.e Parasternal long axis, Apical 4 chamber, Parasternal short axis view. Apical view is also used to measure LV ESV which corresponds to end of T wave on ECG. It is measured from medial annulus then traced along whole of endocardium, before opening of mitral valve. Parasternal short axial view is used to measure LVM in end diastolic phase. Parasternal long axis view is used to measure LVD. It is measured from below level of mitral leaflet to septal endocardial border till posterior border of

(Alok Dhawan)
Chairman, IEC

		endocardium. Serum Pro BNP will be measured using venous blood sample of patients. A minimum of 1ml of blood will be drawn and collected in EDTA vial. BNP level >100pg/ml may be a sign of cardiac failure in any age.
	The aim and objectives should be converted into proper research hypothesis in terms of study parameters. The study design is mentioned as "prospective case control study". Case-control study is retrospective.	**NULL HYPOTHESIS-** There is no difference in the cardiovascular parameters (ECHO and Pro BNP) between normotensive and pre-eclamptic women. **ALTERNATE HYPOTHESIS-** Pre-eclamptic women are more likely to have changes in cardiovascular parameters (ECHO and Pro BNP) than normotensive women. **AIMS AND OBJECTIVES:** • To evaluate cardiovascular parameters using echocardiography(left ventricular end-diastolic volume (LV EDV), left ventricular end systolic volume (LV ESV),left ventricular systolic mass(LV MS),left ventriculardiameter and ejection fraction (EF) and serum pro brain natriuretic peptide(BNP) in normotensive and pre-eclamptic women. • To identify co-relation between serum Pro BNP and cardiac dysfunction in pre-eclamptic women through echocardiographic parameters(LV EDV, LV ESV,LV MS,LVDand EF). • To study the association of echocardiographic parameters and serum Pro BNP with maternal outcome (Pulmonary edema, cardiac failure, DCMP,mortality) in normotensive and pre eclamptic women The study design is "Prospective cohort study".

		Group 1 - 1. Women with pre-eclampsia with gestational age >=34weeks 2. Age 18 – 45years 3. Singleton pregnancy 4. Patient giving consent for the enrolment in the study Group 2 1. Normotensive women with matched gestational age. 2. Age 18 – 45years 3. Singleton pregnancy 4. Patient giving consent for the enrolment in the study
	The sample size calculation is arbitrary. It should be done after properly formulating the research hypothesis.	The sample size was calculated based on a previous study that reported that the prevalence of the preeclampsia is 5.4% in Indian (Eclampsia/ National Health Portal of India, https://www.nhp.gov.in/disease/gynaecology-and-obstetrics/preeclampsia), 95% level of confidence and Error rate, usually set at 0.10. Total 79 patients will be included in each group of the study. $Z2\ P(1-P)/d^2$ Where, n = sample size, Z = Z statistic for a level of confidence, for the level of confidence of 95%, which is conventional, Z value is 1.96.; P = expected prevalence or proportion (in proportion of one; if 5.4%, P = 0.054), d = precision (in proportion of one; if 5%, d = 0.05). $n=1.96x1.96x0.054x0.946/0.05^2$ n=79
	Statistical analysis section is also very general. It should be planned according to the research hypothesis.	**Statistical Analysis:** Data was calculated and analysed. The Chi-

(Shally Awasthi)

IB — **Expedited review**

1- Expedited review of research proposal entitled ***"A prospective study of delivery room Neonatal Resucitative interventions, intervention based modified APGAR score and early neonatal outcome"*** submitted by Dr. Alia Zehra, JR-I, Department of Paediatrics, K.G's Medical University, U.P., Lucknow vide letter dated 21st January, 2023.

The above research proposal forwarded to two both reviewers, reply have given by both reviewers with following comments:-

Comments of first Primary reviewer:

- There are too many primary objectives.
- Identify one primary (main) objective. Rest should be grouped into secondary objectives.
- Identify the study variables and population parameters.
- Define research hypothesis (corresponding to primary objective) in terms of study parameters.
- Sample size calculation should be based on main research hypothesis.
- Statistical section should be more specific towards the objectives of the study.

Comments of Secondary Primary reviewer:

- Guardian consent form instead of regular ICF is to be attached.

The above comments forwarded to the PI, reply has given by PI which was forwarded to both reviewers:

Recommendation of first Primary reviewer:- Approved

Recommendation of Secondary Primary reviewer:-

- PI said that she would attach the Guardian consent form, but did not attaché.

Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	George's Medical University, U.P., Lucknow vide letter no. 1818/DGMH/22 dated 31st October, 2022. ***Recommendation of Primary reviewer:*** Kindly explain: • Is functional MRI in respect to treatment decision or prognosis, beneficial for the patient having cognitive impairment? If not, then the patient must be informed that this investigation is not a routine process and he/she has to express the willingness to participate in the study. • Please mention clearly that what is the cost of investigation and who will bear it? Patient or investigator. It should be clearly mentioned in the ICF. **PGTSC Comment:** As above **PGTSC Decision:** Approval subject to modification with table giving point wise response to comments. ***Ref. code: XV-PGTSC-IIA/P20***
21.	Research proposal entitled ***"To evaluate the predictors of extent and pattern of response to neoadjuvant chemotherapy in breast cancer with emphasis on MAGEE3 equation"*** submitted by Dr. Shehla Fayyaz, JRI, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no. 1373/22 dated 17th November, 2022. ***Recommendation of Primary reviewer:*** • Design of study is mentioned as retrospective in the cover letter and retrospective ad prospective in the Material and Methods section. Please clarify. • Sample size is mentioned as 200 at one place and 125 at another. • PI has asked for consent waiver but the design of study is prospective with consent and collection of date being done in prospective manner. • The PI has also included a consent form in the proforma. • Consent cannot be waived if patients are involved in the study. **PGTSC Comment:** As above **PGTSC Decision:** Approval subject to modification with table giving point wise response to comments. ***Ref. code: XV-PGTSC-IIA/P21***
22.	Research proposal entitled ***"Quantification of level of endotoxins and lipoteichoic acid (LTA) after photodynamic therapy (PDT) in teeth with secondary endodontic infection: A clinical study"*** submitted by Dr. Dhaniba. K.C, JRI, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no.394/Coms&Endo/22 dated 29th November, 2022. ***Recommendation of Primary reviewer:*** • The study has six investigators from the same department, including the PI, with overlapping roles. Please reduce the number of Co-PIs or define their individual roles. • The IEC form is incompletely filled. • Please fill the form properly and re-submit. • Consent form does not have contact details/phone number of PI/Co-PI. **PGTSC Comment:** As above

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	PGTSC Decision: Approval subject to modification with table giving point wise response to comments. ***Ref. code: XV-PGTSC-IIA/P22***
23.	Research proposal entitled ***"Outcome analysis of pituitary adenoma patients: a retrospective study of last 5 years at a tertiary care centre"*** submitted by Dr. Sanjeev Kumar, SRI, Department of Neurosurgery, King George's Medical University, U.P., Lucknow vide letter no. NS/1670/22 dated 29th November, 2022. *Recommendation of Primary reviewer:* • Design of the study is mentioned as retrospective but data is also being collected prospectively from patients. • No sample size is mentioned in the study. • Patients are being subjected to repeat scanning on follow-up for the study. Who will bear the cost of the scans if the scan is not part of the standard follow-up protocol? • Vulnerable subjects' section has to be filled in by the PI. **PGTSC Comment:** As above **PGTSC Decision:** Approval subject to modification with table giving point wise response to comments. ***Ref. code: XV-PGTSC-IIA/P23***
24.	Research proposal entitled ***"Seroprevalence of hepatitis E (HEV) antibody in pregnant female"*** submitted by Dr. Meghna, JRI, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no. OG/3223/22 dated 11th November, 2022. *Recommendation of Primary reviewer:* • Sample size is mentioned as 500 at one place and 100 at another. • A gastroenterology faculty from another Institution has been included as Co-PI while KGMU itself has a Gastro department. • Is there a specific reason for this? **PGTSC Comment:** As above **PGTSC Decision:** Approval subject to modification with table giving point wise response to comments. ***Ref. code: XV-PGTSC-IIA/P24***
25.	Research proposal entitled ***"Effects of equiosmolar 3% hypertonic saline, 8.4% sodium bicarbonate and 20% mannitol on intracranial pressure and metabolic changes in patients undergoing supratentorial craniotomy & tumors excision: A prospective, randomized controlled study"*** submitted by Dr. L.P. Huimila, JRI, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. Anaes/1144/22 dated 7th September, 2022. *Recommendation of Primary reviewer:* • Number of subjects not mentioned in the IEC form. • Section on vulnerable subjects, special group subjects and biological and hazardous material not filled. • Sample size mentioned as 9(30x3) but sample size calculation has not been done.

7. Mrs.Akansha Dubey

I-A	Action taken
1-	Clarification of research proposal entitled **"*Engineering conditionally replication competent SARS-CoV-2 viral molecular clones and evaluation of cross-variant neutralization*"** sponsored by CSIR-CDRI submitted by Prof. Avinash Agrawal, Head, Department of Critical Care Medicine, King George's Medical University, U.P., Lucknow vide letter no. DCCM/1092/22 dated 5th December, 2022. ***Recommendation of Primary reviewer:*** • There are three sections: (i) Hypothesis and objectives, (ii) Aim, and (iii) Objective.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	• Specify one primary objective and club the rest into secondary objectives. • Identify the study variables and population parameters. • Convert the primary objective into proper research hypothesis using the study variables and population parameters. • What is the study design used? • What is the sampling method? • Sample size calculation is missing. In data analysis para, it is mentioned that 100 patients shall be used. Where does this number come from? • Statistical analysis details are not provided. **Previous EC Decision:** Organize a Meeting with PI, Co-PI with Prof. G.G. Agarwal along with Prof. Shally Awasthi, Member-Secretary, IEC **EC Comment:** • Dr. Agarwal presented his proposal to EC Members. The EC Members gave suggestions and told him that it is the patient's sheet. Only part of the work will be done in KGMU. Dr. Agarwal has to make a summary of changes done in a tabular format and submit it with the revised proposal for approval at the earliest. **EC Decision:** Approval subject to modification. ***Ref. code: 121st ECM IIA/P2***
2-	Clarification of research proposal entitled AVT06-GL-C01 Version: Version 2.0,21 December 2021 entitled ***"A randomized, double-masked, parallel-group, multicenter clinical study to evaluate the efficacy and safety of AVT06 compared with EU-Eylea® in subjects with neovascular (Wet) age-related macular degeneration (ALCOEYE)"*** sponsored by M/s Alvotech Swiss AG Thurgauerstrasse submitted by Prof. Sandeep Saxena, Department of Ophthalmology, King George's Medical University, U.P., Lucknow, vide letter no. 1856/OPH dated 15th March, 2023. ***Previous recommendation of PR:*** • The proposal was discussed in the meeting held at KGMU and comments given. **Previous EC Comment:** • Study Design, Please clarify • Recruitment Period, Please clarify. **Reply of PI** 1. **Study Design:** As per the Protocol AVT06-GL-C01 – Version 2.0, 21 Dec 2021 section 4.1, the study consists of a screening period of up to 4 weeks, a treatment period of 48 weeks, and a follow-up period of 4 weeks until Week 52 (end of study). The **total study duration per subject is 56 weeks** including screening period e.g. if The Subject gets enrolled in Jun 2023 then the subject participation in study will be completed somewhere in July 2024. Means subject study participation is for approx. 1 year.

Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated 17th March, 2023

	2. **Recruitment Period:** It is extended till beginning of Jun-2023 (Sponsor India Newsletter is attached, Page number 03) *The above Comment forwarded to PI was reviewed by PR:-* **EC Decision:** Defer to the next Meeting because quorum was incomplete. ***Ref. code: 118th ECM IIC/P1***
3-.	Clarification of research proposal entitled "***Mechanisms of autophagy-mediated cell survival in breast cancers and its implication in therapeutics and diagnostics***" submitted by Prof. M.L.B. Bhatt, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 208/RT/2023 dated 27th February, 2023. **Previous EC Comment** | **PI response** No patient information brochure. Hindi translation of title of proposal is incorrect. | It has been attached as annexure VII in both Hindi & English languages. *The above Comment forwarded to PI was reviewed by PR:-* • Clarification related AUTOPHAGY RELATED GENES IN BREAST CANCER. • Looks ok. Autophagy related genes-can be simplified. • Just as studies related to genes which can be important modifies of effects of therapies. • Word [UTAK] for tissue sample-can be replaced by ट्यूमर का नमूना या सर्जरी से निकाले गये ट्यूमर का थोड़ा हिस्सा। • Retrospective data analysis, no identifiers in the data. • Patients will not be contacted for missing information. **EC Comment:** As above **EC Decision:** Approval subject to modification ***Ref. code: 116th ECM IIA/P7***
4.	Clarification of research proposal entitled "***Study to establish validity of rubric based assessment tool for evaluation of analytical cognitive skills in neuroanatomy module in first phase MBBS course***" submitted by Prof. Anita Rani, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 616/ANAT/23 dated 14th February, 2023. *Previous EC Comment:* • References not attached *The above Comment forwarded to PI was reviewed by PR:-* *Recommendation of PR:* Provisionally approved

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

EC Decision: Approved
Dr. Anita Rani did not take part in the discussion & making decision.
Ref. code: 120th ECM IIA/P17

5. Clarification of research proposal entitled **"*Obesity and its impact on public Health: An epidemiological study on Uttar Pradesh population*"** submitted by Dr. Suchit Swaroop, Associate Professor, Department of Zoology, Co-PI Prof. Satyendra Kumar Sonkar, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 529/Med/23 dated 28th February, 2023.

Previous EC Comment	PI response
While for "Use of Biological material" it is indicated as "NA" it means no blood will be collected, on the other hand second objectives related to "Biochemical Profiling" and the data collection sheet contains 'blood details'	Since it is a cross sectional observational study and based on case histories / questionnaire, therefore, there is no need of blood collection from patients. Collection of data will be done from patient's case history reports and available biochemical routine test reports from the case record.
Patient information sheet is still not attached as per SOP.	Patient information sheet has been attached in both English and Hindi versions.
Statistical analysis will obviously be done after data collection but PI is expected to submit the anticipated Statistical analysis on the basis of anticipated outcome parameters.	ICF was submitted both in Hindi and English along with IEC submission form. And also attached herewith.
Statistical analysis will obviously be done after data collection but PI is expected to submit the anticipated Statistical analysis on the basis of anticipated outcome parameters.	Statistical analysis will be performed using statistical software SPSS (IBM Statistical Package for Social Sciences, Statistic for Windows, Version 28.0. Armonk, NY: IBM Corp). All values will be expressed as mean ± SD, and p-value (<0.05) will be considered as statistically significant. The continuous variables in accordance with the normal distribution will be expressed by mean ± standard deviation, and the quantitative data will be compared by independent sample t-test. The BMI will be converted to a z-score by this equation: (BMI-BMImean)/BMISD. WC, HC and WC/HC will be also transformed to z-

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		scores by the same equation. The association between each z-score and Obesity will be measured by the logistic analysis, and adjusted factors (age, gender, drinking and smoking conditions). Chi-square test or Fisher' s exact test would be use to compare the prevalence of disease among individuals. ANOVA, Pearson correlation, logistic regression and linear regression will also be used analyse the results.

The above Comment forwarded to PI was reviewed by PR:-
Recommendation of PR: Provisionally approved
EC Decision: Approved

Study design in Protocol - Prospective observational study from June -21 to June -22 ? If study has already not started then how it is possible. In ICF the study design mentioned is Combined Retrospective and Prospective study.	Study design is Prospective observational study. □ Study period is June 2021 to October 2022. □ Study has already started.
Sample size -All adult pts will be included , exact calculated sample size not given	The sample size was calculated based on the previous study that reported the prevalence of kidney stones is ~10% globally (Saeed R. Khan et al 2017) 95% level of confidence and error rate, usually set at 0.05. Total 139 (minimum) patients will be included in this study. n= Z 2 P(1-P)/d 2 Where • n= sample size • Z=Z statistic for level of confidence , for the level of confidence of 95% which is conventional ,Z value is 1.96 • P= Expected prevalence of proportion (in

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		proportion of one ,if 10% ,P=0.1) • d= precision (in proportion of one: if 5% d =0.05). n=1.96 x 1.96 x 0.1 x 0.935/0.052 =138.29 =139
	In Exclusion criteria – it is mentioned that pt below 12 yrs of age not included (In methodology it has been mentioned that analysis of prospectively maintained data of more than 12 yrs of age)– please Clarify. The Age of the patients being included.	All the patients at or above 18 years of age undergoing the procedure percutaneous nephrolithotomy are being included in the study. Patients below 18 years of age are being excluded from study.

3- Clarification of research proposal entitled ***"Efficacy of nasolabial flap in post mucor infrastructure maxillectomy defects"*** submitted by Dr. Ravi Katrolia, SR, Department of Oral & Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 245/OMSD/23 dated 15th February, 2023.

Previous PGTSC Comment	PI response
This is a before and after treatment study.	Yes, this is a before and after type of prospective study. Changes have been made in the ethical form.
Study variables and parameters should be properly defined for the study.	Proforma was revised accordingly
Research hypothesis should be formulated in terms of the parameters.	To evaluate the efficacy of nasolabial flap in rehabilitation of post mucor infrastructure maxillectomy defects in terms of nutritional status, speech and swallowing ability.
Sample size calculation is required.	Sample calculation is attached to the profoma.
Statistical analysis section is required.	All the values will be tabulated pre and post surgically based on the grading system provided. Data will be analysed using SPSS software to generate the results.

4-	Clarification of research proposal entitled ***"The effect of concentrated growth factor (SGF) and platelet rich fibrin (PRF) on post endodontic surgery healing: A randomized clinical trial"*** submitted by Dr. Supriya Choudhary, JRI, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 490/Coms & Endo/2023 dated 25th January, 2023. ***Recommendation of Primary reviewer:*** • If it is really, RCT, all the fundamentals are missing. • Clinical trial registry is required. • For example, (i) proper formulation of research hypotheses, (ii) study variables, (iii) primary and secondary outcome measures, (iv) method used to generate the random allocation sequence, including details of any restrictions (blocking, stratification etc.), (v) How double blinding is done, (vi) how the success of masking assessed. • The sample size calculation is arbitrary in the absence of proper research hypothesis. • The statistical methods used to compare groups for primary outcomes, methods for additional analyses, such as subgroup analyses and adjusted analyses. • How the results will be presented: (i) Participants flow, (ii) baseline data, (iii) outcomes and estimation, (iv) adverse events, etc. ***The above Comment forwarded to PI was reviewed by PR:-*** ***Recommendation of PR:*** Approved **PGTSC Decision:** As above ***Ref. code: XIII-PGTSC-IIA/P8***
5-	Clarification of research proposal entitled ***"Clinicophysiological outcome after peroral endoscopic myotomy (POEM) vs heller's cardiomyotomy for achalasia cardia"*** submitted by Dr. Sanjay Kumar Tripathi, SR, Department of Surgical Gastroenterology, King George's Medical University, U.P., Lucknow vide letter no. 122/23 dated 9th February, 2023.

Previous PGTSC Comment	PI response
Research hypothesis should be stated after properly identifying the study variables and parameters.	Hypothesis of this study that the suboptimal clinical response observed with LHM in the treatment of achalasia is due to an inadequate myotomy length, and POEM allows for a longer myotomy, hence it may be more successful in achieving clinical response. So aims of this study is to compare the effectiveness and safety of POEM and LHM for the treatment of patients with achalasia.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Sample size calculation is missing.	**Sample size:** Sample size was calculated using 98 % clinical response in POEM group and 80.8% in LHM group (As per the study by Vivek Kumbhari, et.al.2014 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4486039/pdf/10-1055-s-0034-1391668.pdf). The β error was taken as 20% (study power-80%) and alpha error of 5%. **Formula** n = (Zα/2+Zβ)2 * (p1(1-p1)+p2(1-p2)) / (p1-p2)2, Zα/2 is the critical value of the Normal distribution at α/2 (e.g. for a confidence level of 95%, α is 0.05 and the critical value is 1.96), Zβ is the critical value of the Normal distribution at β (e.g. for a power of 80%, β is 0.2 and the critical value is 0.84) p1 and p2 are the expected sample proportions of the two groups. The minimum calculated sample size is 50 patients in each group.
	Statistical analysis section is arbitrary. It should be specific to the research hypothesis in question.	Data Management and Statistical analysis: Data will be entered on excel sheet. Statistical analysis will be performed using the software Statistical Package for the Social Sciences (SPSS Version 16.0, Chicago, IL) for windows or using Graph pad prism (Version 5.0). For continuous variables, multiple groups were compared using one-way ANOVA and by student t-test for two groups. Categorical data's will be analysed using Chi-square test with Yates' correction or Chi- square test for trend or Fisher exact test. Correlation analysis will be performed using Pearson correlation method. Patient survival will be estimated using the Kaplan-Meier method and the difference between the survival curves will be analyzed by the log-rank test. Cox proportional hazard analysis will be used for estimating the hazard of failure. Two-tailed p value less than 0.05 will be considered to be statistically significant.

11 Clarification of research proposal entitled ***"Assessment of midterm estimated GFR(EGFR) by different formula (24HRS CREATININE CLEARANCE, MDRD, CKD-EPI & NANRA) in patients of hypertensive disorders of pregnancy and its association with fetomaternal outcomes"*** submitted by Dr. Priya Agarwal, JRI, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no. OG/3868/2023 dated 3rd February, 2023

Previous PGTSC Comment	PI response
The study variables and study parameters should be identified.	Midterm eGFR will be calculated in all pregnant women between 14-28 weeks coming to Department of Obstetrics & Gynecology, KGMU in both OPD and IPD for antenatal care. using different formulae (CKD-EPI, MDRD, NANRA) and will be compared with gold standard 24-hour urine creatinine clearance. Primary outcome will be studied in form of sensitivity and specificity of the other methods of eGFR calculation (CKD-EPI, MDRD, NANRA) as compared to gold standard 24-hour urine creatinine clearance Secondary outcome will include

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		correlation of eGFR with adverse fetomaternal outcomes. **Adverse maternal outcome will be measured in form of** - Women developing Hypertensive disorder of pregnancy (HDP) which could be gestational hypertension, non-severe preeclampsia, severe preeclampsia or eclampsia. -Placental Abruption -Oligohydramnios -Pulmonary Edema -Hepatic dysfunction /HELLP Syndrome -Cardiovascular accidents **Adverse fetal outcome will be measured in form of** - Preterm birth - IUGR - Antepartum fetal demise - Need for NNU /NICU admission
	The research hypothesis should be properly formulated in terms of study parameters.	**NULL HYPOTHESIS-** 1) The other methods of eGFR calculation (CKD-EPI, MDRD, NANRA) are not better as compared with gold standard 24-hour urine creatinine clearance. 2) eGFR has no association with fetomaternal outcomes. **ALTERNATE HYPOTHESIS** 1) The other methods of eGFR calculation (CKD-EPI, MDRD,

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		NANRA) are better as compared with gold standard 24-hour urine creatinine clearance. 2) eGFR has association with fetomaternal outcomes. **AIM** 1. To determine sensitivity and specificity of other methods of eGFR calculation (CKD-EPI, MDRD, NANRA) with gold standard (24-hour urine creatinine clearance) in pregnant women. 2. To determine the association of eGFR with fetomaternal outcomes. **OBJECTIVES** 1) Calculation of midterm eGFR by different formula in pregnant women (CKD-EPI, MDRD, NANRA) and compare it with gold standard (24-hour urine creatinine clearance) between 14-28 weeks gestation. 2) Association of eGFR with fetomaternal outcomes.
The sample size calculation is arbitrary. It can be done only after defining the research hypothesis. Statistical Analysis section is missing.		*According to a study Kaul A, Pandey A, Behera MR, et al. Midterm eGFR Predicts Pregnancy Outcomes: An Observational Study. J Assoc Physicians India 2022;70(12):22–25.* Sample size for present study was estimated for Fischer's exact test by using G power software. Considering the proportions of adverse outcomes (Group 1) and normal fetomaternal outcomes (Group 2) in the forementioned study (0.34 and 0.65) respectively, alpha =0.05 and power =0.95 with allocation ratio (N2/N1) 2.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		The sample size required is 129 with allocation of 43 and 86 in group 1 and group 2. In this study patients will be divided in two groups based on eGFR calculated by 24-hour urine creatinine clearance. **Group 1 having eGFR <=120 and >=150ml/min/1.72m2.** **Group 2 having eGFR between 120-150ml/min/1.73m2.** Considering the loss to follow up to be approx. 10% in each group Loss to follow up of patients in Group 1=10 % x 43= 4.3 Loss to follow up of patients in Group 2=10% x 86= 8.6 Total patients in group 1(abnormal eGFR)= { 43 + 4.3}= 47.3~ 48 Total patients in group 2(normal eGFR)= { 86 + 8.6}= 94.6~ 95 **Total sample size= 48 + 95= 143 ~ 144** The eGFR of patients enrolled in the study will be calculated by 24-hour urine creatinine clearance formula and based on that patients will be divided in two groups till the sample size is completed.
	The study design is mentioned as "prospective case control study" It should be properly mentioned as case-control study is retrospective study.	The study design is "Prospective cohort study".
	Statistical analysis section is missing.	**Statistical Analysis**: SPSS version 21.0 will be used for statistical analysis. Data will be presented as mean (standard deviation), number and percentage (%). The Chi-square and Fischer's exact test will be used to compare the categorical variables and independent t test will

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		be used to compare discrete variables between groups. The Sensitivity, Specificity, PPV, NPV and ROC curve will be used to assess the overall diagnostic of abnormal outcome. Previous PGTSC Comment	PI response
Research hypothesis	This study is hypothesized to ascertain effect of dopamine infusion on progression of sepsis to acute lung injury assuming that there is no effect of dopamine on progression of sepsis to acute lung injury in ICU admitted patients.
Study variables	Progression to acute lung injury which can be assesses by following variables : VEGF levels Development of ALI on the basis of chest x-ray and Murray's score
Primary and secondary outcome measures	Primary : To assess the effect of dopamine as VEGF inhibitor on progression of sepsis to ALI Secondary: 1. To establish the relationship of VEGF level in severity of lung injury. 2. To correlate the survival benefit of Dopamine in patients with sepsis. 3. Length of ICU stay. 4. Any associated side effect of dopamine.
Method used to generate random allocation	Randomized by computer generated random number table in two groups (I & II)
Blinding	Sample will be collected and sent for analysis by the personals working in the ICU, not involved in the study so that neither the patient nor the investigator will know that what treatment patient has received.
Sample Size	The sample size will be calculated based on a previous study that reported that incidence of acute lung injury (ALI)/acute respiratory distress syndrome (ARDS) was 11.4% in India (Singh

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		et al., 2014), 8 95% level of confidence and Error rate, usually set at 0.07 level is 4. Total 78 patients will be included in this study. n=Z 2 P(1-P)/d 2 Where, • n = sample size, • Z = Z statistic for a level of confidence, for the level of confidence of 95%, which is conventional, Z value is 1.96. • P = expected prevalence or proportion (in proportion of one; if 11.4%, P = 0.11), • d = precision (in proportion of one; if 7%, d = 0.07). n=1.96x1.96x0.11x0.89/0.07 2 n=76.75=77
	CTRI registration	Will apply after ethical approval?
	Statistical Method	SPSS version 21.0 will be used for statistical analysis. Data will be presented as mean (standard deviation), number and percentage (%). The Chi-square test will be used to compare the categorical variables and independent t test will be used to compare discrete variables between groups. The Sensitivity, Specificity, PPV, NPV and ROC curve will be used to assess the overall diagnosis of lung injury. Regression analysis will be used for the estimation of relationships between a dependent variable and one or more independent variables. The p value 0.05 will be considered significant.
	How results will be presented: Participants flow, baseline data, outcome and estimation	CONSORT diagram for the same is attached separately.
	Adverse events	Any associated side effect of dopamine, including cardiovascular,

(Shally Awasthi)
Member-Secretary, IEC

19- Clarification of research proposal entitled ***"Analysis of treatment and survival outcome of vulval carcinoma over a period of 10 years"*** submitted by Dr. Akanksha Jaiswal, JRI, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no. OG/3979/23 dated 15th February, 2022.

Previous PGTSC Comment	PI response
Title says: "Analysis of treatment	The title is being changed to "Analysis of

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

and survival outcome of vulval carcinoma over a period of 10 years"	Disease Characteristics and survival outcome of vulval carcinoma."
The duration of study is supposed to be one year.	It is admitted that the duration of study is one year, which is going to be done by the undersigned on the basis of 10 years records available in the Department of Obstetrics and Gynaecology and Department of Radiation Oncology, KGMU, Lucknow, U.P.,(i.e. the cases diagnosed between January 2014 to December 2023).
The study variables and study parameters should be identified.	The Variables Parameters are to be studied as follows:- -Demographic variable:- age, parity, residence, menopausal status. -Disease Variable:- Risk factors, Presenting symptoms, Histological Stage of Disease. -Treatment Variable:-Surgery or Chemo-radiation. Type of Surgery [Radical velvectomy, modified radical velvectomy (with or without lymphnode dissection)]. -Survival Variable:- Overall survival Disease free survival recurrence.
The research hypothesis should be properly formulated in terms of study parameters.	The research hypothesis is-Are demographic profile, disease characteristics, survival outcome of Vulval Carcinoma similar to global data?
The study design is mentioned as "prospective and retrospective analytic study". It can not be both.	The study is mainly retrospective but cases are being diagnosed and treated during the study will also be included as prospective cases.
The sample size calculation is arbitrary. It should be done after properly formulating the research hypothesis.	Sample size is being calculated in detail as below:- The Sample Size is computed by using the formula Z 2 P(1-P)/d 2 considering 10% as the minimal clinical difference in proportion with 5% level of significance. Prevalence of vulval carcinoma is 0.67% by cancer statistics 2022. The minimum number of subject required is 24.01 adding the 20% of non response. The

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	final sample size is 28.81, which would be considered as 30.
Statistical analysis section is also very general. It should be planned according to the research hypothesis.	The Statistical Analysis will be done on SPSS 23rd version, the data will be duly entered in excel sheets. The demographic profile and clinical features of the data will be analyzed using descriptive statistics. The result will be presented in frequencies, percentage and mean +_SD and a p value of & it 0.1 will be considered statistical significant. The Kaplan–Meier curve will be used for overall survival.

fistula-retrospective and prospective study" submitted by Dr. Krishna Kumar Bhandari, SRI, Department of Urology, King George's Medical University, U.P., Lucknow vide letter no. 175/URO dated 20th February, 2023.

Previous PGTSC Comment	PI response
The type of study is mentioned as "retrospective and prospective study"	The average number of patient with genitourinary fistula being repaired in Dept. of Urology, KGMU on average is 25-30 cases per year. The estimated sample size of our study would be around 139 cases, so I have to consider retrospective analysis of patients already underwent genitourinary fistula repair over past years (as retrospective study) from 2002 to 2022 and also will take prospective data from January 2023 to December 2023 with follow up period of 2 months. The study design is thus both retrospective and prospective in nature.
The study can not be prospective and retrospective at the same time.	**Retrospective study:-** From 2002 to 2022, the outcome analysis of patients already treated in Dept. of urology KGMU will be done. This will be retrospective type of study. **Prospective Study:-** The study period will be from January 2023 to December 2023 and outcome of repaired genitourinary fistula with follow up period of 2 months will be included. The total data will be analyzed finally for a meaningful outcome result.
The research hypotheses, sample size calculations etc. would be different for two types of studies.	The estimated Sample size calculated is based on the reported success rate of genitourinary fistula which is more than 90 % globally (Priyadarshi et. al. 2006, V singh et. al. 2012, 2013) , with 95% level of confidence and Error rate, usually set as 5% , total 139 Patients will be included in this study for a meaningful outcome result. n= Z 2 P(1-P)/d 2 Where, □ n = Sample size,

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		□ Z = Z Statistic for level of confidence, for the level of confidence of 95%, which is conventional, Z value is 1.96. □ P = Expected prevalence of proportion (in proportion of one; if 90%, P = 0.9). □ d = Precision (in proportion of one; if 5%, d = 0.05). n = 1.96x1.96x0.9x0.1/0.05 2 n = 138.4 n = 139
	The proposal should be very specific clearly defining the objectives, research hypotheses etc.	**Primary objective of study:** - To know the success rate of genitourinary fistula repair. The success of repair is defined as complete cure of urinary Incontinence.
	The "patient consent form" is missing (English & Hindi both)	The patient consent form has been attached in (both Hindi and English).

22- Clarification of research proposal entitled ***"Comparison of ultrasound guided continuous erector spinae plane block and epidural block for postoperative analgesia in laparoscopic nephrectomy: A prospective randomized study"*** submitted by Dr. Amita Singh, JRI, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. Anaes/94/2023 dated 30th January, 2023.

Previous PGTSC Comment	PI response
The study variables and study parameters should be identified.	AIM: The aim of the study is to compare ultrasound guided continuous Erector Spinae Plane block and Epidural block for postoperative analgesia in Laparoscopic Nephrectomy. OBJECTIVE • Primary objective: • To compare time of use of first dose of rescue analgesia • Secondary objective:to compare: • Total consumption of rescue analgesic

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		in 24 hours postoperatively in both groups. • VAS score in 24 hours postoperatively. • Perioperative hemodynamic changes. • Procedure related complications. • Total intraoperative fentanyl consumption if heart rate or blood pressure or both increase >20% of baseline. • Bowel recovery and ambulation. Primary Outcome Variable: Time taken for administration of first rescue analgesic (Injection Tramadol 100 mg IV)measured from time of giving block/epidural will be primary outcome variable. Secondary Outcome Variable: 1. Total consumption of rescue analgesia (injection Tramadol 100 mg IV) consumed in first 24 hours after surgery. 2. Post-operative VAS in first 24 hours at (0 min,30mins,1 ,2,4,6,12,24 hrs) 3. Perioperative hemodynamic (heart rate, mean blood pressure, respiratory rate, SpO2) changes at (0 min,30 mins,1,2,4,6,12,24hrs) 4. Total intraoperative fentanyl consumption if heart rate or blood pressure or both increase >20% of baseline 5. Procedure related complications. 6. Bowel recovery and ambulation
	Research hypothesis should be defined in terms of study parameters.	Research Hypothesis –To determine which of the following two blocks: ultrasound-guided continuous erect spinae block and epidural block is superior for

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		postoperative analgesia in laparoscopic nephrectomy
	Sample size calculation is arbitrary. It should be specific to the research hypothesis.	The study has power of 0.8 and type I error of 0.05. On the basis of previous study, the changes in mean Time to first rescue analgesia (h) in between Erector Spinae Plane Block group (7.0) and Thoracic Epidural Blocks (5.31) was 1.69 and the population variance ($\sigma 2$) was 1.81 (Moharam et al., 2022). The sample size (n) = 2 ($Z\alpha/2 + Z$ [1-β]) 2 × $\sigma 2$ /($\mu 1 - \mu 2$)2, assuming 0.05 level significance ($Z\alpha/2$ =1.96), and 90% power (Z [1-β])=1.28) was 24.08 in each group. Due to follow-up loss, in this study we will enroll 30 patients in each group. 2 ($Z\alpha/2$ + Z [1-β]) 2 × $\sigma 2$ n= ($\mu 1 - \mu 2$)2 2 (1.96 + 1.28)2 × 1.812 n= (7.0-5.31)2 n=24.08(minimum number of patients in each group) To account for follow-up loss, 30 patients will be included in each group. Moharam SA, Amera M. Elkeblawy, Marouf HM, Elnoamany TM. Comparison of Ultrasound Guided Thoracic Erector Spinae Plane, Thoracic Paravertebral and Thoracic Epidural Blocks for Pain Management after Nephrectomy. JAMMR 2022;34(19):44-52, 2022
	Statistical analysis section is also very genera. It should be specific to the research hypothesis.	The statistical analysis will be done using SPSS 21.0 version (Chicago, Inc., USA) windows software. The data will be expressed as mean±standard deviation (SD) or median with range and number with percentage as appropriate. All the categorical data

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		will be compared by using Chi-squared test. Continuous variables in two groups will be compared by unpaired t- test. Ordinal variables will be analyzed using Mann-Whitney U test.A two sided p-value <0.05 will be considered significant.

The project has 7 Co-PIs besides the candidate/PI herself.	All the Co-PIs are contributing significantly in the project. Their expertise is warranted and therefore they are included as the Co-PI. We do not wish to remove any names from the proposal.
Number if subjects/ sample size has not been mentioned in the IEC form.	Since this is an observational study so the appropriate sample size cannot be calculated and the convenient sample size would be taken depending on the annual number of patients detected with specified organism of the study (Candida auris) in culture.
Sections on vulnerable subjects, biological/hazardous material and risk and benefit have been left incomplete.	Section on vulnerable subjects, biological/hazardous material and risk and benefit has been completely filled. □ Changes have been done and copy of that has been attached.

The above Comment forwarded to PI was reviewed by PR:-
Second recommendation of PR:

- Sample size has not been mentioned and the PI has refused to mention the sample size even in the clarifications. Study cannot be approved without sample size calculation.

		0.835) d=precision (in proportion of one ; if 5%, d=0.05) n=1.96x1.96x0.835(1-0.835)/0.05x0.05 n=211.71 ~212 subjects
	No details regarding how the vaginal microbiome will be estimated has been given in the methodology.	For vaginal microbiome estimation, 2 high vaginal swabs will be taken from each patient. One swab will be subjected to gram staining and further Nugent scoring will be done to determine normal vaginal flora versus bacterial vaginosis. The other swab will be subjected to culture on culture media like Blood and MacConkey's agar to see growth of various bacteria like staphylococcus, streptococcus, E. coli, kliebesella and pseudomonas and other lactose and non lactose fermenting bacteria that might be the present in the high vaginal swab of the patient.
	Collection of biological specimen is not mentioned in the IEC form in the concerned section on biological/hazardous material.	Attached here in.

Previous PGTSC Comment	PI response
It is not clear which samples will be collected, as mentioned in the materials and methods section?	All infertile women coming for seeking infertility treatment total 180 women will be recruited and will be randomized. No blood or any tissue samples will be taken. Ovarian stimulation will be done by Tab letrozole (5 mg) and clomiphene citrate 50 mg together verses Tab letrozole 5 mg alone in 2 groups respectively. Ovulation will seen by non invasive trans vaginal sonography.

2- Clarification of research proposal entitled AVT06-GL-C01 Version: Version 2.0,21 December 2021 entitled ***"A randomized, double-masked, parallel-group, multicenter clinical study to evaluate the efficacy and safety of AVT06 compared with EU-Eylea® in subjects with neovascular (Wet) age-related macular degeneration (ALCOEYE)"*** sponsored by M/s Alvotech Swiss AG Thurgauerstrasse submitted by Prof. Sandeep Saxena, Department of Ophthalmology, King George's Medical University, U.P., Lucknow, vide letter no. 1856/OPH dated 15th March, 2023.

Recommendation of Primary reviewer:

- The research proposal was discussed in the meeting held at KGMU and comments given.

Previous EC Comment:

- Study Design, Please clarify
- Recruitment Period, Please clarify.

Reply of PI

1. **Study Design:** As per the protocol AVT06-GL-C01 – Version 2.0, 21 Dec 2021 section 4.1, the study consists of a screening period of up to 4 weeks, a treatment period of 48 weeks, and a follow-up period of 4 weeks until Week 52 (end of study). The **total study duration per subject is 56 weeks** including screening period e.g. if The Subject gets enrolled in Jun 2023 then the subject participation in study will be completed somewhere in July 2024. Means subject study participation is for approx. 1 year.

2. **Recruitment Period:** It is extended till beginning of Jun-2023 (Sponsor India News letter is attached, Page number 03)

The above Comment forwarded to PI was reviewed by Primary reviewer:-

Previous EC Decision: Defer to the next Meeting because quorum was incomplete.

4.	Research protocol entitled "***A phase 2, multicenter, randomized, double-blind, placebo-controlled, parallel-group study to evaluate the clinical efficacy and safety of VTX002 in subjects with moderately to severely active ulcerative colitis***" sponsored by M/s Oppilan Pharma Ltd submitted by Prof. Abhijit Chandra, Department of Surgical Gastroenterology, King George's Medical University, U.P., Lucknow vide letter no. SGE/CT/05/23 dated 22nd February, 2023. ***Recommendation of Primary reviewer:*** • CTRI form has been submitted. CTRI Approval is pending. • DCGI permission not present. • Optional Genetic testing is being ordered from outside the country-Central Lab. Labcorp Development, Singapore. • Is pregnant partner and fetus of a subject receiving the test drug covered under the Insurance scheme? • Could not fine the budget approval in the IEC form is 180. However, in the CTRI application the sample size from India in mentioned as 25 • Section on Biological/hazardous material in incorrectly filled as blood is being collected for Optional Genetic Sampling and is being sent abroad. • Section on Compensation says, compensation will be paid by Sponsor not the Insurance Company. Is this correct? **Previous EC Decision:** Defer to the next Meeting because quorum was incomplete.

B	**Current Agenda of 123rd IEC Meeting virtually held on 19-04-2023 from 1.00 PM.**
I-A	**Action taken**
1-	Clarification of research proposal entitled ***"Effect of vocational rehabilitation in myocardial infarction patients and returning back to their work after myocardial infarction"*** submitted by Ms. Meenakshi Mishra, Ph.D. Scholar 2019 under the guidance of Prof. S.K. Dwivedi, Department of Cardiology, King George's Medical University, U.P., Lucknow vide letter no. 11/Cardio/Res/2023 dated 18th April, 2023. **Previous EC Comment:** • Kindly correct the title of the proposal-entitled ***"Effect of vocational rehabilitation in patients returning back to their work following myocardial infarction"*** ***The above Comment forwarded to Principal-Investigator was reviewed by Primary reviewer:-*** ***Recommendation of Primary reviewer:*** There is no proposal enclosed. Please check and resend. ***The above comment forwarded to Principal-Investigator & she has given her reply with full proposal vide letter no.720/Cardio/Res/23 dated 31st March, 2023 which was forwarded to Dr. Akash Agarwal vide this office letter no.27/Ethics/2023 dated 1st April, 2023.*** ***Recommendation of Primary reviewer:*** • Is this work, the PhD work? • If yes, what was the student doing since 2019. • If no, how can a PhD student become PI? • Pages 15 and 19 aims and objectives, both are vague, and different. • I have yet to come across a randomised Case control study in literature.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated 19th April, 2023

	• What is the endpoint? • What is the outcome variable and of what kind? • Sample size calculation, study design, outcome variables, all three are discordant. • Time points are not mentioned for outcome measures. ***The above Comment forwarded to Principal Investigator:- The above Comment forwarded to Principal-Investigator was reviewed by Primary reviewer:-*** **EC Comment:** Approved ***Ref: code: 113th ECM IIB-Ph.D/P3***
2-	Clarification of research proposal entitled ***"Effect of dopamine as VEGF antagonist on progression of sepsis to septic shock, ALI (acute lung injury) and AKI (acute kidney injury)"*** submitted by Dr. Zia Arshad, Additional Professor, Department of Anaesthesiology, King George's Medical University, U.P., Lucknow vide letter no. 56/CCU/2023 dated 2nd March 2023. **Previous EC Comment:** • Patient information sheet is not attached. • Methodology is grossly incomplete. Kindly elaborate the details of intervention, comparison & outcome. • Kindly revise methodology & data sheet in relevance the sepsis & septic shock. • Anticipated adverse event is still not added in ICF. • Not complied. Methodology to be re-written as per the points raised earlier. ***The above Comment forwarded to PI vide letter no.2327/Ethics/2023 dated 17th March, 2023 & the first reminder send to the PI vide letter no. 2538/Ethics/2023 dated 27th March, 2023 but reply has not been received.*** Reply pending by Principal-Investigator. **EC Comment:** Second reminder will be sent to Principal-Investigator ***Ref. code: 119th ECM IIA/P3***
3-	Clarification of research proposal entitled ***"Evaluation of lignocaine HCI as a therapeutic and diagnostic tool in myofascial pain dysfunction syndrome (MPDS0 and internal derangement"*** submitted by Prof. U.S Pal, Department of Oral & Maxillofacial Surgery, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow. ***Recommendation of Primary reviewer:-*** • There are 4 groups of patients: Patients who will not have effect of Lignocaine, MPDS, ID, ID+MPDS. • Measurements are made at 4 time points. • A difference to detect a difference of 1.3% (of what?) will be detected in 20 patients. • I don't think this is feasible. • Outcome measure will be what type of measurements: N/O/I/R? • Why will direct identifiers be used? ***Studied by another investigator at the request of the Principal Investigator after Chairman's permission.***

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	Recommendation of Secondary reviewer. PI has already made corrections according to the comments, which are valid and made by Primary Reviewer as- • PI cleared that Indirect Identifiers will be taken • Efficacy measures are added • Sample size calculation is revised • Case Record form is attached • PI has given satisfactory answer to quarries of Primary Reviewer for ADR and Compensation • Grouping has also been explained by PI • But PI has not corrected the SOP-Checklist accordingly and did not highlighted the change in protocol–PI should send the corrected SOP-Check list and protocol (Highlighted) with incorporating additional comments, <u>which are as follows:</u> 1. As this is not a Clinical Trial and the Drug Lignocaine is already approved in India, therefore SOP-Checklist must be corrected (SECTION-3 and subsections I, ii, iii). Section 6 – Privacy and Confidentiality–section–I-Indirect Identifier not ticked according to the corrections made by PI in answer to quarries made by Primary Reviewer. Secondly-in section ii- Confidential handling of data by staff is not ticked as YES (Therefore PI is required to send corrected and revised SOP-Check list) 2. In Inclusion /Exclusion criteria–Age/ Sex criteria not mentioned 3. Study design–PI mentioned it as prospective study, which is to be corrected/clarified, as the study design seems to be prospective Interventional and comparative prospective/post operative study. 4. For clarity in methodology PI should add Flow chart of the study. ***The above Comment forwarded to PI vide letter no.2539/Ethics/2023 dated 27th March, 2023 but reply has not been received.*** Reply pending from PI. **EC Decision:** Reminder will be sent to Principal-Investigator ***Ref. code: 119thECM IIA/P18***
4-	Clarification of research proposal entitled "***Evaluation of Hyperbric oxygen therapy in OSMF***" submitted by Prof. U.S. Pal, Department of Oral & Maxillofacial Surgery Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 370/OMSD/23 dated 23rd March, 2023. ***Previous EC Comment:-*** • List of attached documents need to be marked in annexure-1 • Patient information sheet is not attached. • Anticipated statistical analysis needs to be briefed. ***The above Comment forwarded to PI was reviewed by Primary reviewer:-*** ***Second recommendation of Primary reviewer:*** • The investigator has addressed all the points raised except that he still needs to submit patient's information sheet as per KGMU IEC SOP. ***The above comments forwarded to the Principal-Investigator vide this office letter no. 101/Ethics/2023 dated 12th April, 2023.*** ***Reply pending from the Principal-Investigator:*** **EC Decision:** Reminder will be sent to Principal-Investigator

	Ref. code: 120th ECM II A/P26
5-	Clarification of research proposal entitled "***A multicenter cross-sectional study to evaluate the clinical, immunological, and radiological profile of allergic bronchopulmonary aspergillosis (ABPA registry)***" submitted by Prof. Surya Kant, Head, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 414/RESMED/23 dated 1st April, 2023. ***Recommendation of Primary reviewer:*** • Primary reviewer said that the PI has addressed most of the objections raised except that the ICF is still not as per IEC SOP protocol. ***The above Comment forwarded to PI was reviewed by Primary reviewer:-*** ***Recommendation of Primary reviewer:*** Reply pending **EC Decision:** Reminder will be sent to Principal-Investigator
	Ref. code: 120th ECM II A/P28
6-	Clarification of research proposal entitled "***Efficacy of grid-based dental rubrics as an effective assessment tool when compared to traditional assessment methods for undergraduate students managing a class II carious defect***" submitted by Dr. Rhythm, Prof. Jr. Grade, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 617/Coms&Endo/23 dated 22nd March, 2023.

Previous EC Comment	PI response
Section 8: Consent elements not checked	A written informed consent will be taken from the Patient. A checked section is being attached.
Outcome measures not mentioned	1. Outcome measures for the objective of sensitization of students and faculty will be percentage of students and/or having knowledge about using the grid-based assessment tool using a pre and post test questionnaire. 2. Outcome measure for the objective of inter observer reliability will be the scoring/grading given by instructor for each group.
Statistical plan not mentioned	Data will be analyzed using paired t-test to look for any significant differences in the scoring of the instructor in each group. Pearson's correlation will be applied to test for any significant correlations between the instructors' grading.
On what outcome measure the sample size is calculated: not mentioned.	The sample size is calculated on the basis of variation in student score in both the groups.

The above Comment forwarded to PI was reviewed by Primary reviewer:-
Recommendation of Primary reviewer:

- Title of study (efficacy of grid based rubrics (tool) ….), primary objective (development of a tool) and outcome measures (knowledge of the tool) are discordant.
- Study design is improper to test the tool.

EC Decision: Approval subject to modification. Give changes done in a tabular form.

ganges water phage therapy in H. pylori related dyspepsia: A randomized controlled pilot-trial" submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, King George's Medical University, U.P., Lucknow vide letter no. 791/Med/2023 dated 3rd April, 2023.

Previous EC Comment	PI response
People may be Drinking Ganga water of their own but to ask them to drink under research settings has ethical issues as there are huge reservations about the quality about potability of Ganga water	The Ganga water, tested by a National Level Laboratory will be given to patients.
Will the quality of Ganga water for potability tested and how? Bacterial, E. coli count and other standard methods	Yes, the quality of the Ganga water will be tested by a FSSAI approved lab State Level Lab U.P. Jal Nigam).
What will be the source of water	Ganga river from Rudra prayag
Patient information is very sketchy and not in Hindi. There is mention of 'Cancer' Why?	We have attached the patient information in Hindi.
No mention of Standard Drug Care why?	It has been mentioned already in point no. and table
What are the criteria for dyspepsia and relief from it	It has been added.
Will the study document bacteriophage [quantity and types] in Ganga water	Quantifying or typing of phage is not an aim of our study.
As cases with only dyspepsia will be included, how the improvement or lack of it will be judged	It will be examined using SF-36 and WHO-QOL-BREF (Hindi and English version).
Though not major harm is expected and it may be ethically approved. I have reservation about the study.	A very few chances of any harm could be observed as the SMT (Standard Medical Therapy) and GPT (Ganga Phage Therapy) are opted with all precautions including potability, safety, efficacy etc.
The participants should be clearly informed in the brochure that untreated Ganga water will be given and the risk of gastrointestinal	As potability has been measured and with appropriate count of micro-organism has been ruled out, so there is a less harm to

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

and liver infections cannot be ruled out	subjects.
And this should be monitored before and after [up to 4 months] by pre and post clinical and Lab evaluation and data of gastroenteritis should be maintained	Lab investigations have been added at Day-1 and W-4.
People may be Drinking Ganga water of their own but to ask them to drink under research settings has ethical issues as there are huge reservations about the quality about potability of Ganga water.	The Ganga water, tested by a National Level Laboratory will be given to patients.

The above Comment forwarded to PI was reviewed by Primary reviewer:-
Recommendation of Primary reviewer:

- The documents / certificates from government approved labs providing the water in untreated from Ganga river at Prayag should be submitted about quality of water, bacterial content, etc. To prove that it is potable.
- As far as I know, informally that the water in the river is not of quality to be used as drinkable.
- I consider that this project has ethical issues. Though people may be drinking this water, as medical doctors can not give it to patients because the city municipality treats river water before supplying to the city homes.

EC Comment:

- As above

EC Decision: Revise & re-submit. Give changes done in a tabular form

13. Clarification of research proposal entitled ***"A prospective, interventional, single-arm post-marketing clinical follow-up study evaluating copper IUD insertion procedure using Yanae® associated with crossGlide™ technology in women desiring long-term contraception"*** sponsored by Mr. Ranjit Gaikwad Pregna International Limited submitted by Prof. Anjoo Agarwal, Department of Obstetrics & Gynecology, King George's Medical University, U.P., Lucknow vide letter no. OG/5180/23 dated 24th March, 2023.

Previous EC Comment	PI response
Project is very sketchy.	**Background information** Intrauterine Devices (IUDs) are highly effective (>99%), safe and economical methods of pregnancy prevention[1] (Birgisson et al., 2015). These devices are long acting, reversible, discreet and do not require regular monitoring. Yet, IUDs account for 17% of the global contraceptive market, while other less effective and more expensive methods have a larger share of the contraceptive mix. Increased awareness and use of IUDs could help to reduce the incidence of unplanned or mistimed pregnancy [1,2](Peipert et al., 2011; Birgisson et al., 2015). The most important problem encountered during IUD application is gaining access the cervix and uterine cavity. During the insertion, the healthcare providermust pass the IUD through the cervical canal and insert it into the uterine cavity, owing to cervical ante- or retroflexion of the cervical neck. Cervical flexion is defined as the angle formed by the uterine cervix's longitudinal axis of and the uterine body's longitudinal axis. As a result, this procedure required to be performed by a trained and experienced healthcare provider. Performing cervical traction with a single-toothed tenaculum straightens and immobilizes the cervical neck and uterus to facilitate IUD passage through the cervical canal. This is a common step in the IUD insertion procedure. However, using a single-toothed tenaculum to hold the cervix causes pain, anxiety and bleeding during the procedure. The majority of women reported mild to moderate pain from IUD placement[4] (Brockmeyer, Kishen and Webb, 2008). However, some women remain anxious about the possibility of pain or are more likely to be affected by factors such as nulliparity, or a long time period since delivery. Furthermore, anatomical, cultural or

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			psychological factors can all contribute to a more painful experience[4] (Hubacher et al., 2006). Despite recommendations to improve, such as oral or local medication, on-market IUDs fail to meet users' expectations for pain reduction during this procedure. Healthcare professional concern about difficult and/or painful placement may also discourage discussion of IUD as a contraceptive option, leading women to be counsel on other, less effective methods[5] (Black et al., 2013). CEMAG Care, Pregna International Ltd. And CrossBay Medical collaborated to develop an innovative IUD insertion in order to find a more efficient method of inserting the IUD into the uterus. Yanae® was created by combining the CrossGlide™ insertor and a 380 Y copper IUD. The CrossGlide™ insertor has a conformable inverting membrane that fits around the collapsed IUD when pressurized. The inflatable membrane is designed to pass the cervix, conform to the shape of the uterus and deliver the IUD into the uterine cavity without the use of a tenaculum, cervical distortion, or prior cervical dilation. The IUD can be precisely placed and deployed in the fundus. Yanae® overcomes one of the most significant barriers to acceptance of IUDs, women pain during insertion An in vivo test was conducted to determine the success of Yanae® insertion procedure. Without using a tenaculum, the IUD was inserted in accordance with the Yanae® IFU. An ultrasound was performed right after the procedure to verify the insertion of the IUD. Following IUD insertion, participant pain was evaluated using a VAS-10 cm scale. Both the provider and the participants also completed satisfaction surveys. An ob-gyn not familiar with the technology evaluated Yanae® procedure in 26 women. Of the total number of Yana® IUD insertions, 24 (94%) were successful with the correct fundal placement and did not require the use of a tenaculum neither a hysterometer, to measure the uterine cavity. Two women had unsuccessful IUD insertions: one was due to the Presence of adhesions in the cervical canal (visible by ultrasound), and the other was due

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

			to the provider mishandling the device. Prior to IUD insertion, 19 women reported feeling anxious and stressed, particularly about getting hurt or experiencing pain during the procedure. Following IUD insertion, 14 women reported feeling moderate to light anxiety or stress. Only 17 women correctly completed the pain survey after IUD insertion. On a 10-point scale, the average and median participant pain level during IUD insertion using Yanae® was mild (score 3). All of the women were pleased with the IUD insertion procedure, and 92% (n=22) would recommend Yanae® to a friend or family member. The provider satisfaction survey found that, compared to his regular practice with other IUDs and a standard inserter, Yanae® insertion procedure practice had significantly improved. The usage of Yanae®, according to the provider, may enhance women to accept. **Summary:** A multi-centric, prospective, interventional, single-arm post-marketing clinical follow-up study evaluating copper IUD insertion procedure using Yanae (a Y shape 380 copper IUD effective for 5 years) associated with CrossGlide™ technology in women desiring long-term contraception. This inserter is an inflatable membrane that delivers the copper IUD into the uterine cavity in women who are seeking Long-Acting Reversible Contraception (LARC). **Primary objective** is to validate the efficacy of IUD insertion using Yanae® insertion procedure (without using a cervical tenaculum and without measuring the uterine cavity with a uterine sound). **Secondary objective** to assess Participant Pain score during and after IUD insertion using Yanae® procedure and Participant and provider Satisfaction associated with the use of Yanae® The healthcare provider will explain to the potential participant about the study protocol, mandatory

Chairman, IEC

		follow up (4-6 weeks) and telephonic FUs (6 and 12 months), the benefits and risk to participate wrt study. Site PI/Co PI will obtain participant informed consent and will designate an anonymized PIN. Site PI/Co PI will obtain details of participants before insertion. A transvaginal ultrasound will be performed immediately post-insertion and at on site follow visit (4-6 weeks after insertion) to assess correct placement of the IUD. Adverse device effects (ADE), Adverse Event (AE) and Serious Adverse Event (SAE) will be documented and reported. Insertion procedure questionnaire will be recorded to evaluate the correct placement of the copper IUD. Additional Questionnaires will be used to evaluate participant pain during IUD insertion and provider & participant satisfaction to the device. Endpoint of this study will be Long-term IUD insertion procedure evaluated by IUD placement at follow-up visit (4-6 weeks) and Participant and provider Satisfaction which will be evaluated by a specific survey done immediately after IUD insertion.
	Sample size, inclusion or exclusion of subjects not included.	**Sample Size Determination** Based on data collected in the pilot study in Dominican Republic (26 women) using Yanae® device in similar conditions, the number of correct fundal placement (success) was 24 subjects (92.3%, 95% CI = 74.9% - 99.1%). It is therefore expected a comparable performance in the current study with an expected rate of 90% for the calculation of sample size. The rate of 80% of correct placement is considered unacceptable and should not be compatible with observed data (95% C.I. of the observed rate must excludes the unacceptable limit of 80%). The sample size is based on an exact one-sided comparison with a binomial population. The type one error is set at 0.025 one sided, the unacceptable limit is equal to 0.80 and the expected efficacy is equal to 0.90. The sample size for a power of 95% is 164 women (exact test\) **Inclusion Criteria**: Subjects who meet all the following inclusion criteria may be included: 1. 18 years old or older, in good general health and requesting contraception. 2. Meets World Health Organization (WHO)

		medical eligibility criteria for contraceptive use 3. Desires IUD placement 4. Negative urinary pregnancy test 5. No pelvic inflammatory disease (PID) in last 3 months 6. No contraindications to IUD insertion (see exclusion criteria below) 7. Is willing to complete survey during and after the insertion 8. Is willing to attend follow-up visit at 4-6 weeks after insertion **Exclusion Criteria**: Subjects who met any of the following exclusion criteria will not be included that: 1. Malignant disease of the genital tract 2. Undiagnosed vaginal bleeding, 3. Anaemia, coagulation disorder 4. Pregnancy (known or suspected) 5. Post-partum with no menstrual return (less than 3 months) 6. Recent (less than 3 months) abortion 7. Ongoing or recent (less than 3 months) infection of the genital tract 8. Sexually transmitted disease during the last 12 months (except bacterial vaginitis, repeats herpes infection, Hepatitis B) 9. Pelvic inflammatory disease. 10. Uterine malformation (congenital or acquired) 11. Allergy to copper 12. Known pelvic tuberculosis 13. Benign and Malignant trophoblast disease 14. Distorted uterine cavity 15. Acute purulent discharge 16. Vesicovaginal fistula 17. Third degree uterine prolapse 18. Systemic Lupus Erythematosus with sever thrombocytopenia 19. Ovarian cancer 20. High individual risk of chlamydia and gonococcal infection (partner has current purulent discharge or STI) 21. Heavy/Prolonged or painful menstrual bleeding, endometriosis, severe dysmenorrhea 22. AIDS, without antiretroviral therapy nor access to care

14. Clarification of research proposal entitled "***Efficacy and safety of Tyrosine Kinase inhibitors in downstaging and palliation in patients with advanced papillary thyroid cancer-A Multicenter study***" submitted by Dr. Pooja Ramakant, Additional Professor, Department of Endocrine Surgery, King George's Medical University, U.P., Lucknow vide letter no. ENDOSURG/2023/133 dated 29th March, 2023.

Previous EC Comment	PI response
Approximate Number of subjects is not mentioned.	30, has been added in the relevant column. Similar numbers are expected from other two centers.
Duration of subject participation is greater that duration of study? Explain.	This is a retrospective study, where we will collect 5 years data retrospectively and then analyze the data and write it up for manuscript submission over 1 year.
The proposal has been written in past tense? Has the research already been conducted and is ethical clearance been asked later?	Apologies for the grammatical errors. Relevant changes made in the 'methods' section.
How can one calculate accurate sample size in a retrospective study?	As reported in the study conducted by Kloos R et. al (2009) entitled 'Phase-II trial of Sorafenib in metastatic thyroid cancer', 15% of the patients showed partial response to the treatment. Taking 95% confidence interval, 9% absolute Precision and assuming that at-least 15% will show partial response to Tyrosine Kinase inhibitors, the minimum sample required to be included in the study using single Proportion test is: 61*. *Dhand, N. K., & Khatkar, M. S. (2014). Statulator: An online statistical calculator. Sample Size Calculator for Estimating a Single proportion. Accessed 25 March 2023 at http://statulator.com/SampleSize/ss1P.htm This number has been calculated to get

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	statistically significant results.
What are appropriate statistical tests?	Statistical analysis will be done on Statistical package for social sciences, version 26 IBM, Chicago, USA. Descriptive data will be represented as frequency percentage, mean SD or proportion. Probability (p) will be calculated to test for statistical significance at the 5% level of significance. Progression free time will be reported in the form of mean ± SD as well as median (IQR). Association between categorical variables will be tested using the Chi-Square test; in case, the expected frequency, found to be less than 5 in any particular cell, Fischer Exact test will be used. A minimum 95% confidence interval or p value <0.05 will be considered as statistically significant. Multivariate analysis using logistic regression will be performed for all the variable found significant in univariate analysis. A p-value of 0.05 will be taken as statistically significant.
How will data of different endpoints be calculated from in-patient records? Most patients don't need admission at every point of contact.	Patients receiving TKIs are admitted at every cycle of treatment and only after clinical history, examination and relevant investigations the next dose of medicines is given to the patient. Hence, data of most endpoints will be available from in-patient records.
How will the safety Profile of TKIs be assessed?	Based on the history, examination findings and relevant investigations like complete blood counts, liver and kidney function test, ECG and ECHO reports, which are done before starting every cycle of TKI.
Which version of RECIST will be used?	RESCIST 1.1, Correction done in the 'methods' section
Define lost to follow up (as mentioned in exclusion criteria)	Those who have defaulted treatment and have not been reachable via telephone despite 2-3 attempts.
Residents cannot be included as co-PIs.	Necessary changes made for residents of KGMU, however similar changes cannot be applied for resident doctors of other institutes. Dr. Ranjith Cheriyan Philip is a resident doctor working in CMC, Vellore and his name will be added in the study as per their wish.

15. Clarification of research proposal entitled "***Morphogenic and Morphometric study of coronary sinus in cadaveric heart***" submitted by Mr. Rakesh Mishra, Ph.D. Scholar under the guidance Prof. Rakesh Kumar Diwan, Department of Anatomy, King George's Medical University, U.P., Lucknow vide letter no. 01/ANAT/23 dated 1st April, 2023.

Previous EC Comment	PI response
Justification of sample size needs to be added.	• We are using 50 cadaveric hearts as a sample size which gives statically significant result. • From Previous articles, related to our study, used 50 cadaveric hearts which gives statically significant result. **Bcegum Zabina etal |2017| (14**
Innumerate the parameters to be studied and their anticipated statistical analysis.	**Parameters;** 1. To observe Presence or absence of coronary sinus 2. To observe the Location of coronary sinus in relation to left posterior atrioventricular sulcus 3. To observe Shape of coronary sinus either funnel or tubular 4. To measure Length of coronary sinus: External and Internal both 5. To measure Width of coronary sinus at its beginning, at the point of entry of middle cardiac vein and at its termination 6. To observe the Length of coronary sinus covered by muscles of left atrium 7. Correlate Length and Width of heart with length of coronary sinus 8. To measure the length of left posterior atrioventricular sulcus 9. Relationship between Length of coronary' sinus and length of left posterior atrioventricular sulcus.

Hospital, Era University, Lucknow & Co-Guide Prof. Vijay Kumar, Head, Department of Surgical Oncology, King George's Medical University, U.P., Lucknow vide letter no. SONS/650/23 dated 10th April, 2023.

Previous EC Comment	PI response
Principal Investigator is a Ph.D. student from an outside Institution.	Yes, the Principal Investigator (PI) is a Ph.D. student enrolled in Era University. The study had been designed as a collaborative Project with KGMU with which a Memorandum of Understanding (MoU) has been signed. As the breast cancer samples (Invasive Ductal Carcinoma, IDC) for the co-culture experiments would be obtained from Surgical Oncology Department, KGMU. Therefore, Dr. Vijay Kumar, Prof. and Head, the Department of Surgical Oncology, KGMU has been included in the study as a co-guide (photocopy of synopsis defended letter attached as Annexure 1 for ready reference).
It is mentioned that the *Withania somnifera* plant will be verified and reference specimens will be deposited at Integral University, Lucknow, however, there is no involvement of Integral University in the project (no Co-Guide has been included from there).	The present study is an in silico and in vitro study (preclinical) where the efficacy of WS plant extract would be determined in vitro on cancer cell lines. Before in vitro analysis, the plant needs to be verified by a competent taxonomist from any institute. Integral University, Lucknow providers a paid-basis service where they identify and verify the plant specimen and save the deposited specimen for future reference. Therefore, there is no need for the assignment of a co-guide from Integral University. Additionally, the authors have verified the plant specimen and obtained the certificate for the same (photocopy of the certificate of plant identification attached as Annexure 2 for ready reference).
Dose of *Withania somnifera* not mentioned.	As suggested by the ethical committee Members, the PI has included the effective dose range at which the study would be performed (photocopy of PhD proposed performa is attached as Annexure 3 for ready reference).
Patient to be included in the study are not described and no inclusion or exclusion criteria are mentioned.	The present study is an in silico and in vitro pre-clinical study with no involvement of studies on patients. However, for in vitro co- culture experiments, IDC samples would be needed to isolate Cancer-Associated Fibroblasts (CAFs). For this, the authors have added the inclusion and exclusion criteria in the proposal as directed by the ethical committee members (photocopy of PhD proposal performa is attached as Annexure 3 for ready reference).

18. Clarification of research Protocol no. DRL-IND-NDA01-DXMF/2019 entitled "***A prospective, multicenter, randomized, open label, active controlled, phase II study to evaluate the efficacy, safety, and tolerability of fixed dose combination (FDC) of doxycycline hyclate and metformin hydrochloride (10%W/W+1%W/W)gel in the treatment of adults with periodontitis***" sponsored by M/s Dr. Reddy's Laboratories Ltd submitted by Prof. Umesh Pratap Verma, Department of Periodontology, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. PD/CT/02/23 dated 22nd March, 2023.

Previous EC Comment	PI response
Sections on vulnerable and special groups have both been ticked. Please explain.	In the Annexure 07 section on vulnerable is ticked inadvertently, only special age group 18 to 65 years subjects are enrolled in the study. After the correction Annexure 07 copy is attached for your reference.
ICF does not have details of the PI.	Sponsor does not use the site specific ICF in this study. Study coordinators complete the PI and Institutional EC details by hand written during the ICF Consenting processes. ICF English and Hindi Version copy is attached with the PI and EC details
Details regarding Previous use of Metformin in gel form for treatment of periodontitis are lacking.	• Efficacy and Safety of Metformin in Gel formulation in several reported studies.[1,2,3,4] • In all studies shown above, local administration of Metformin following Scaling and Root Planning resulted in

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	better clinical (in terms of gain in Clinical attachment loss, Reduction in Probing Depth) and radiographic parameters (Reduction in Intrabony defects) compared to Scaling and Root Planning alone According to results obtained in the study by Pradeep et al., 1% MF is the optimal concentration in the management of periodontitis.
Please clarify if Metformin's clinical use as gel in adults with periodontitis is established or not.	Safety and Efficacy of Metformin gel is well established in clinical trials[1,2,3,4] and Preclinical studies.[5,6] Topical Product Doxycycline gel 10% was already approved for periodontitis by USFDA. However to evaluate detailed efficacy of metformin in combination with Doxycycline, Dr. Reddy's have come up with said Phase II clinical trial of Doxycycline + Metformin Gel.

I- ADR of research proposal entitled ***"Indian trial of Tranexamic acid in Spontaneous intracerebral haemorrhage (INTRINSIC TRIAL)*** submitted by Dr. Praveen Kumar Sharma, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter no.576Neuro/22 dated 22nd November, 2022.

Patient ID & age and gender: S-45-3-307/59 years/Male
Patient Diagnosis: Right Ganglio-capsular intracranial bleed with mass effect with IVE Hypertension.

Patient enrollment date: 18.11.2022

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Patient follow up under study-Expired on 21-11-2022 during hospital stay.
Follow up visit completed-Expired
Planning on visit- 6th Month
SAE detected on date: 21-11-2022
Follow up visit remaining: Expired
24 hours, notified to EC, Sponsor-Yes
14 days analysis report submitted to EC-NA
Subject History:

Subject S.P.M.59 years/Male, known case of CAD post PTCA and Hypertension, admitted on 18th November, 2022 in the Emergency medical ward with c/o left hemiparesis and altered sensorium with GCS score of 7 and diagnosed to have right intracerebral (Gangliocapsular) bleed, volume approximately 50.9 ml. Since, he was fulfilling inclusion criteria so he was recruited after written informed consent from family and randomized to experimental arm and received tranexamic acid (2 gm 1/V bolus). He was kept in emergency medical ward ICU had received treatment with parenteral antihypertensive to lower blood pressure, decongestive therapy (Inj Mannitol) and intravenous fluids but his GCS score dropped to 4 at about 2 pm so he underwent elective intubation and repeat NCCT head which showed haematoma expansion(volume approx, 64.4 ml). Subsequently, he was on ventilator support and neurosurgery opinion was taken who advised for surgery, but family members gave negative consent. So, he was continued on medical treatment. His deteriorating condition was related with haematoma expansion and treatment options and prognosis were discussed with the family members. He continued same state and by next day his GCS score dropped further to 3. The NCCT head at 24 hours after admission showed further expansion of haematoma volume (67.5 ml). Further, His blood pressure started falling so mannitol was stopped and he was put on initially single and later double ionotropic support due to falling blood pressure. He suffered a cardiac arrest, was given CPR but could not be revived and declared dead at 2.01 pm on 21.11.2022. The immediate cause of death was supposed to be large intracerebral bleed and its complications only.

Recommendation of Primary reviewer:

- The subject was enrolled on 18th November, 2022 when the subject was brought to the hospital with intra-cerebral bleed.
- SAE occurred on 21st November, 2022 during the same admission as recruitment due to expansion of intra-cerebral hematoma and non-consent of LAR to allow surgery.

SAE doesn't appear to be related to the study but due to the expanding intra-cerebral hematoma perse.

ADR sub Committee Comment:

- No casual association & no compensation requird.

ADR sub Committee Decision: Noted

2-	ADR of research proposal entitled ***"Indian trial of Tranexamic acid in Spontaneous intracerebral haemorrhage (INTRINSIC TRIAL)*** submitted by Dr. Praveen Kumar Shukla, Additional Professor, Department of Neurology, K.G's Medical University, U.P., Lucknow vide letter nos. 535/Neuro/22 dated 22nd October, 2022 & 550/Neuro/22 dated 2nd November, 2022. **Patient ID & age and gender:** S-45-3-121/40 years/Male **Patient Diagnosis:** Left Ganglio-capsular intracranial bleed with mass effect with IVE Hypertension. **Patient enrollment date:** 07.10.2022 **Patient enrollment date-**Intervention **Patient follow up under study-**Yes **Follow up visit completed-**No **Planning on visit-** Yes **SAE detected on date:** 20-10-2022 **Follow up visit remaining:** Yes (90) **24 hours, notified to EC, Sponsor-**Yes **14 days analysis report submitted to EC-**No**Subject History:** Subject A.G.40 yrs/Male, know case of Diabetes Mellitus Type-2, Hypertension, admitted on 07.10.2022 in the Emergency medical ward with c/o right hemiparesis and altered sensorium diagnosed to have right intracerebral (Gangliocapsular) bleed, volume approximately 50 ml. He was randomized to experimentalarm and received tranexamic acid (2 gm 1/V bolus). He was transferred to Neurology stroke ward on 08.10.2022 and received treatment with Inj. Mannitol, Intravenous Fluids, Inj Piperacillin+tazobactam (due to raised counts on CBC) and Insulin for blood sugar management. He gradually improved and started accepting orally continued to have motor aphasia. The nasoganstric tube and indwelling catheter were removed on eighth day of admission and he was discharged on 10th day (17.10.2022). As per the family members he remained fine for one day at home subsequently from 19.10.2022 his oral intake started decreasing and he became drowsy, his urine output also decreased, and he became developed anuria next day, so we were contacted by the family members so, Patienwas called for readmission. Now, he has been diagnosed as sepsis with shock with acute renal injury. He is currently under treatment. ***Recommendation of Primary reviewer:*** • SAE (Hospitalization due to drowsiness and anuria and sepsis) is likely due to disease outcome (Left Ganglio-capsular intracranial bleed with hypertension and T2DM) and not due to intervention (inj. Tranexamic acid ,IV ,bolus) as patient was randomized in treatment arm on 07-10-2022 and SAE occurred on 19-10-2022,almost 10 days have elapsed after taking intervention, therefore SAE seems not to be related to intervention.

	• Causal relationship can not be established and no compensation is required as patient was properly treated in hospital and discharged on 01-11-2022 in improved state with the instructions to come to OPD after 2 weeks for review. • (Document /Email regarding, notification to EC within 24 hrs. is not attached). **ADR sub Committee Comment:** • Causal relationship can not be established and no compensation is required as patient was properly treated in hospital and discharged on 01-11-2022 in improved state with the instructions to come to OPD after 2 weeks for review. **ADR sub Committee Decision:** Noted ***Ref. code: 115 ECM IIA/P5***
3.	ADR of research proposal entitled ***"Comparision of the efficacy of a 7 day versus a 14 day course of Intravenous antibiotics in the treatment of uncomplicated neonatal bacterial sepsis: a randomized controlled non inferiority trial"*** submitted by Prof. Mala Kumar, Department of Paediatrics, K.G's Medical University, U.P., Lucknow vide letter no. 2787/Ped/22 dated 10th November, 2022 preliminary email dated 11th Oct, 2022 at 2:14 PM.. **Patient ID & age and gender:** 0621/1 month and 1 day/male **Patient Diagnosis:** 28-30 week premature very low birth weight (VLBW0 baby with respiratory distress syndrome (RDS) and early onset sepsis (EOS) **Patient enrollment date:** 08-10-2022 **Patient enrollment in arm-**14 day trial arm **Patient follow up under study-**35 days **Follow up visit completed-**19-11-2022 **Planning on visit-** Still hospitalized **SAE detected on date:** 23-10-2022 **Follow up visit remaining:** 17 days **24 hours, notified to EC, Sponsor-**29-10-2022 **14 days analysis report submitted to EC-**09-11-2022 **Subject History:** The neonate was 28:30 weeks premature appropriate for gestational age with very low birth weight (1200gm). Baby was suspected of respiratory distress syndrome (RDS) with early onset sepsis (EDS), Baby was started on bubble CPAP and given surfactant. Antibiotics Ampicillin BD and Gentamysin OD were started from 8th October to 10 October and then from 10 October onwards on Amikacin OD (after blood culture sensitivety was available). After completion of 7 days of sensitive antibiotic administration baby was well and then we randomized. Randomization came to be in 14 day trial arm. The last dose of Amikacin was given on 22nd October, 2022. The next day baby became lethargic and had gastric haemorrhage. Sepsis screen was sent on 23rd

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	October, 2022 which turned out to be negative (CRP = 0.59), blood culture sample was misplaced and CSF examination was normal. Piptaz was started from 23rd October, 2022 but condition did not improve. Hemoglobin (Hb) also dipped to 8.8 g/dL so PRBC transfusion was done on 24 October after which Hb improved to 13.2g/d/L. Repeat CRP was sent on 26th October, 2022 which turned out positive with value of 13.32. Blood culture sample was sent on 27th October which came sterile on 30th October, 2022. One more transfusion of PRBC was done on 28th October. However due to clinical deteoration in the form of Respiratory distress from 27th October, 2022 antibiotics were upgraded to Meropenem and the next day Vancomycin was also added. Baby was put on NIV mode of ventilation on 28th October, 2022. On 2 November, 2022 repeat CSF examination was normal and CSF culture came sterile on 4 November, 2022. Baby gradually improved and at present is stable on room air and mother's breast feed (MBF) with ongoing antibiotics. ***Recommendation of Primary reviewer:*** • SAE (continued hospitalization due to lethargy and gastric hemorrhage) is likely due to disease outcome (LBW with Sepsis and Respiratory distress syndrome) and not due to intervention (parenteral antibiotics) as patient was enrolled on 08-10-2022 and randomized in 14 day trial arm and after 7 days of parenteral antibiotics baby was well. SAE was detected on 23-10-2022 after completion of parenteral antibiotic (Amikacin) course (i.e. on 22-10-2022).Patient has received transfusion of PRBC two times (on 24th and 28th October) due to low Hb levels .Patient is still in hospital and under treatment due to deterioration of his clinical condition ,which is now stable. • Causal relationship can not be established and as patient is still in hospital at the site and getting proper management and is gradually improving and presently is stable on room air and mother's breast feed, so no compensation is required. • (Document/Email regarding, notification to EC within 24 hrs. is not attached). **ADR sub Committee Comment:** • Causal relationship can not be established and as patient is still in hospital at the site and getting proper management and is gradually improving and presently is stable on room air and mother's breast feed, so no compensation is required. **ADR sub Committee Decision:** Noted ***Ref. code: 100 ECM IIA/P6***
4.	ADR of research proposal entitled ***"A multicenter, single arm, open label,phase 4 study to evaluate the safety and efficacy of Vedolizumab in Indian patients with Ulcerative Colitis and Crohn's disease"*** submitted by Dr. Ajay Kumar Patwa, Additional Professor, Department of Medicine, K.G's Medical University, U.P., Lucknow vide letter no. 2214/Med/22 dated 26th November, 2022. **Patient ID & age and gender:** TAK-23-182 **Patient Diagnosis:** UC

Patient Diagnosis: Left basal ganglia bleed with hypertension.

Patient enrollment date: 05-12-2022

Patient enrollment arm-Intervention arm
Patient follow up under study-Yes.
Follow up visit completed-No
Planning on visit- Yes
SAE detected on date: 12-12-2022
Follow up visit remaining: Yes (90 days)
24 hours, notified to EC, Sponsor-Yes
14 days analysis report submitted to EC-NA

Subject History:

A letter was received in the office of the Ethics Committee on 15th December, 2022 vide letter no.445/Neuro/22 dated 14th December, 2022 by PI, the subject RS, 50 years/Male, known case of hypertension, dyslipidemia not on medication presented with complaint of slurring of speech as well as right upper and lower limb weakness. System onset was at 11.00 AM on 5th December, 2022 and the patient was admitted at 12:41 PM in neurology emergency. At presentation, the heart rate was 65 BMP, BP was 191/122 and GCS was 15 and diagnosed to have left basal ganglia bleed with a volume of approximately 5.09 ml. Since he was fulfilling inclusion criteria so he was recruited after written informed consent from family and randomized to the intervention arm received tranexamic acid (2gm 1/V bolus). He was kept in neurology and received treatment with antihypertensive to lower blood pressure. **He was discharged on the 6th day (10/12/2022).** As per family members. He remained fine for one day at home later the patient developed chest pain and pain radiating to left forearm since one hour. ECG suggestive of Inferior wall MI associated with Right ventricle infarction. Patient was admitted immediately to Cardiology ICU on 12th December, 2022. Conservative management was followed and patient is stabilized on 12th December, 2022. He is currently under treatment.

Also, A letter was was received in the office of the Ethics Committee on 15th December, 2022 vide letter no.607/Neuro/22 dated 15th December, 2022, which in mention by the PI the subject was recovered completely from the event which had been reported to you and he is being discharged on 14th December, 2022. His discharged summary and a copy of the resolution are attached with this letter.

After that, A letter was received in the office of the Ethics Committee on 3rd January, 2023 vide letter no.01/Neuro/23 dated 3rd January, 2023 by PI. The subject was discharged from the PI side on 10th December, 2022 and his further follow-up is due on

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	5th March, 2023 (90th day visit). As per his proxy on today (27-12-2022) his mRS& GCS is 3 and 15 respectively with distal weakness of right upper limb and able to walk without assistance. On 12th December, 2022, patient developed chest pain, ECG suggestive of inferior wall MI associated with right ventricle infarction for which the PI had reported to EC. On today's follow-up he has been advised to continue medication. The PI shall update the EC further about his health after following him up on the above said date. ***Recommendation of PR:-*** SAE (Hospitalization due to chest pain) is likely due to disease outcome (CVA Hemorrhage with Rt. Sided hemiparesis with Inferior wall / Rt. Ventricular / Posterior wall MI) and not due to intervention (inj. Tranexamic acid ,IV ,bolus) as patient was randomized in treatment arm on 05-12-2022 and SAE occurred after one day i.e. on 12-12-2022. Causal relationship can not be established. SAE is unlikely related to Intervention as Pt was discharged just one day back (10-12-2022) after getting treatment for Left basal ganglia bleed and was again admitted in hospital (12-12-2022). As he was given proper treatment after admission and was discharged on 14th December after complete recovery ,therefore no compensation is required . (Document /Email regarding , notification to EC within 24 hrs. is not attached) **ADR sub Committee Comment:** • Causal association not established no compensation required. **ADR sub Committee Decision:** Noted ***Ref. code: 115 ECM IIA/P5***
6.	ADR of research proposal entitled ***"Comparision of the efficacy of a 7 day versus a 14 day course of Intravenous antibiotics in the treatment of uncomplicated neonatal bacterial sepsis: a randomized controlled non inferiority trial"*** submitted by Prof. Mala Kumar, Department of Paediatrics, K.G's Medical University, U.P., Lucknow vide letter no. 3190/Ped/2022 dated 23rd December, 2022. **Patient ID & age and gender:** 0621-132/1 year and 2 month/Male **Patient Diagnosis:** Prematurity with appropriate for gestational age with low birth weight with respiratory distress syndrome with perinatal asphyxia with neonatal hyperbilirubinemia with early onset sepsis. **Patient enrollment date:** 25 September 2021 **Patient enrollment in arm**-7 Day trial Arm **Patient follow up under study**-35 days

(Shally Awasthi)

Follow up visit completed-11-11-2021
Planning on visit- Discharged
SAE detected on date: 17-10-2021
Follow up visit remaining: 0 days
24 hours, notified to EC, Sponsor-30-11-2022
14 days analysis report submitted to EC-30-11-2022
SAE initials: B/O SS
SAE term: Sepsis (Pneumonia)
Course of event: Randomization in NICU
Causality: No
Outcome: Discharged

Subject History:

A letter was received in the office of the Ethics Committee on 23rd December, 2022 vide letter no.3190/Ped/2022 dated 23rd December, 2022. The PI informed to the EC that the baby was admitted with above mentioned complaints. Patient was managed with ventilator support, warmer care, vital monitoring, iv antibiotics and ionotropes. Patients were intubated 1/v/o low GC, bradycardia and poor respiratory efforts. Relevant investigations were sent. First sepsis screen came out to be negative but 1/v/0 clinical deterioration repeat sepsis screen was done which came out to be positive. Blood culture was sterile; iv antibiotics were added and upgraded a/t culture sensitivity. Swab for respiratory viruses were sent which was positive for RSV. During the course of hospital stay patient condition improved and ventilator support was gradually weaned off. Currently baby is hemodynamically stable, maintaining saturation on room air, taking MBF well, passing stool and urine normally, antibiotic course has been completed, therefore being discharged with advise to follow up in pediatric OPD on Wednesday after taking prior appointment on ors.gov.in

Recommendation of PR:-

SAE (hospitalization) is likely due to disease outcome (LBW with Sepsis and Respiratory distress syndrome) and not due to intervention (parenteral antibiotics) as patient was enrolled on 08-10-2022 and randomized in 14 day trial arm and completed follow up visit ,after 14 days of parenteral antibiotics baby was well. SAE was detected on 23-10-2022 after completion of parenteral antibiotic course(i.e. on22-10-2022). Patient is now hemodynamically stable , maintaining saturation on room air and antibiotic course has been completed ,therefore being discharged with advice to follow up in pediatric OPD.
Causal relationship can not be established and as patient was given proper management

(Shally Awasthi)

(Alok Dhawan)
Chairman, IEC

	consent from the family and randomized to the control arm. He was kept in the emergency medical ward ICU had received treatment with parenteral antihypertensive to lower blood pressure, later the patient was diagnosed with Hepatitis B via HbsAg surface antigen test on ELIZA. This infection is unrelated to treatment protocol and the patient wasn't previously aware of his status. On admission, routine labs reported hepatitis B rapid antigen test positive. Since the sensitivity and specificity of this test is low, hence ELIZA testing was done. The report arrived on 9th December, 2022. Gastroenterology and medicine reference have been done. Antiviral therapy has been initiated. After that, a letter was received in this office on 30th December, 2022 vide 651/Neuro/22 dated 30th December, 2022. It was informed by the PI that subject VK was discharged from his side on 10th December, 2022 and his further follow-up is due on 5th March, 2023 (90th day visit). As per his proxy on today (27th December, 2022), It is observed that his mRS & GCS is 4 and 15 (E4V5M6) respectively with residual right hemiparesis and unable to walk and attend to his own bodily needs without assistance. This patient was diagnosed with hepatitis B positive on 9th December, 2022 for which PI had reported to EC. On today's follow-up, he has been advised to continue follow-up and treatment for hepatitis B at medical gastroenterology. The PI shall update you further about his health after following up on the above-said date. ***Recommendation of PR:-*** SAE (Hospitalization) is likely due to disease outcome (Left basal ganglia bleed with IVE hypertension) and Hepatitis B infection and not due to intervention, as patient was enrolled in control arm on 26-11-2022. Causal relationship can not be established and no compensation is required as patient was properly treated in hospital for complication and Hepatitis B infection which was detected on 09-12-2022 and was unrelated to protocol. He has been advised to continue follow up. (Document /Email regarding , notification to EC within 24 hrs. is not attached) **ADR sub Committee Comment:** • Causal relationship can not be established and no compensation is required as patient was properly treated in hospital for complication and Hepatitis B infection which was detected on 09-12-2022 and was unrelated to protocol. He has been advised to continue follow up. **ADR sub Committee Decision:** Noted ***Ref. code: 115 ECM IIA/P5***

	The site person have made a scheduled monthly follow up call to subject on 11th November, 2022 at 11:00 hrs. Subject's LAR informed him that subject passed away on 25th October, 2022 at around 08:00 hrs. LAR informed that subject was feeling down from last few days and had no other major symptoms, on 24th October, 2022 at 21:00 hr. He had taken medicine, skipped his dinner and then slept. Subject did not awaken after that and in morning he found dead. As he was not admitted anywhere, no documents are available and No autopsy was done. ***Recommendation of Primary reviewer:*** • The subject was enrolled on 18th November, 2022 when the subject was brought to the hospital with intra-cerebral bleed. • SAE occurred on 21st November, 2022 during the same admission as recruitment due to expansion of intra-cerebral hematoma and non-consent of LAR to allow surgery. • SAE dose'nt appear to be related to the study but due to the expanding intra-cerebral hematoma parse. **ADR sub Committee Comment:** • SAE dose'nt appear to be related to the study but due to the expanding intra-cerebral hematoma parse. **ADR sub Committee Decision:** Noted ***Ref. code: 60th ECM IIA/P13***

Subject History:

A letter was received in the office of the Ethics Committee on 12th January, 2023 by PI, the subject LAR informed to PI that the subject passed away on 31st December 2022 at 3:00 PM. The subject had complaints of breathlessness and discomfort since the last few days she collapsed at home. Local practitioner was called and he confirmed subject's death. No hospital records are available and no autopsy was done as she expired at home. The PI does not have the exact records to ascertain the cause of death.

Recommendation of PR:-

Enrolment date 21-04-2022. 6th month follow up was due in October which was missed. SAE occurred on 31-12-2022 and was reported on 03-01-2023.(late) Clarification may be sought on why the 6 month follow up was skipped and why was the SAE reported late if it was detected on 31-12-2022.

ADR sub Committee Comment:

- Why was 6 month follow-up missed?
- Why SAE reported late?

ADR sub Committee Decision: Noted

(Alok Dhawan)
Chairman, IEC

	India where this study will be performed.	where the study has started. 1. Terna Medical College and Hospital, New Mumbai 2. Manipal Hospital, Delhi 3. Maulana Azad Medical College, New Delhi
	Inclusion criteria-Age specificity of Patients operated upon not given.	Patients of 18 years and above will be included. We are not collecting any patient related data, it's just an OT process observational study. So, it qualifies for a consent waiver.
	Sample size-PI written, Total number of cases performed daily in selected OTs at each of the collaborating secondary & Tertiary Health care centers in India, but in SOP-Checklist-Total no. of subjects given is-500 from which 50 cases at Surgical Oncology Department, KGMU-Please clarify whether it is a Pilot study and if not then give Sample size calculation.	It is a pilot study; therefore no formal sample size calculation is required. We aim to recruit approximately 50 patients during the study period from the 2 OTs of the Department of Surgical Oncology.
	ICF regular attached- If all age patients operated upon will be taken then Guardian consent/Child Assent form should also be attached.	We are not collecting any patient related data, it's just an OT process observational study. So, it qualifies for a consent waiver. However, in our department we only operate Adult Cancer Patients. So only patients above 18 years will be included.

The above Comment forwarded to PI was reviewed by secondary reviewer:-
Recommendation of Secondary reviewer:-

- Letter of sponsor/Collaboration from Terna Medical College & Hospital/BARC Hospital, HBNI University, Mumbai still not given by PI (He instead attached the IEC letter send to Dr. Bhakti Sarang by IEC, Terna Medical College) PI is requested to attach the said document.

The above Comment forwarded to PI:-Reply pending by PI.
EC Decision: Reminder will be sent to the Principal-Investigator

Ref. code: 123rd ECMIB/P4

II-A	**New proposals**
1.	Research proposal entitled ***"Biomarkers for chemoresistance in oral squamous cell carcinoma (OSCC)"*** submitted by Prof. Seema Gupta, Department of Radiotherapy, King George's Medical University, U.P., Lucknow vide letter no. 248/RT/23 dated 15th March, 2023. ***Recommendation of primary reviewer:*** • In the Materials and methods section the name of the candidate gene Primer is not mentioned. • Sample size calculation not given. **EC Comment:** As above **EC Decision:** Approval subject to modification. Give changes done in a tabular form. ***Ref. code: 123rdECM IIA/P1***
2.	Research proposal entitled "*A salivary metagenomic analysis of microbial diversity in*

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

	children with severe early childhood caries" sponsored by CST UP submitted by Dr. Vijay Kumar Shakya, Additional Professor, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 631/Cons & Endo/23 dated 27th March, 2023. ***Recommendation of primary reviewer:*** • Approved **EC Decision:** As above ***Ref. code: 123rd ECM IIA/P2***
3.	Research proposal entitled **"*Effect of prospective bilateral superficial cervical plexus nerve block on post-thyroidectomy headache and cervical pain: A randomised controlled trial*"** submitted by Dr. Pooja Ramakant, Prof. Junior Grade, Department of Endocrine Surgery, King George's Medical University, U.P., Lucknow vide letter no. ENDOSURG/2023/21 dated 13th January, 2023. ***Recommendation of primary reviewer:*** • Compensation for injury: What if someone has allergic reaction to drug? • Objectives: Very vague-What if someone has allergic reaction to drug? • Elements of RCT need to be mentioned. • Data analysis: What tests? • Implications: accurate dosage…Dosage is not being studied. • Why subject participation for 4 months? **EC Comment:** • Senior Resident cannot be Co-Principal-Investigator. • Objectives very vague-What is the measure of efficacy? **EC Decision:** Revise & re-submit. Give changes done in a tabular form. ***Ref. code: 123rd ECM IIA/P3***
4.	Research proposal entitled **"*Evaluation of high risk proteins involved in breast cancer and their correlation with tumor aggressiveness and chemotherapy response: A retrospective study*"** sponsored by CSIR-CDRI submitted by Dr. Sumaira Qayoon, Additional Professor, Department of Pathology, King George's Medical University, U.P., Lucknow vide letter no. 396/23 dated 31st March, 2023. **EC Comment:** • Annexure one needs to be filled up such as for 'risk and benefit', ' data monitoring ' , 'compensation for injury' etc. • It is indicated by astrix that written consent will be taken. Kindly clarify since consent waiver form is also attached. • Kindly indicate other centers involved in this multicenter study . • The first objective indicates that metanalysis will be undertaken to shortlist six high risk genes while budget indicates that immunohistochemistry will be undertaken from the very beginning of the study. Have those six genes been identified? If yes, then kindly mention them and if not then the budget quoted may change depending upon the antibody cost of specific gene that needs to be assessed. Kindly clarify. • Regarding the third objective to correlate protein expression with chemotherapeutic response, kindly mention the clinical parameters that need to be recorded and the RCB scoring. In addition also attach the data-sheet-proforma that will be used to record the various observations.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Dated 19th April, 2023

	• The second objective states a comparison between TNBC versus non-TNBC patients. What would be the sample size of each group- 100 or 200? Kindly state. • Also mention clearly in methodology section as how will you approach each objective clearly. • What are the chronic immunological disorders that need to be excluded ? Kindly state. • It is stated in hypothesis section that "in a related study m-RNA expression will be analyzed in fresh biopsy tissue sample" Is this ethically approved or will it be submitted? Since this seems to be a prospective study, the current submission being retrospective (based on blocks) seems different. Kindly clarify. • Kindly attach pre-designed proforma as indicated in data management section. • Briefly mention the summary of anticipated statistical analysis **EC Decision:** Revise & re-submit. Give changes done in a tabular form. ***Ref. code: 123rdECM IIA/P4***
5.	Research proposal entitled "***Comparative study between the outcome of endoscopic type I tympanoplasty (Double Door Technique) and microscopic type I tympanoplasty (Interlay Technique)***" submitted by Dr. Rajat Jain, Assistant Professor, Department of Otorhinolaryngology & Head & Neck Surgery, King George's Medical University, U.P., Lucknow vide letter no. 1156/ENT/23 dated 16th March, 2023. **EC Decision:** Approved ***Ref. code: 123rdECM IIA/P5***
II-B	**New Ph. D. proposal**
1.	Research proposal entitled "***Role of neuroinflammation in the progression of neurodegenerative disorders and identification of novel drug targets***" submitted by Dr. Saniya Ansari, Ph.D Scholar under the guidance Prof. Shailendra Kumar Saxena, Department of Center for Advance Research, King George's Medical University, U.P., Lucknow vide letter no. CFAR/1080/23 dated 28th February, 2023. ***Recommendation of Primary reviewer:*** • Details of sample size calculation shall be provided. • Age of the subjects to be included in the study not mentioned. • It is not clear from the contents if CSF samples will also be collected from the controls too? • Inclusion and exclusion criteria for the controls not given. • Prof. Hardeep Singh is mentioned as an Expert and he will also be participating in the study by recruiting patients. How can an expert participate in the study? **EC Comment:** As above **EC Decision:** Revise & re-submit. Give changes done in a tabular form ***Ref. code: 123rdECMIIB-Ph.D/P1***
2.	Research proposal entitled "***Deciphering the role of novel metastatic genes in epithelial to mesenchymal transition of oral squamous cell carcinoma cell (OSCC)***" submitted by Mr. Dharmendra Kumar, Ph.D. Scholar Batch 2020 under the guidance Dr. Satyendra Kumar Singh, Additional Professor, Department of Center for Advance Research, King George's Medical University, U.P., Lucknow vide letter no. CFAR/1088/23 dated 13th

	March, 2023. **EC Decision:** Approved ***Ref. code: 123rd ECMIIB-Ph.D/P2***
II-B	**Women Scientist**
1.	Research proposal entitled "***Role of nasal douching technique in the management of allergic rhinitis***" sponsored by DHR submitted by Dr. Shruti Agnihotri through her Mentor Prof. Surya Kant, Head, Department of Respiratory Medicine, King George's Medical University, U.P., Lucknow vide letter no. 260/ResMed/23 dated 3rd March, 2023. ***Recommendation of Primary reviewer:*** • The objective indicates nasal douching only while methodology also includes Pranayam (yoga). Kindly clarify. • The second objective estimates the effect of anti-allergic medication while case study form does not record any institution of medication. Kindly rectify • Similarly the fourth objective estimates effect on quality of life but no such recording is shown in case study form. • Kindly clarify first two points of inclusion criteria. It seems that patients of allergy rhinitis with or without asthma both will be included. Mention clear-cut the diagnostic criteria. • Kindly show the steps of sample size calculation to make it more clear • In data management and analysis kindly mention 'all the parameters' and "different types of intervention at different times". • The technique of nasal douche used in the study may be briefly described in methodology section. • As per the section on "benefit and significance of study" will a 30 minute yoga practice be done in every patient- If yes, then include this in methodology before also. • What would be included in the standard medical treatment? kindly brief. **EC Comment:** As above **EC Decision:** Revise & re-submit. Give changes done in a tabular form ***Ref. code: 123rd ECMIIB-WS/P1***
II-C	**Review of New Drug Trial**
1.	Research protocol no.RCLS-CIP-01 entitled "***A prospective open-level, single arm, interventional, multicentric, pilot study to evaluate the safety and effectiveness of OZYN-D, a novel intraosseous device for delivery of medications and fluids***" sponsored by M/s Rcupe Life Sciences Pvt. Ltd. submitted by Prof. Sandeep Tiwari, Department of Trauma Surgery, King George's Medical University, U.P., Lucknow, vide letter no. TS/188/2023 dated 13th March, 2023. ***Recommendation of Primary reviewer:-*** • In SOP-Checklist-point-3–Clinical Trials–(ii)-is this device approved and marketed in India–PI mentioned-NA–PI is required to clarify • Point -6- Confidential handling of data – not ticked YES • Insurance to be renewed (it is upto-21-04-2023) • DCGI acknowledgment and permission letter awaited (if required)

OG/01/23 dated 1st April, 2023. **Previous PGTSC Comment:** • The study is on the evaluation of Quality of Life (QOL) instrument. • There is checklist for evaluating such scales. • Where the items come from? Were they assessed for (i) comprehension, (ii) lack of ambiguity? • Was the scale checked for internal consistency: Does it have good test-retest reliability? • Has the instrument been checked for any kind of validity? • The sample size calculation is arbitrary. It should be based on reliability coefficient. ***The above Comment forwarded to PI was reviewed by PR:-*** ***Recommendation of PR:*** Approved **PGTSC Decision:** Approval ratified ***Ref. code: XV-PGTSC-IIA/P2***
10-	Clarification of research proposal entitled ***"Evaluation of plasma OREXIN-A, inflammatory cytokines and reductive stress in patients with idiopathic and atypical parkinsonism"*** submitted by Dr. Prashant Pandey, JRI, Department of Biochemistry, King George's Medical University, U.P., Lucknow vide letter no. Bio/1164/23 dated 16th March, 2023.

Previous PGTSC Comment	PI response
This is prospective cohort study.	This is a comparative cross-sectional study. Neither the patients nor the controls will be followed-up. The controls are solely for the purpose of comparison.
Define the two cohorts exclusively.	This is a comparative cross-sectional study with two groups: a. patients with idiopathic/atypical parkinsonism b. healthy controls
Identify one primary objective and classify the rest into secondary objectives.	Changes have been made accordingly in the attached copy of thesis proforma.
Convert the primary objective into research hypothesis in terms of study parameters.	Research hypothesis has been added in the attached copy of thesis proforma (on page 19)

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

Sample size calculation and statistical analysis should be in coherence with the research hypothesis.	Sample size calculation and statistical analysis is updated and is in coherence with the research hypothesis.

The above Comment forwarded to PI was reviewed by PR:-

11- Clarification of research proposal entitled ***"Combination therapy of standard antidepressant with oral ketamine as first-line therapy in late-life depression: A open-label trial"*** submitted by Dr. Shubha Joshi, SRI, Department of Geriatric Mental Health, King George's Medical University, U.P., Lucknow vide letter no. 107/DGMH/23 dated 16th March, 2023.

Previous PGTSC Comment	PI response
Sampling technique (purposive sampling) is not correct.	**The study objectives have been revised.** Objectives of the study: 1) To assess and compare the safety and efficacy of combination therapy of a standard anti-depressant and oral ketamine with the standard anti-depressant therapy alone in late-life depression. 2) To assess the association between depressive symptoms and/or treatment response and blood biomarkers in the active group and control group. **For Clarification** [Sample calculation has been done using the G-power. Considering the methodology of the protocol the test family assumed to be used is taken as F-test with repeat measure ANOVA (within–between interaction). The effect size of 0.25 and power of 0.95 is kept with a 95% confidence interval. For the two groups assessed **for 4 observations**, a total sample size of 36 is calculated (at least 18 in each group). Accordingly, considering the drop rate of 20%, the total number of patients proposed to be recruited would be 44 (22 in each group).
Sample size calculation is inconsistent to the objective of the study.	Consecutive sampling will be used.
Sample size calculation and statistical analysis should be in coherence with the research hypothesis.	The study objectives have been revised. For clarification: The sample size calculation is mentioned above.

(Shally Awasthi)
Member-Secretary, IEC

(Alok Dhawan)
Chairman, IEC

		Since we are assessing and comparing the safety and efficacy **Safety:** A side effect checklist will be applied in the active and control groups. (already mentioned in the assessment schedule) **Efficacy:** Decline in the severity rating scale for depression: HAM-D Score and GDS score. Baseline group differences will be assessed by the Independent t-test. Change in severity Scores over time will be assessed by Repeat Measure ANOVA.

14- Clarification of research proposal entitled ***"A comparative analysis of extra hepatic biliary system anatomy during laparoscopic cholecystectomy with and with and without biliary mapping using methylene blue"*** submitted by Dr. Ravendra Kumar, JRI, Department of General Surgery, King George's Medical University, U.P., Lucknow vide letter no. 3604/ 23 dated 31st March, 2023.

Previous PGTSC Comment	PI response
Is use of Methyline blue a standard procedure for intra operative	Methylene blue(MB) is a diaminophenothiazine with a long history of clinical use due to its minimal side effect profiles. MB currently is used for treatment of methemoglobinemia, carbon monoxide poisoning, and vasoplegic syndrome as well as for surgical staining. MB could diffuse rapidly into brain and accumulate in the cytoplasm and mitochondria of neurons. In recent years its role as a mitochondrial protective agent has elicited much of its renewed interest, especially, studies have shown that MB has established its neuroprotective effects against ischemic stroke, post-chemotherapy-induced Encephalopathy and neurodegenerative diseases caused by Alzheimer's disease(AD) and psychoses. To date, there is no trials have examined the role of intraoperative MB administration in prevention of POD and POCD in elderly patients undergoing non-cardiac surgery, who have preoperative normal neurocognitive function. It 's an entirely novel therapy for postoperative neurocognitive disorders and will have high clinical translatable value if this intervention is found to be beneficial.
The review of literature mentions that in difficult laparoscopic cases methyene tracking of EBA is helpful with positive outcome. Kindly justify the need of study.	Attached separately

II-A New Thesis-Resident

1. Research proposal entitled ***"Endocapsular multi-chop vs standard four quadrant chop: per-randomized controlled trial comparing per-operative ultrasound energy used, per-operative complications and postoperative corneal parameters"*** submitted by Dr. Tapan, JRI, Department of Ophthalmology, King George's Medical University, U.P., Lucknow vide letter no. 1501/OP/23 dated 15th February, 2023.

Recommendation of PR:

- The fundamentals of performing RCT are not completely Specified:
- Method of randomization , follow-up, outcome event efficacy or effectiveness trial not clear
- Statistical and methodological issues in RCT missing.

	• Sample size calculation is not clear. It should be done after properly defining the research hypothesis in term of the study population parameter. **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit. Give changes done in a tabular form. ***Ref. code: XVII-PGTSC-IIA/P1***
2.	Research proposal entitled ***"Role of diet and lifestyle in colorectal cancer (CRC)-A case control study in Lucknow"*** submitted by Dr. Christopher James, JRI, Department of Community Medicine & Public Health, King George's Medical University, U.P., Lucknow vide letter no. 1314/CM/23 dated 9th March, 2023. ***Recommendation of PR:*** • Identify one primary objective, the rest should be put into secondary objectives. • Convert the primary objectives into a proper research hypothesis using the parameters of the study population. • The sample size is arbitrary. Mention the formula used. • How the cases will be matched with controls? • What will be the ratio of matching (1:1 or 1:K)? • The statistical analysis will be for matched study **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit. Give changes done in a tabular form. ***Ref. code: XVII-PGTSC-IIA/P2***
3.	Research proposal entitled ***"Randomised controlled trial comparing standard treatment of obstructive sleep apnoea to add-on acetazolamide treatment"*** submitted by Dr. Anurag Ambika Prasad Tripathi, SR, Department of Pulmonary & Critical Care Medicine, King George's Medical University, U.P., Lucknow vide letter no. 551/PCCM/2023 dated 15th March, 2023. ***Recommendation of PR:*** • The fundamentals of performing RCT are not completely Specified. • Random allocation to treatment not given. • Method of randomization not given. • Blinding or masking not given. • Blind assessment of outcome not given. • Loss to follow-up data. How it will be done. • Efficacy or effectiveness trial. Please clarify. • Statistical and methodological issues in RCT. • Sample size calculation is not clear. It should be done after properly defining the research hypothesis in term of the study population parameter. **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit. Give changes done in a tabular form.

4.	Research proposal entitled ***"Predictors of successful weaning and extubation of critically-ill patients on invasive mechanical ventilator"*** submitted by Dr. Mrityunjaya Singh, SR, Department of Pulmonary & Critical Care Medicine, King George's Medical University, U.P., Lucknow vide letter no. 552/PCCM/2023 dated 15th March, 2023. ***Recommendation of PR:*** • Identify one primary objective, and the rest should be grouped into secondary objectives. • Convert the primary hypothesis into a proper research hypothesis in terms of the study population parameters. • This study seems to be developing a "predictor" model. • There are certain guidelines for developing such model. You should cite those here. • The sample size calculation is missing. There is a proper formula for this. Presently it is very arbitrary. • Statistical analysis should be given in detail for developing prediction model. • In Study period (Patient enrolment: 1.5 minimum tentative) is not clear. Kindly explain. **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit. Give changes done in a tabular form.
	Ref. code: XVII-PGTSC-IIA/P4
5.	Research proposal entitled ***"Histological evaluation of pulpal response at varying remaining dentin thickness in teeth restored with various restorative materials: An ex vivo study"*** submitted by Dr. Ankita Agarwal, JRI, Department of Conservative Dentistry & Endodontics, Faculty of Dental Sciences, King George's Medical University, U.P., Lucknow vide letter no. 614/Cons & Endo/2023 dated 17th March, 2023. ***Recommendation of PR:*** • Identify one primary objective. • In the present form objectives are ambiguous. The outcome event for evaluation of the pulp dentin complex should be clearly identified. • The primary objective should be converted into proper research hypothesis in terms of the study population parameters. • Sample size calculation and statistical analysis section are missing. **PGTSC Comment:** As above **PGTSC Decision:** Revise & Re-submit. Give changes done in a tabular form.
