On contact with blood, QuikClot® accelerates the natural clotting cascade by activating factor XI in the Intrinsic Pathway, which in turn accelerates the body's natural clotting ability leading to robust clot formation and faster bleeding control. Kaolin in QuikClot® does not alter the natural ability of the body to stop the clotting process when hemostasis is obtained. QuikClot® hemostatic products can handle all types of bleeds including interventional patients who are anticoagulated- 10cm x 10cm, & 7.5cm x 1.2m	OD
